

## A new small computer that won't limit you tomorrow

New Cromemco System One shown with our high-capability terminal and printer.

**Expandability** 

Here's a low-priced computer that won't run out of memory capacity or expandability halfway through your project.

Typically, computer usage tends to grow, requiring more capability, more memory, more storage. Without a lot of capability and expandability, your computer can be obsolete from the start.

The new System One is a real building-block machine. It has capability and expandability by the carload.

Look at these features:

- **Z80-A processor**
- 64K of RAM
- 780K of disk storage
- CRT and printer interfaces
- Eight S-100 card slots, allowing expansion with
  - color graphics
  - additional memory
  - additional interfaces for telecommunications, data acquisition, etc.
- Small size

## **GENEROUS DISK STORAGE**

The 780K of disk storage in the System One Model CS-1 is much greater than what is typically available in small computers. But here, too, you have a choice since a second version, Model CS-1H, has a 5" Winchester drive that gives you 5 megabytes of disk storage.

## MULTI-USER, MULTI-TASKING CAPABILITY

Believe it or not, this new computer even offers multi-user capability when used with our advanced CROMIX\* operating system option. Not only does this outstanding O/S support multiple users on this computer but does so with powerful features like multi-

ple directories, file protection and record level lock. CROMIX lets you run multiple jobs as well.

In addition to our highly-acclaimed CROMIX, there is our CDOS\*. This is an enhanced CP/M\* type system designed for single-user applications. CP/M and a wealth of CP/M-compatible software are also available for the new System One through third-party vendors.

## COLOR GRAPHICS/WORD PROCESSING

This small computer even gives you the option of outstanding high-resolution color graphics with our Model SDI interface and two-port RAM cards.

Then there's our tremendously wide range of Cromemco software including packages for word processing, business, and much more, all usable with the new System One.

## ANTI-OBSOLESCENCE/LOW-PRICED

As you can see, the new One offers you a lot of performance. It's obviously designed with antiobsolescence in mind.

What's more, it's priced at only \$3,995. That's considerably less than many machines with much less capability. And it's not that much more than many machines that have little or nothing in the way of expandability.

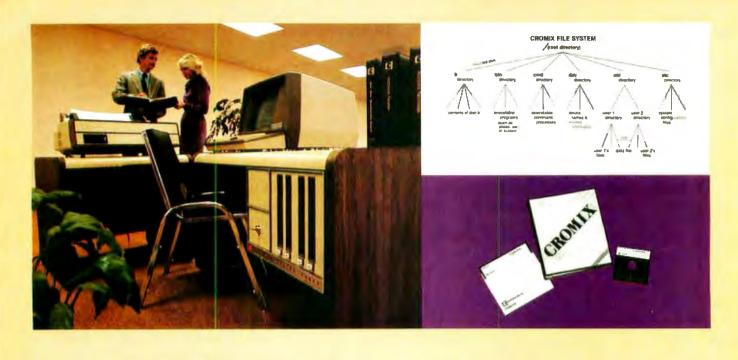

Physically, the One is small — 7" high. And it's allmetal in construction. It's only 14%" wide, ideal for desk top use. A rack mount-option is also available.

## CONTACT YOUR REP NOW

Get all the details on this important building-block computer. Get in touch with your Cromemco rep now. He'll show you how the new System One can grow with your task.

\*CROMIX and CDOS are trademarks of Cromemoo Inc. †CP/M is a trademark of Digital Research

## CROMIX\*— Cromemco's outstanding UNIX†—like operating system

CROMIX is just the kind of major development you've come to expect from Cromemco. After all, we're already well-known for the most respected software in the microcomputer field.

And now we've come up with the industry's first UNIX-lookalike for microcomputers. It's a tried and proven operating system. It's available on both 5" and 8" diskettes for Cromemco systems with 128K or more of memory.

Here are just some of the features you get in this powerful Cromemco system:

- Multi-user and multi-tasking capability
- Hierarchical directories
- Completely compatible file, device, and interprocess I/O
- Extensive subsystem support

## **FILE SYSTEM**

One of the important features of our CROMIX is its file system comprised of hierarchical directories. It's a tree structure of three types of files: data files,

\*CROMIX is a trademark of Cromemco, Inc. †UNIX is a trademark of Bell Telephone Laboratories directories, and device files. File, device, and interprocess I/O are compatible among these file types (input and output may be redirected interchangeably from and to any source or destination).

The tree structure allows different directories to be maintained for different users or functions with no chance of conflict.

## PROTECTED FILES

Because of the hierarchical structure of the file system, CROMIX maintains separate ownership of every file and directory. All files can thus be protected from access by other users of the system. In fact, each file is protected by four separate access privileges in each of the three user categories.

## TREMENDOUS ADDRESS SPACE, FAST ACCESS

The flexible file system and generalized disk structure of CROMIX give a disk address space in excess of one gigabyte per volume — file size is limited only by available disk capacity.

Speed of access to disk files has also been optimized. Average access speeds far surpass any yet implemented on microcomputers.

## 'C' COMPILER AVAILABLE, TOO

Cromemco offers a wide range of languages that operate under CROMIX. These include a high-level command process language and extensive subsystem support such as COBOL, FORTRAN IV, RATFOR, LISP, and 32K and 16K BASICS.

There is even our highly-acclaimed 'C' compiler which allows a programmer fingertip access to CROMIX system calls.

## THE STANDARD O-S FOR THE FUTURE

The power and breadth of its features make CROMIX the standard for the next generation of microcomputer operating systems.

And yet it is available for a surprisingly low \$595.

The thing to do is to get all this capability working for you now. Get in touch with your Cromemco rep today.

Volume 8, Number 3 March 1982

## Features

40 Four New Products from Radio Shack by Chris Morgan / New developments from Radio Shack include some surprises.

50 Use Voiceprints to Analyze Speech by Steve Ciarcia / The first step in designing a speech-recognition system is analyzing the spectral content of speech.

80 The Atari Tutorial, Part 7: Sound by Bob Fraser / The Atan 400 and 800 computers can generate a vanety of noises.

100 Build a Half-year Clock for the Color Computer by William Barden Jr. I The inexpensive and accurate half-year clock can be easily interfaced to a Radio Shack Color Computer.

126 The Input/Output Primer, Part 2: Interrupts and Direct Memory Access by Steve Leibson / Second in a series that explains the way in which computers talk with the world.

142 A BASIC Plotting Subroutine, Sophisticated Plotting with Your MX-80 by Lawrence J. Bregoli / Simple software routines let the Epson MX-80 emulate sophisticated plotters.

158 Modify Your Paper Tiger for Different Paper Thicknesses by R. P. Sarna I A simple modification increases the versablity of your printer.

198 Custom and Standardized Forms for the Microcomputer User by Philip Lemmons I A number of companies stand ready to help you with various stock, custom, or standardized forms.

218 The Fill Forms System, CP/M Programs to Cut Down on Paperwork by Bill Roch / Use your computer to fill in standardized forms.

248 Lowercase Descenders for the Epson MX-70 by Bruce Piggott / Get true lowercase descenders and program your own special characters.

278 BYTE Printer Directory by Curtis P. Feigel / A listing of printer manufacturers and their products.

456 The Computer Toolbox by Mark Bernstein / The modularity of FORTH gives laboratory computers portability and flexibility

466 Skip Sequential: A New File Structure for Microcomputers by Jack Purdum I An interesting technique for North Star and Microsoft BASICs combines the speed of random-access disk files with the space-saving advantages of sequential-access files.

## In This Issue

Hard copy was once considered a luxury by computer hobbyists, but now the ability to record program listings and text on paper is seen as almost a necessity. And though you're not likely to find a printer like the one Robert Tinney pictured on this month's cover, you're sure to find one from the many available that will fit your needs. For a rundown on what's around, see Curtis Feigel's printer directory. For a look at a new approach to printers, see Ed Umlor's review of the Prism Printer. We've also included a report on custom and standardized forms: where to get them and how to use them. And we have an article on programming your computer to fill in forms.

The Atari Tutorial continues with Part 7: Sound; William Barden Jr. discusses building a half-year clock for the Color Computer in the fourth article in his series on Radio Shack computers; in Part 2 of the "Input/Output Primer" Steve Leibson discusses interrupts and direct memory access; and Steve Ciarcia writes about using voiceprints to analyze speech. Don't miss our quarterly games feature, "BYTE's Arcade," plus our regular items and reviews.

## Editorial

## The Microprocessor's Tenth Birthday

by Chris Morgan, Editor in Chief

", . . Intel introduces an integrated CPU complete with a 4-bit parallel adder, sixteen 4-bit registers, an accumulator, and a push-down stack on one chip. It's one of a family of four new ICs which comprise the MCS-4 microcomputer system—the first system to bring you the power and flexibility of a dedicated general-purpose computer at low cost in as few as two dual in-line packages . . . "

> -from the first microprocessor advertisement in the November 15, 1971 issue of Electronic News

It's hard to believe, but the microprocessor celebrated its tenth birthday this past November. The event slipped by with little comment from the technical press. We nearly missed it ourselves in the rush to keep up to date in an industry that refuses to slow down and wait for anyone. Nevertheless, it's staggering to realize that ten years have gone by since the calculating powers of the computer were first squeezed onto a small square of silicon. The first microcomputer was actually a family of four integrated circuits known collectively as the "MCS-4 system." It consisted of the 4004 CPU (central processing unit) that featured a set of 45 instructions, the 4001 ROM, the 4002 RAM, and the 4003 shift register.

Ironically, it was a Japanese calculator company called Busicom (now out of business) that spurred the creation of the microprocessor. As Ted Hoff Ir., in-

ventor of the 4004, put it, "The development came as all good ideas do. I looked at a customer's proposed design and said, There ought to be a better way."

The "better way" came about in 1971 when Busicom contracted the newly formed Intel company to develop a family of integrated circuits that Busicom could use in a proposed line of programmable calculators. The Japanese company had already designed the calculator with about a dozen proposed MOS chips, and it wanted Intel to complete the design. Intel had only two designers at the time, though, and probably would have been hard pressed to design the chips quickly enough if it had not been for Hoff's inspiration. It was all related to Hoff's admiration for the architecture of DEC's PDP-8, a mini-

Ted Hoff Jr., inventor of the 4004.

## PROFESSIONAL PASCAL

# Pascal/Z

## SYMBOLIC DEBUGGER

This fourth generation version of our reliable, Z-80 native code compiler adds the two features professionals ask for:

- ◆ SWAT™—an interactive symbolic Pascal debugger that allows easy error detection.
- ◆ Overlays—that allow larger programs to run in limited memory.

## A compiler for Professional programmers

Pascal/Z is a true Pascal. It closely follows the Jensen and Wirth standard with a minimum of extensions designed to aid the serious program developer in producing extremely compact, bug-free code that runs FAST.

Pascal/Z generates Z-80 native code that is ROMable and Re-entrant. Permits separate compilation, direct file access, external routines and includes a relocating macro assembler and Microsoft compatible linker. And code written for Pascal/Z is fully compatible with I-PAS 8000, our new native code Pascal compiler for Z-8000, to guarantee graceful migration to 16 bit operation.

## Get "The FACTS about Pascal"

Confused about which Pascal to buy?

Pseudo-code... Native code... M, MT or

Z? Compare the unbiased benchmarks

## Editorial\_

computer he had been using for some time. "The PDP-8 was a nice machine: simple, yet it could do a lot. I looked at the PDP-8, I looked at the proposed Busicom, and I wondered why the calculator should be so much more complex." Busicom was initially uninterested in the proposed microprocessor. Nevertheless, Hoff's supervisors encouraged him to continue with the design, and Busicom finally relented.

As it turned out, the final configuration of the 4004 in the Busicom calculator was "pretty exotic," as 4004 design team member Stan Mazor describes it. "Shima Masutashi [another member of the 4004 design team who was later to design the 8080] and I worked on the design of the calculator. He wrote a 19-byte interpreter in MCS-4 machine code for the calculator. It performed the relatively trivial task of fetching the next pseudo-byte and jumping to a subroutine. I laughed when I realized that what we had inside the desk calculator was a computer programmed as an interpreter emulating a pseudo-language."

Intel didn't realize at first what it had. An article in a recent issue of Intel's house magazine, *Solutions*, points out that "Intel's own board of directors could not agree on whether to proceed with the sale of the 4004. Their resistance was underscored by the company's marketing department which, based on the belief that microprocessors would only be sold as minicomputer replacements, initially estimated the entire worldwide market at only a few thousand units per year." Today, as we all know, Intel's initial sales estimate was off by several orders of magnitude.

Situations like this are not uncommon in the technical world. A similar situation occurred at the Philadelphia Centennial Exposition of 1876. In a small pavilion at the fair, Alexander Graham Bell exhibited his newly invented telephone to a moderate number of politely interested people. Down the midway, though, thousands lined up to view the real technological hit of the show: the Corliss Steam Engine. I'll refrain from saying which of these two gadgets ultimately became a household item. But 1 will say that 1 don't have a princess model Corliss Steam Engine in my den.

Of course the microprocessor ultimately "made it" too, and it continues to affect our lives every day. The personal computer simply would not exist today without the microprocessor. In fact, it created a revolution. In his book *Promise of Power*, Carl Stokes said, "When you start dealing with change you are talking about interfering with those who are in possession of something." This concept doesn't apply to the microprocessor revolution, though, because microprocessors do not deny anything to anyone. Instead, they offer everyone a new tabula rasa. Not even the mainframe computer companies really suffered when the microprocessor appeared: they simply regrouped and continued marching (although it took some of them a long time to do it, and some of them haven't started yet).

## JOHN STARKWEATHER'S

**DISKETTE AND MANUAL** 

For all CP/M systems. Works with Apple (softcard need-ed), TRS-80, North Star, Superbrain, Micropolis, Vector and

many other microcomputers. Needs 32K RAM, one disk drive and CRT or video display and keyboard.

PILOT for Programmed, Inquiry, Learning Or Teaching.

An excellent interactive language for education and office automation. Perfect companion for BASIC, COBOL and PASCAL to solve training and

documentation problems.

. John Starkweather, Ph.D., creator of PILOT, wrote this version to meet all PILOT-73 standards and added many new features. · New features include full screan text editor, commands to drive

optional equipment such as VTR's & voice response units. Currently used in many college and progressive high schools

Use for interactive applications—data entry, programmed instruction and testing.

DISKETTE AND MANUAL

For all CP/M-based systems, Requires 32K RAM, one disk drive and CRT or video display and keyboard.

A character oriented full screen video display text editor designed

specifically for program preparation.

Write program in COBOL, FORTRAN, BASIC or similar languages.

 Features include single key commands for cursor control, scrolling, block moves, search and replace, tab setting and multiple file insertions.

DISKETTE AND MANUAL

For all CP/M or MP/M operating systems. Requires 32K RAM and one disk drive.

Edition II of Nevada COBOL is based on ANSI-74 Standards.

With 48K RAM, you can compile and execute up to 4000 state-

COPY statement for library handling.

## Editorial.

Smith-Corona's new letter-quality printer, the TP-1.

We congratulate Intel on the tenth anniversary of the fortuitous invention that made personal computing possible, and we look forward to the day in 1992 when we can examine the second decade of the microprocessor.

## An \$895 Daisy-Wheel Printer

This month's theme is printers, and the most exciting news in the fast-changing printer market is undoubtedly Smith-Corona's new \$895 (suggested retail) letter-quality printer, the TP-1. It features a plastic daisy wheel plus either an RS-232C serial interface or a Centronics-style parallel interface. Maximum speed of the TP-1 is between 14 and 15 characters per second, but the average speed is closer to 12 characters per second.

Smith-Corona makes no apologies for the fact that the TP-1 is a bare-bones system, and even though it lacks such niceties as proportional spacing, double-striking capability, and bidirectional printing, it's still a bargain. Price-wise, its closest competitor is in the \$1500 range. The American-made unit accepts letter or legal-sized paper, and, in a new version, will soon be able to handle fanfold paper. The TP-1 has some competition in the form of add-on boards that convert the Olivetti Praxis typewriter into a letter-quality printer. They're manufactured by Vertical Data Systems Inc., Mississauga, Ontario, Canada (Converter TP35); Williams Laboratories, Ithaca, New York (Bytewriter); and Systemed Corporation, Mountain City, Tennessee (Typrinter). We plan to review these units as soon as possible, for they herald the beginning of a new age of affordable word-processing computer systems.

## Acknowledgments

Thanks to Donna Shuster and Intel for permission to reprint quotes and comments from the article "Tenth Anniversary of the Microprocessor" in the November/December 1981 issue of Solutions.

## S-100 Fast-Aid.

## Including 3 new boards for system design relief.

## The MB64.

An economical, highperformance 64K static RAM memory.

Just what the doctor ordered. A new 64K static RAM configured as two 32K blocks that's fast (in excess of 6MHz), reliable and economical. The MB64 supports IEEE 696/S-100 24-bit extended addressing for up to 16MB of RAM. Bank switching permits compatibility with popular multi-user computer systems (such as CROMIX\*). Up to 8K can be replaced with 2716 EPROMs. The MB64 offers low power consumption (typically less than 600 milliamps). And a provision for optional battery backup.

(The MB64 is priced at less than \$850.)

\*CROMIX is a trademark of Cromemoo, Inc.

## The 108.

An I/O board featuring eight serial interfaces, individually programmable baud rates, and an interrupt clock.

Give your system fast-aid-including easier testing and speedier diagnosis—with SSM's new IO8. This board features eight asynchronous serial RS-232 I/O ports with LED data transfer indicators. Individually programmable I/O port baud rates (110-19,200) meet all your specific configuration requirements. A timer (50/60 Hz) supports real-time or multi-user applications.

## And all our Fast-Aid boards offer:

- · Card ejectors for painless card removal.
- LEDs for easy troubleshooting and monitoring.

## The 105.

A two-serial/three-parallel I/O board with programmable timer.

The perfect remedy for fast system integration, more precise diagnosis, and far healthier system operation. The IO5 features two RS-232 asynchronous serial interfaces for maximum peripheral compatibility. The board supports a variety of devices with high-speed serial data transmission (110-19,200 baud). Three parallel ports, providing a total of 32 bits, support various I/O configurations: a 16-bit software programmable bi-directional interface, and two 8-bit interfaces. One 8-bit interface supports direct connection to Centronicscompatible printers. The other provides 8 bits of parallel input for such devices as keyboards. The IO5 also offers a softwareprogrammable timer for real-time or multi-user applications.

For more details about these new boards, or any of SSM's S-100 compatible boards (including various CPU, EPROM, video and your local dealer or SSM today.

# The disk drive that puts more byte into your Apple.

## Introducing the first totally compatible Floppy Disk Drive.

Rana Systems has designed a totally compatible disk drive for Apple, that's better than Apple's. A high density, high capacity disk drive and controller that offers a myriad of features Apple never thought of. Unique advantages that get the maximum efficiency out of your existing Apple II® hardware and software.

At Rana, we knew you wanted more storage, so we went right to the core of the problem. Even our most economical model is designed to give you 15% more storage capacity than Apple's. Our top-of-the-line unit gives

you 4 times the capacity of Apple's comparable unit. Even our design is far more dramatic than theirs. With lines that actually complement the sleek Apple II computer.

## We're a step ahead of Apple because we have a faster step.

Holding more information is even more valuable when you can get it faster. The Rana System track positioning mechanism is engineered to access three to four times faster track to track, with greater accuracy than Apple's. Our disk drive offers safeguards like a stall provision to protect spin motor burnout,

an advanced write protect feature that keeps your information where you put it, and an energy saving device that "powers down" when your disk drive is taking a break.

## We even took a bite out of Apple's price.

Our most popular model is 25% more economical per byte than Apple's, providing you with maximum performance, superior cost efficiency, and totally compatible styling. It also comes with a free diskette containing all the optional software and supports you'll need to enhance the capacity and performance. And it's all backed up with an efficient service

support system, and a full 90 day warranty.

The Rana System Floppy Disk Drive. Just plug it into your Apple and all those delicious

extra bytes will be yours.

## **Apple's Decision Questioned**

We use Apple computers for commercial machine-language program development and buy Apple IIs at frequent intervals, either as a service to our customers or in order to expand our office.

I have recently spoken to a mail-order distributor of Apples who told me that as of December 4, 1981. Apple was no longer wholesaling to mail-order houses. I could not believe this, so I called CALL-A.P.P.L.E. It's true, I was told.

I am outraged. How can Apple, with new, large, clever, powerful competitors just beginning to breathe down its neck, remove the only way for small, intelligent users to buy Apples inexpensively?

Apple is, in effect, forcing us to buy from retail stores, which are usually overpriced. Their personnel are insulting in their inexperience and knowledgeable only about the latest space games. We can not afford their arbitrary \$700 markup on the Apple II. Our software systems, while cost-effective with mail-order firms' prices, are not with the retail stores'

Apple will have to decide just who its friends are-the retailer who sits on his duff selling other people's ideas or the software innovator who takes a piece of hardware and makes it usable by the masses. While Apple may be trying to help out its dealers, it seems to have decided to do this at the expense of its serious customers-the people on whose success its own utlimate success depends.

Apple has succeeded so far because it provides a product which we (and others) can program without too much trouble and which our customers can afford. This new attitude of demanding that we submit to retailers' ridiculous prices will compel many to reconsider which personal computer we will use to develop our systems. I hope Apple discovers its error before its competitors profit too much from it.

Dennis Gerald Pratt 666 North Dearborn, Apt 3F Chicago, IL 60610

Yes, it is true. Apple Computer Inc. has given its dealers an ultimatum; either cease all mail and phone order sales, or your authorized dealership will be terminated effective December 4, 1981. This

was delivered in a "Notice of Dealer Agreement Modification" November 2, 1981, and dealers had until November 20, 1981, to sign and return the "modification." Otherwise, Apple threatened to pull the plug, so to speak.

Apple is attempting to justify this move by stating: "We believe that our ability to maintain a leadership position in competition with the corporate giants now entering the personal computer field depends in large measure on the willingness of our dealers to satisfy the end user with their familiarity with Apple products and their commitment to passing on this knowledge and support." Accordingly, Apple has added subparagraph 3 (g)(iv) to its Authorized Dealer Sales Agreement: "Dealer and Apple recognize that because of the special, technical nature of Apple Products, customers purchasing them can be properly served only if they have the benefit of pre- and post-sale education. orientation and support, specifically including in-person contact with the selling dealer, in order that each customer's needs may be properly served and the features, benefits, operation and applications of the Apple Products being purchased may be demonstrated and fully explained by knowledgeable sales personnel." It then goes on to specifically prohibit mail and telephone order sales of Apple products under penalty of losing the dealership.

Apple concluded its modification notice with the following paragraph:

"Apple personal computer products demand innovative and creative marketing. We are willing to work with all who are willing to meet that challenge. Those who are unwilling to expend the effort have no place in our future plans," . . . MH

## Is Microfiche the Answer?

This letter is in response to the letter of Lew Merrick (October 1981 BYTE, page 10) regarding the storage bulk of advertising material in BYTE back issues.

The separation of advertising material into a separate removable section is undesirable because it would reduce the exposure of the advertising, reduce the value of the advertising, and ultimately degrade the quality of BYTE by reducing revenues.

An alternative is to convert to microfiche files at some loss of convenience but

great savings in space. BYTE is now available from University Microfilms, Ann Arbor, Michigan, but you must be very patient with them because (1) back issues are available only in one-year blocks. (2) back issues are not produced until well into the following year, and (3) orders are not filled promptly.

My suggestion is that BYTE offer a microfiche subscription option, just as is now done with the IEEE journals. The microfiche might actually be cheaper to produce and ship than the paper edition,

A microfiche viewer can be used for many purposes and occupies about as much space as three years of BYTE. The space needed to store the fiche is negligi-

Back issues of BYTE are well worth preserving, as they enable me, after a session on my modest micro, to ponder what little was available only five years ago and to speculate what the future holds. The advertisements in a five-year-old BYTE issue contain some very interesting material.

Richard Schwartz **Electrical Engineer** Star Fleet Engineering 1328 North Santa Anita Ave Arcadia, CA 91006

### More on the WAI

Regarding Dr. S. S. Reddi's "Where Am I?" instruction (Technical Forum. November 1981 BYTE, page 413), I would like to point out that Motorola's 6809 has such an instruction. The simplest form is:

> TFR PC.X

The instruction transfers the value in PC (program counter) to register X. (The value transferred is the location of the next instruction.) The 6809 also allows:

> LEAX n.PC

which adds "n" (8 or 16 bits) to PC and puts the result in register X. (LEA = Load Effective Address) This instruction, which may also be written:

> LEAX label, PCR

can compute the address of any label (location) within the program without using an absolute address (PCR means use

## New Microbuffer II lets you use your printer without tying up your computer.

Time. As an important resource it shouldn't be wasted. One such waste is in printing, where your computer must wait for your printer. Now there's a way to eliminate this waste.

Introducing the Microbuffer I<sup>™</sup>, a buffered parallel printer interface for the Apple It computer with 16K characters of memory (user expandable to 32K). It accepts data as fast as your computer can send it, allowing you to use your computer while the Microbuffer I is in control of your printing.

The Microbuffer II, compatible

with Applesoft, CP/M\* and Pascal, comes with complete print formatting features as well as advanced graphics dump routines for most popular graphics printers.

The Snapshot™ option permits you to dump the text screen or graphics picture to the printer while any program is

**MICROBUFFER II** 

running — without interuption.

The 16K Microbuffer I is available for \$259. And the 32K version, for \$299. The Snapshot option is \$69.

So why waste time while your computer waits for your printer? Ask your computer dealer for the Microbuffer II or call us for the name of a dealer near you.

Microbulter II and Snapshot are trademarks of Practical Peripherals, Inc.

CPIM is a registered trademark of Digital Research, Inc. Apple I is a registered trademark of Apple Computer.

Circle 316 on inquiry card.

PC-relative addressing). In these examples, the destination register could be Y, U, or S, instead of X, if desired. The destination for the TFR instruction could also be register D, which is accumulators A and B treated as one 16-bit register.

I question the usefulness of a WAI (Where Am I) instruction by itself, however. Apparently, Dr. Reddi would like to get the value of the 6502's program counter and then use this value to set up a table of addresses in page zero of memory, to be used with page zero indirect addressing (or, I shudder, to modify addresses within his program, such as jump and subroutine addresses). Adding a WAI instruction to the 6502 would help, slightly, with this rather clumsy method of making programs relocatable.

Much more is needed to make programs easily relocatable. The ideal situation would be to have code that runs at any address with no changes required. This is called position-independent code. The 6809 has the necessary instructions for such code. In addition to the LEAX (and LEAY, etc.) mentioned above, its instruction set includes branches (jumps), both conditional and unconditional, and subroutine calls with relative addressing. The relative address can be either 8 or 16 bits long, the latter allowing relative addressing anywhere within the 6809's address space. (Subroutine calls and unconditional jumps are also available with absolute addressing.) The presence of these instructions allows writing programs that can be run at any address with no changes (and with no need to set up a table of addresses or to modify the code at run time).

The WAI instruction by itself solves only a small part of the problem of being able to have position-independent code, code that will run unchanged at any address. Perhaps this is one reason it is not present in most computers. Most (or all) computers that have a WAI instruction, such as the 6809, PDP-11, 68000, and IBM 370, are also capable of position-independent code. I suspect that the 8086, Z-8000, and VAX 11/780 are also in this category.

Another reason for the absence of WAI in most microcomputers is that most 8-bit microprocessors were intended for use in dedicated controllers where there is no need for position independence or a WAI instruction.

One may note that the 6800 has a WAI instruction, namely:

BSR NEXT NEXT EQU \$ This use of BSR (branch to subroutine), which uses relative addressing, pushes the address of the next instruction onto the stack, where it can be easily retrieved. (This is not to be confused with the 6800 instruction whose mnemonic is WAI. This WAI means "wait for interrupt.")

Jim Howell 5472 Playa Del Rey San Jose, CA 95123

The "Where Am I?" instruction is indeed useful. That is probably why it was included in the design of the Motorola 6809 as the Load Effective Address, or LEA, instruction, and its use is not restricted to finding the current PC contents.

The LEA instruction loads the effective address of its operand into the specified 16-bit register, which may be either stack, either index, or the double accumulator. The operand must use the indexed addressing mode, which includes PC-relative, "Where am I?" could be coded:

HERE LEAX HERE,PCR

Assuming that you want HERE to be in the X register.

Other uses for the LEA instruction are addressing position-independent tables and adding constants to the indexable registers.

I recently read an article comparing the 6502 and the 6809 in which the author complained that he wasn't able to find much use for the LEA instruction. This caused some amusement among my friends. A close examination of some of my own code reveals that the LEA instruction is one of the most heavily used, I would venture the opinion that position-independent code would be much more difficult to write without it.

Howard Lee Harkness Word's Worth POB 28954 Dallas, TX 75228

## **Architecture Controversy**

It was nice to see your article on higherlevel machine-language constructs, "Should the DO Loop Become an Assembly-Language Construct?" by Glenn L. Williams (October 1981 BYTE, page 413). I would like to add a couple of comments to Mr. Williams's remarks.

Since Mr. Williams was including minicomputers in his article (he references the PDP-11 and VAX 11/780) he might also have included a reference to the HP3000 instructions MTBA, MTBX, TBA, and TBX. These four instructions each perform a variation of Mr. Williams's NXT function. All the instructions use a loop variable, a limit value, and a step value. TBA and MTBA use a variable address on the stack while TBX and MTBX use the index register for the loop variable. In all cases, the limit and step values are on the stack, MTBA and MTBX modify the variable by the step value, which may be any integer, positive or negative, and compare the result to the limit value. Positive step values cause a check to see if the limit has been exceeded, and negative step values cause the check to see if the result is less than the limit, TBA and TBX do not modify the variable but check only for the limit being exceeded. These allow compilers to implement more complex counting-loop structures than can be accomplished by adding or subtracting a step size. Also, functions similar to Mr. Williams's SRCH function are performed by SCU (SCan Until memory byte matches test byte or terminal byte) and SCW (SCan While memory byte matches test byte or until terminal byte is found) on character strings.

With the growing acceptance of modular, structured programming it has long been my feeling that high-level constructs should be imposed at the machineinstruction level. The only real need for assembly language these days is to utilize the machine architecture not available at the high-level-language level to produce quick, short code, Implementing highlevel functions in machine language and providing optimizing compilers should just about eliminate any need for assembly language. Code produced would be very short and quick, because a single complex machine instruction should run faster than the many simpler instructions put together needed to accomplish the same function, I would like to see both micro- and minicomputer processors developed with instructions to implement WHILE, IF . . , THEN . . . ELSE, CASE, DO . . . UNTIL, and other high-level constructs at the machine-instruction

Let's all keep pushing for advances in architecture to keep up with advances in software. And thanks, BYTE, for being among the leaders in this respect.

David B. Mears 757 Cornell Dr. Santa Clara, CA 95051

## Letters.

Glenn Williams is undoubtedly correct when he says that the instruction sets of microprocessors can be improved. For various reasons, however, I do not agree with his specific proposals.

It will always be necessary to write programs in assembly language, but if the "software crisis" can be solved at all it will only be by the efficient implementation of high-level languages, Processor designers have clearly realized this, but unfortunately their attempts at providing "features" that are supposed to help the compiler writer are often misguided. Consider, for example, two of the features mentioned by Mr. Williams: stack and condition registers.

There are two principal reasons for using stacks in the implementation of a highlevel language. One is to save and restore environments when procedures are called, and the other is to provide fast temporary storage during expression evaluation. Typical PUSH and POP instructions do not help in either case: to save and restore an environment we need an appropriate addressing mechanism, and expressions can be evaluated faster using registers than stacks in memory,

If we were interested only in simple testand-jump coding, condition registers would be fine, but in high-level language programming this is not always the case. The Pascal statements

finished := eof OR (lines > maximum)

and

total := total + width . length

have the same structure. On a processor with condition registers, however, the first is coded by means of an elaborate sequence of jumps, while the second is a simple sequence of arithmetic operations. There is no reason why tests should not leave their results in ordinary registers, like other instructions.

The DO statement that Mr. Williams proposes would not be used by any but the most sophisticated optimizing compiler. First, it is inappropriate for loops in which a termination test is made on entry to, rather than on exit from, the loop body. This is not required for FORTRAN, but it is for Pascal. Second, the DO stack must be adjusted if an exit occurs before the loop is completed, and that is often. whatever the structured-programming zealots say. Third, a special addressing mode is required so that the code within the loop can access the DO index, because the DO index lives in the DO stack.

The real requirements have been accurately summarized by Professor William Wulf ("Compilers and Computer Architecture," Computer, July 1981): the compiler writer wants well-designed primitive instructions, not solutions to problems. A small set of efficient, useful instructions is better than a vast number of "clever" instructions that do the right thing in special circumstances but require elaborate analysis in the general case.

Peter Grogono Metonomy Productions 4125 Beaconsfield Ave. Montreal, Ouebec H4A 2H4 Canada

## SR51A vs. HP-41C **Calculations Continued**

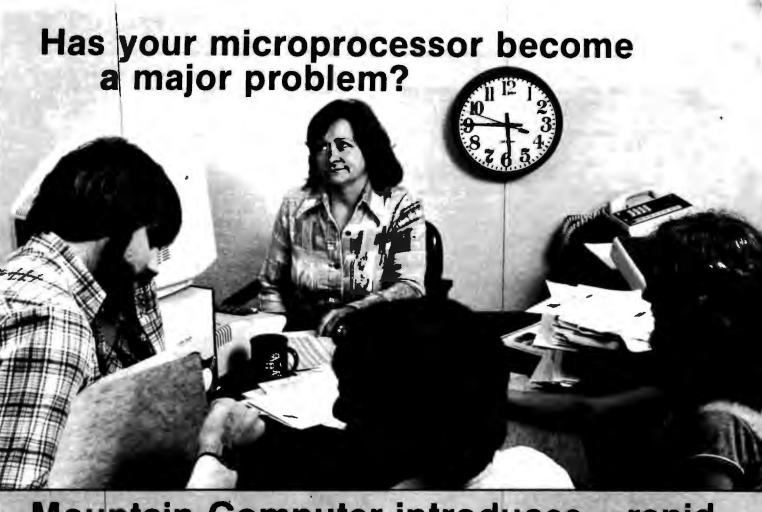

I thank Mr. Kitchen (Letters, October 1981 BYTE, page 20) for another opportunity to discuss accuracy in Hewlett-Packard calculators. I fear he missed the point; please note my earlier statement regarding predicability (Letters, April 1981 BYTE, page 16). Then try this with an SR51A or a similar calculator:

- 1. Take the square root of 2. On both your SR51A calculator and my HP-41C, the display shows 1.414213562. Square this result. You get 2; 1 get 1.999999999. Subtract 2. Neither machine yields zero, but yours looks like it will, unless you "chisel out" the hidden digits first.
- 2. Enter 1.414213562 through the keyboard, then square it. If your display reads 2, feel free to be outraged: your machine does funny arithmetic, Indeed, the SR51A does not yield 2 as a result, but, considering what happened in (1), it looks like it will. How much work are you willing to do to discover how your calculator is going to behave? If it is really a 13-digit machine, why must you trick it to reap the benefits?

I could go on. At great length, And not just about SR51s and square roots.

In some cases, the SR51A vields better results than an HP-41C. But which cases? In chain calculations, digits 11, 12, and 13 can become numerical noise that creeps into the visible mantissa, causing mysterious results whose origins are very hard to isolate.

Hewlett-Packard calculators exhibit more deterministric behavior. Accurate internal software that discards guard

Contact us or see your computer dealer today!

digits is one reason. When unavoidable numerical errors occur, they are predictable, repeatable, and immediately apparent. Serious numerical analysis demands this; braggadocio does not.

Once again: a calculator is a tool, an extension of the mind. It must be understandable and understood by the user. Consider what can happen if this is not the case for a variety of tools you may use (e.g., power saws, guns, automobiles). Then consider who uses calculators seriously, scientists, engineers, bankers, and doctors.

The designers at Hewlett-Packard keep such things firmly in mind.

## The Big Spelling Sweepstakes

The spelling-correction software review by Phil Lemmons ("Five Spelling-Correction Programs for CP/M-Based Systems," November 1981 BYTE, page 434) gives me new faith in the free-enterprise economic system of business. He has correctly pointed to the best value in a computer dictionary program: The Word from Oasis Systems.

When this program was released I compared it to the "high-priced spreads" and came to the conclusion that a big-budget ad campaign would always get results for the less-valued product. The way that various magazine editors and writers were talking up certain overpriced spellers I thought that the big dollars would win over the underfinanced little organizations, I concluded I was wrong after reading your comprehensive review.

I'm sure there's a lot of egg on many a face this day—and rightly so. There are always some individuals willing to lend their names to products they don't fully understand. Furthermore, they let their names to used without understanding the competitive positions they are taking. That seems to be a characteristic of our culture—if action is required, act even if you don't have the facts.

The time is rapidly approaching when the fast-buck artist can no longer get away with his "get-rich-quick" schemes, thanks in no small part to magazines like yours.

Frank Joseph 10925 Stonebrook Dr. Los Altos Hills, CA 94022

We wish to inform BYTE and its readers that there is a sixth spelling-correction program on the market that, according to Mr. Lemmons's benchmarks, outperforms the others. This program is called the Disc-tionary.

We ran the Disc-tionary on Mr. Lemmons's 400-word benchmark text and it found all seven misspellings, yet failed to recognize only eight additional correctly spelled words. The total time to proofread and mark the file was only 47 seconds on a typical computer when the word review feature was skipped (1:12 with word review). A 3100-word file can be proofread in 1:12 without review. While it is impossible to make direct timing comparisons due to the use of two different computers, the Disc-tionary obviously combines a high level of accuracy with a large vocabulary. This gives the user a higher level of safety and convenience than the other programs.

We believe that the Disc-tionary presently provides the best combination of speed and accuracy. It is also very easy to use because of its menu-driven operation.

The Disc-tionary requires a Z80 and is available on an 8-inch CP/M disk for \$79. This price includes a 54-page user's manual (available separately for \$15) and two free "bug fix" updates.

David G. Hicks, Vice-President Stellarsoft Corporation 841 Blanchette Dr. East Lansing, MI 48823

Editor's Note: This program has not been tested by Mr. Lemmons, The times above have been provided by the manufacturer, and we cannot vouch for their accuracy.

## An Avalanche of Answers

I have received some pretty strange and fascinating responses to a question I put to Steve Ciarcia that was printed in "Ask BYTE" (July 1981 BYTE, page 218).

Apparently, Steve didn't provide what the readers thought was the best answer and they quickly let us both know. The

## WHY SHOULD YOU PAY FOR THEIR AD SPACE??

You'll see many large mail order ads, all with the lowest price. We think that's funny because we know what those large ads cost and who has to pay for them — YOU! At Futra Company, we try to provide our customers with true value. True value to the customer is not in larger ads but in better service. Futra has sold through mail order for the past four years. Our reputation for fast delivery and courteous service has

flourished. Most of our sales are repeat customers or referrals. We're proud of that. So, why pay for their ad space? Look over the list of product lines we carry and call us when you need a quote on a specific product. Stop paying for ad space and consider true value.

Introducing the Enhancer II: a new Standard which is improving the relationship between Humans and Apples. The Enhancer II can help your Apple It's keyboard become more sociable by remembering words or phrases which can be entered into the Apple by the mere touch of a key. Life can become even easier because the Enhancer II can remember what you typed while your Apple was busy talking to your disc (or doing other things). Naturally, it knows the difference between upper and lower case letters and what shift keys are supposed to do. It even knows to auto repeat any key held down. The Enhancer II replaces the encoder board making installation simple.

Suggested retail price: \$149.00.

# THE DAWN OF A NEW ERA FOR APPLE II: THE ENHANCER II

### VIDEOTERM

The time tested Videoterm 80 column card:

- 80 characters × 24 lines
- True decenders
- 7 × 9 character resolution
- Low power consumption
- Compatible with most word processors
- Softcard and CP/M compatible
- Modern compatible
- Most popular character set of any 80 column card
- Alternate character fonts available Suggested retail price \$345.00

## SOFT VIDEO SWITCH

The Soft Video Switch is an automatic version of the popular Switchplate. It knows

whether it should display 40 or 80 columns or Apple graphics. It does the tedious work of switching videout signals so you don't have to. The Soft Video Switch can be controlled by software. Any Videoterm with Firmware 2.0 or greater may be used with the Soft Video Switch. The single wire shift mod is also supported. Package price is \$35.00.

## KEYBOARD AND DISPLAY ENHANCER

The original Keyboard and Display Enhancer is still available for Revision O-6 Apples (on which the new Enhancer If will not fit). These Apples have memory select sockets at chip locations D1, E1 & F1. The Keyboard and Display Enhancer allows entry and display of upper & lower case letters with fully functional shift keys. It does NOT have user definable keys nor a type ahead buffer. The price is \$129.00.

## **ACCESSORIES:**

Videaterm Utilities Disc \$37.00 (includes)

- Font Editor
- Pascal Mid-Res Graphics
- Applesoft Read Screen Utility
- Top & Bottom Scrolling
- Pascal Vidpatch
- Graphics Template
- Character Set EPROMs \$29.00 ea • Half Intensity
  - Inverse
  - German
  - Katakana (Japanese)
- Line Drawing Graphics (Expanded)
- Spanish
- French
- Math & Greek Symbols
- Super & Subscript

Dvorak EPROM (Enhancer) Lower Case Chio

\$29.00 \$29.00 day 1 got my magazine 1 also got a longdistance call asking if I was Dave Bower and if I owned a TRS-80 and if I had written to BYTE magazine. The caller then answered my question. The next day 1 got a letter answering the question. There's nothing strange about getting a letter, except that you didn't print my address, and neither did the person sending the letter! And it continued like that for the next couple of months—letters and phone calls from all over the United States. And just when I thought it was over I got a package from Steve Ciarcia containing the letters he had received! So, needless to say, I got my question answered. And I got a lot more too. I think every person that contacted me also shared more hints and/or information or whatever. So even though they all called or wrote me about the same thing, not one exchange was a waste of time.

I just wanted to let you know what kind of readers you have and that I think Steve has a pretty good column, and a well-read one too.

Dave Bower 741 Lake Edward Dr., Apt. 104 Virginia Beach, VA 23462

## WHY DOES OUR SPELLING CHECKER COST LESS THAN THEIRS?

Maybe we goofed by not charging more for The WORD. Our customers tell us we must be crazy, giving away this much software for only \$75.

## What's wrong with it?

Frankly, we're a fittle hurt when people ask us this question. We guess everyone must be getting used to paying \$200 to \$300 for decent software. Anything that costs less must be Junk, Right?... WRONG!!!

The WORD is not only cheaper, it's better!

## Available NOW for:

8" single CP/M\*, CDOS<sup>TM</sup>
XEROX 820 (8" only)
Intertec Superbrain<sup>TM</sup>
Apple<sup>TM</sup> with CP/M Softcard
(35.000 word declenary)
North Star<sup>TM</sup> Double/Quad with CP/M
CP/M is a registered (rademark of Ogdar Research

## The WORD gives you more!

- The WORD gives you a 45,000 word dictionary that fits into less than 140K of disk space.
- The WORD works with your favorite text editor and marks mistakes in your document for easy, in-context, correction.
- The WORD's one-louch word review lets you add new words to the dictionary with a single keypress. You can build your own custom dictionaries too!
- The WORD will look up the correct spelling of misspelled words.
- The WORD analyzes your writing, counting words and showing you how often each word was used.
- The WORD has a special homonym helper feature to deal with these pesky words.
- The WORD will find rhyming words, solve crossword puzzles, and much more!

CALL TODAY! (714) 291-9489

## Closing the Net

Harry Saal's article on local networks ("Local-Area Networks, Possibilities for Personal Computers," October 1981 BYTE, page 92) did injustice to your readers with its narrow scope and omissions. Specifically:

- Datapoint's local coaxial networkbased ARC system was introduced and installed in 1977.
- About 2000 ARCs are installed and in commerical service worldwide—more than all other networks, prototype or otherwise, combined. (I have heard no argument to estimates that Datapoint has a 95 percent market share of installed local networks.)
- Tandy uses the local network portion of ARC, ARCNET, for its TRS-80 Model II personal computer network, announced in September—a step of major significance.
- Three companies now use ARCNET— Datapoint, Inforex, and Tandy.
- The only deliverable chip-based local network interface is manufactured by Datapoint.

Considering these omissions, I'm skeptical that the article was well researched.

Gerard Cullen
Vice-President Marketing
International Operations
Datapoint Corporation
9725 Datapoint Dr.
San Antonio, TX 78284

## Harry J. Saal replies:

My article was not intended as a complete survey of local-area network products. Datapoint's offerings in the high-speed, serial, coax network were indeed quite early; it is unfortunate that Datapoint has not provided any in-depth technical information in the published literature by which its system can be evaluated for comparative study. In September 1981, several months after my article was completed, Datapoint announced its relationship with Tandy, a very exciting recent development.

Let me assure Mr. Cullen that there are substantially more than 100 installed, non-ARC local networks worldwide; hence the 95 percent market share claim is false.

## **OASIS SYSTEMS**

# The Context Connector™ Converts Any Data Directly Into VisiCalc™ Without Re-typing.

If you're one of the thousands of VisiCalc users who enter data from another computer into your VisiCalc models, the Context Connector can save you hours of work.

The Connector automatically converts text files from any computer into VisiCalc format. So you can easily move numbers from any file directly into selected VisiCalc cells.

## Load Data From Your Company Computer.

The Connector lets you convert data from your company computer directly into VisiCalc models. So you can compare actual results to VisiCalc projections. The Connector will also consolidate different VisiCalc models, an invaluable tool for 3.2 version owners.

## Analyze Stock and Commodities Prices.

The Connector converts data from timesharing services like Dow Jones into VisiCalc cells. So you can manipulate error free numbers instead of spending valuable time on typing.

## Convert Data From Any Timesharing System.

The Connector will convert data from any timesharing system into your VisiCalc models. Information from DRI, Dow Jones, The Source, Chase Econometrics, Dialog and other leading data bases can be processed by the Connector. The Connector has its own editor to let you review and edit figures prior to converting into VisiCalc.

## The Connector Also Transmits and Receives Electronic Mail.

The Context Connector also serves as a basic communications program. The Connector has an auto-dial feature to automatically call other

computers. Once on-line, the Connector can transmit standard DOS text files to any computer. The Connector can transmit and receive complete VisiCalc models. Another useful function is "save to disk" which allows you to save your electronic mail on disk for future reference.

## Specifications.

The Connector Is designed to work with the Apple II, 48K of RAM and at least one disk drive. The Connector supports both 13 and 16 sector disk versions of VisiCalc. It also works with the Apple III in emulation mode.

For data transmission, the Connector supports the D.C. Hayes Micromodem, Apple communications card or the SSM/AIO card.

## Available at Your Local Computer Store.

The Connector is available at most personal computer stores. For the name of your nearest dealer, please call or write Context Management Systems. Retailers, the Connector is available from Softsel Distributors or from Context Management Systems.

## Free Demo Disk

Send us a blank 5¼" disk and a self addressed stamped mailer and we'll return your disk with a copy of the Connector demonstration program which explains how you can use the Connector. Or if you prefer, send a check for \$4.00 made out to Context and we'll send you a new Maxell MD-15½" disk containing our demo program. Once you've seen our demo, you can delete the program and use the demo disk as you would any new blank diskette. It's a risk free way of seeing the Connector demonstrated on your Apple.

## The Growth Market & Proven Tools

The 16-bit world answers universal demands for greater performance, more address space and increased resources. This market's unprecedented growth fuels a profit-driven supply curve for software and hardware, where compatibility reigns. Our upward compatible CP/M® based family of 16-bit products, plus our commitment to our customers' success eases and speeds your entry, your conversion, to the 16-bit world of opportunities — the Digital Research world.

Single user solution: CP/M-86 leatures efficiency and power. For over a year, its dramatic user acceptance has generated impressive quantities of code. While others are just entering the market, Digital Research's CP/M-86 is already offering a broad array of languages and applications. This simplifies your conversion to 16-bit systems.

For concurrent single user applications, MP/M-86<sup>™</sup> performs simultaneous, multiple operations such as communications, printing, computation, etc. It features compact, timetested modular code. And it's available today.

In multiple computer environments, MP/M-86 lets you sell your same programs into this market segment. You solve multi-user needs with a field proven product, not a "newcomer." Increased sales of multi-user products mean more profit potential for you.

Expand to network: CP/NET-86™ interconnects multiple 16 or 8-bit systems. It allows you to expand your product's capabilities.

High level languages (over 20 languages) under CP/M-86, handily support your 16-bit applications. Our XLT86\* utility speeds conversion to 16-bit code by reducing R&D time. It makes program development and maintenance easier.

Documentation in a comprehensive set of manuals clarify your use of CP/M-86, MP/M+86 and XLT86.

## Over 2 Million CP/M-86 Units

## Software Writer Benefits The Standard Is

2,800,000 CP/M-86 based systems by 1986. This market projection identifies the type and scope of your future sales.

Independent Software Vendor (ISV) benefits from Digital Research can make you more profitable. Here's a glimpse. Call for the complete repertoire of sales and development aids.

16-bit laboratory for your use features many different 16-bit machines. This one stop development reduces the conversion time of your application or language. First to call means first to enjoy this resource, and first to start sales rolling.

ISV selling aid: Descriptive listings of your products in our ISV Compatible Software Catalog have worldwide exposure.

**IBM Display Writers and** Personal Computers running CP/M-86 guarantee a large installed base for your 16-bit products.

## **Hardware Review**

## Commodore 4022 Printer

Joseph Holmes 13049 Broadway Terrace Oakland, CA 94611

Some marriages are made in heaven—others are made in Japan. Commodore Business Machines has joined Epson to produce a fine, low-

cost printer that combines the hardware features of the Epson MX-80 with the upgraded operating system of the Commodore CBM 2022 printer. Latest in a series of new products from Commodore, the CBM 4022 will handle most printing jobs where the 8½- by 11-inch paper size and dot-matrix output are acceptable.

The 4022 is totally compatible with all Commodore 2000, 4000, and 8000 series computers. The printer requires no special interface other than a cable. The 4022 prints the entire CBM/PET character set (256 characters), which means that listings and graphics programs come out just as they were entered (see figure 1). It is controlled by an internal microprocessor, which gives the 4022 versatile line-spacing and formatting capabilities. You can design your own business forms; you can even design and print special characters. The 4022 has both a replaceable line cord and an external, easily replaceable fuse

In order to detail the other features of the CBM 4022, I will compare it to its cousin, the MX-80, and to its father, the CBM 2022.

## CBM 4022 Versus Epson MX-80

Many of the 4022's features overlap those of the MX-80. Both have a self-diagnostic print test and lowercase descenders (one-dot descenders with the 4022 and two-dot descenders with the MX-80). Line spacing defaults to 1/6 inch (six lines per inch) in the 4022 and to either 1/8, 1/6, or 7/72

## At a Glance

### Name

Commodore Business Machines Dot-Matrix Printer Model CBM 4022

### Use

TIMES

ONCE--TWICE---3

USER DESIGNED CHARACTER: @ 60 -

Figure 1: Print sample of the Commodore CBM 4022 printer showing the entire character set, reversed and enhanced print, and userdefined characters.

inch in the MX-80. The line spacing can be altered (under software control) from between 1/216 and 127/216 (0.0046 to 0.5880) inch increments on the 4022 and between 1/72 and 85/72 (0.0139 to 1.180) inch increments on the MX-80.

ENHANCED:

Characters printed by the 4022 can be enhanced (widened). This can be done several times, if desired. Print enhancement with the MX-80 means emphasized print and/or double striking; both processes make the characters closer to correspondence quality. The 4022 is a tractor-feed printer that accepts paper in 4- to 10-inch widths. The print head is disposable, has a useful life of from 50 to 100 million characters, and costs less than \$30. (Another disposable print head, which is longer

lasting and 3 decibels quieter, sells for around \$40.) The ribbon is housed in an easily changed cartridge, which needs replacing after about 3 million characters, that sells for around \$14. Otherwise, the basic internal hardware of the two machines is virtually identical.

In printers, as in marriage, compromises often must be made. In order to accommodate the versatile CBM operating system, the 4022 has missed some of the juicier features of the MX-80:

• The MX-80 prints 10 characters per inch (cpi) at 46, 73, and 105 lines per minute for 80, 40, and 20 columns, respectively. The corresponding print speeds for 10 cpi with the 4022 are 30, 50, and 80 lines per minute.

- The MX-80 has its own set of 64 block-graphic characters. (I believe, however, that these graphics are far less interesting than the Commodore graphics.)
- The MX-80 has 12 printing modes that combine four character-width sizes: normal, 10 cpi; normal double width, 5 cpi; compressed, 16.5 cpi; and compressed double width, 8.25 cpi with four print densities: standard, emphasized, double strike, and emphasized plus double strike. Epson's MX-80 prints all these combinations of print sizes and print densities-except enhanced and enhanced plus double strike for the two compressed sizes.
- The four type sizes used by the MX-80 give a range of 40 to 132 characters per 8-inch line. The CBM

Systems Group System 2800 computers. They're making people stand up and take notice.

But then Systems Group products have always appealed to those who appreciate sensible value, high performance, unmatched reliability and prompt, courteous service.

Through the years, Systems Group product acceptance in Z80 CPU, disk controller, I/O and memory boards have been the result of some very purposeful and carefully thought out engineering. Not to mention strict industrial quality production standards.

That same effort has made System Group's new family of expandable System 2800 computers what they are today. Fast, reliable and powerful.

System 2800 computer systems are designed for a single user with 64K of memory or for up to as many as six separate users with additional add-in memory. They can easily expand as your organization's needs grow.

You can handle up to 8000 customers and 24,000 inventory items in our lowest cost dual floppy model and much, much more in our 40M byte hard disk models. And you can connect up to 12 terminals or printers and other add-on Systems Group floppy, tape and hard disk single or dual drive subsystems.

Select CP/M, MP/M or OASIS to perating systems to run all your word processing and

accounting programs. No matter what size organization you

control, controlling will be easier from now on.

See the System 2800 from Systems Group, they're

what computers should have been in the first place.

The Expandable Computer Family from Systems Group.

Tomorrow's Requirements 10M byte hard disk and floppy drive, single or multi-user system

1985
Your Future Requirements
40M byte hard disk and 20M byte tape
back-up, single or multi-user system

4022 has one print mode and one type size giving 10 cpi or 80 characters per 8-inch line. Characters can be widened, however, for special effects.

• The character matrix of the MX-80 is 9 by 9 dots, whereas that of the CBM 4022 is 6 by 8 dots (5 by 8 for nongraphic characters). This allows two-dot lowercase descenders for the MX-80 versus one-dot descenders for the CBM 4022.

The MX-80 has four indicator lights: Power On, Printer Ready, Paper Out, and On Line. The four switches on the MX-80 are Power On/Off, On Line, Form Feed, and Line Feed. In addition, a warning buzzer responds to paper-out and error conditions. The CBM 4022 has one indicator light (Power On), which also flashes for paper out, and two switches: an On/Off switch and a Paper Advance button that takes you to top-of-form or feeds continuously if held down.

• The MX-80 lists for \$645; the CBM 4022 lists for \$795. Since no addi-

tional interface board is needed to connect to PET/CBM computers, you could come out ahead with the 4022.

## CBM 4022 Versus CBM 2022

How does the CBM 4022 stack up against its predecessor, the CBM 20227 Physically, they are quite different. The 4022 is lighter and far more compact. It is also much quieter—a plus for the families of nighttime programmers! The 4022 has true lowercase descenders; the 2022 does not.

Both printers share a slightly annoying bug. When in the lowercase mode, the backslash, the left arrow and up arrow, and the left and right brackets must be shifted to achieve their normally unshifted appearance. For their shifted versions, or graphics, you must type them unshifted. I have learned to live with this. The earlier model's paper advance couldn't find the top-of-form, but it was useful for advancing the

paper short distances without turning the knob. The new model makes it more difficult to back up the paper without crinkling precious hard copy.

Both CBM printers have formatting and other features that are controlled by a system of secondary addresses (sa). These features are activated by opening files (channels) to one or more of the secondary addresses and then printing to the appropriate file. The earlier model 2022 had these seven secondary addresses:

- sa 0: Print exactly as received
- sa 1: Print according to an established format
- sa 2: Establish format field
- sa 3: Set number of lines per page
- sa 4: Activate error messages
- sa 5: Design custom character
- sa 6: Set spacing between lines

The later model 2022 added an eighth secondary address (sa 7) that switched the entire PET/CBM character set from uppercase/shifted

Photo 1: Manufactured in Japan by Epson, the new CBM 4022 combines the hardware features of the MX-80 with the upgraded operating system of the CBM 2022 printer.

## A simple fact:

The considerable benefits of a personal computer like the Osborne 1® are often intangible, often exciting, and always expanding.

The *value* of the Osborne 1 is clear and simple:

\$1795. Complete.

## \$1795 includes this hardware:

graphics to lowercase/shifted uppercase. However, this upgrade had one nasty bug. Often, when another secondary address was accessed, the character set would switch inexplicably to lowercase. The only remedy for this was to reset the printer by turning it off and then on again. The CBM 4022 has overcome this problem with the addition of three more secondary addresses: numbers 8, 9, and 10-for a total of 11. Secondary address 8 switches the printer back to uppercase mode. Secondary address 9 closes the channel to sa 4, the error channel, and sa 10 resets the printer so that only sa 0 (the default channel) is left open. These new addresses allow much better and more reliable direct keyboard and software control of printer functions. The last four secondary addresses for the CBM 4022 are:

sa 7: Switch to lowercase

sa 8: Reset to uppercase

sa 9: Turn off error channel

sa 10: Reset everything

Let's look at some of the 4022's features in more detail. If a file (channel) has been opened to sa 1, all printing will be in a format that was previously established. This format was set up by opening file sa 2 and then assigning a format field (or image string) to a string variable, then printing that string variable to the file open to sa 2. The format field that governs output layout is similar to the image fields used in the PRINT USING command found in some versions of BASIC.

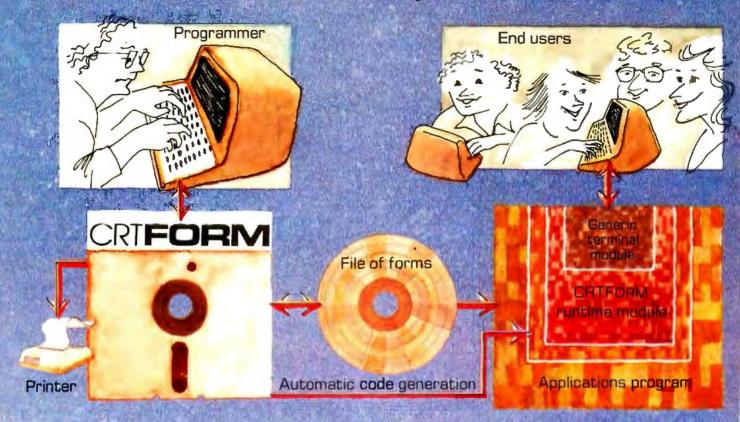

Here are a sample PRINT statement, a format field, and the formatted printout. (The values of the variables used are A\$ = "OK", A=37, B=86, C=8.27, D=1.28, E=1.25, F=26.51, G=-3, H=-3.) The PRINT statement is:

PRINT#1,"A\$CHR\$(29)CHR\$(160) CHR\$(29),A,B,C,D,E,F,G,H"

The format field for this PRINT statement is:

AAAA AAA ZZZZ R| 9999R| 99,99 ZZ,99 \$99,99 \$\$\$,99 S99 99-

## Tired of writing (and rewriting) customized and friendly error free code?

## CRTForm™ is a programmer productivity tool that saves time.

CRTFORM produces a friendly bug free Interface between end users and the applications programmer.

CRTForm makes sure that end users enter information correctly, and gives error messages (In plain English) if they don't, it guarantees that programmers will receive correct information without having to write hundreds of lines of error checking code.

CRTFORM allows you to modify program input specifications without requiring expensive and time consuming changes in applications code. It even generates a source code skeleton (Pascal, BASIC, COBOL, FORTRAN, PL/1, and Ada) to interface the programmers' application code to the CRTFORM runtime module.

The CRTFORM package consists of:

- A forms manager that manipulates random access files of input specification forms.
- An editor that creates and modifies the specifications forms.
- A print utility that produces hard copy of forms and their specifications.
- A code generator that writes source code skeletons for ease of program interfacing.
- A terminal-independent runtime module in the machine language of your host processor.

CRTFORM is available under the CP/M, UCSD, and Apple Pascal operating systems. Please call or write for further information on OEM licensing arrangements, or for the name of your nearest CRTFORM dealer.

## TWO TO REMEMBER

## 256 Kb Dynamic Memory...

Available now from Dual Systems: DMEM/256 memory boards. Put the most density of memory ever available on your IEEE/S-100 bus. Get industrial-grade quality with this ruggedly built board; it's been burned in for 168 hours.

- ☐ FULL 256 Kb on a single board.
- TWO INDEPENDENTLY ADDRESSABLE 128 Kb BLOCKS.
- RUNS IN 8 MHz System.
- RUNS AT 4 MHZ BUS SPEED (no wait states).
- □ RUNS IN 8 OR 16-BIT systems with 8 or 16-bit wide data paths.
- ☐ EXTENDED 24-BIT ADDRESSING
- □ PARITY ERROR DETECTION generates either interrupt or bus error signals on error.
- □ DMEM/256KP (Parity) . . . . \$1345

## Static Non-Volatile Memory

The Dual Systems CMEM memory boards combine high speed CMOS memories with new 3-10 year lithium batteries to give you the nonvolatility of an EPROM board while retaining the instant writability of a high-speed read/write RAM.

- ☐ RUNS AT 6 MHz (no wait states).
- 8 OR 16-BIT with 8 or 16-bit wide data paths.
- ☐ EXTENDED 24-BIT ADDRESSING and bank select.
- ☐ CMEM/32K ...... \$895
- ☐ CMEM/16K ...... \$795 □ CMEM/8K ..... \$695

## **DUAL SYSTEMS**

720 Channing Way, Berkeley, CA 94710 (415) 549-3854/3890 - Telex: 172029 SPX

NORMAL	+++1
LINE	+++
SPACING	+++
6 LINES	PER INCH

Figure 2: Three examples of the line spacing available with the CBM 4022.

The formatted printout is:

OK 0037 | 86 | 8.27 01.28 \$ 1.25 \$26.51 - 33-

The CHR\$(29) in the PRINT statement is a string delimiter that assigns spaces to the right of a string equal to the number of spaces in the format field to the right of the alpha (string) field. The As represent characters in a left-justified alpha field and are right padded with blanks, if necessary. The CHR\$(160) prints the first character of the next alpha field as a blank and then right pads the rest of the alpha field with blanks. Otherwise, CHR\$(160) will add an extra space, as well as convert unshifted leading spaces in a string to shifted spaces. A shifted space in a string will be accepted as a space for formatting,

The other symbols are numeric. The 9s are digits in a right-justified field and are left padded, if necessary, with blanks. Zs act like 9s, except blanks are left padded with zeros. A single \$ next to a 9 or Z gives a fixed dollar sign, whereas using all \$s up to the decimal gives a floating dollar sign. S prints the sign of a number to its left (-12, +15); the - sign prints the sign of the number to its right; a blank if positive, and a - if negative. Literals such as vertical bars can be embedded in the format field. These embedded literals are useful in creating special forms as a part of the printout.

When paging is turned on by printing CHR\$(147) to a file open to sa 0, the paper is advanced six spaces after 60 lines have been printed. The number of lines per page can be changed from the default number 66 by first turning on the paging feature, opening a file to sa 3, and then printing the number of lines to that file (e.g., PRINT#3,33-which would be correct for 81/2- by 51/2-inch paper). After 27 lines have been printed (six less than the 33 set by sa 3 in this example), the paper automatically advances six spaces: three spaces before and three spaces after the perforations—if you have planned correctly. When paging is turned off by printing CHR\$(19) to a file open to sa 0, a topof-form function is performed. It is a good idea to do this if you are not certain that all set lines have been printed.

## Additional Features

Six diagnostic error messages can be accessed by opening a file to sa 4:

\*PE:L\* Lines per page out of range

\*PE:C\* Bad command (invalid secondary address)

\*PE:M\* Data-format mismatch

\*PE:E\* Exponent error

\*PE:F\* Bad format

\*PE:T\* Terminator error (change of sa before carriage return or other terminator detected)

This error channel can be turned off by opening a file to sa 9, printing to that file, and then closing the file.

The User's Manual gives a method for designing custom characters that should be changed to the following: Fill in a 6 by 8 matrix with dots where you like. Each row in this matrix is assigned a value that is a power of two from 1 (bottom row) to 128 (top row). The dot values are added for each of the six columns, assigned a CHR\$ value, and then printed to a file open to sa 5. This character can be printed as CHR\$(254).

Opening a file to sa 6 allows you to change the normal spacing of 6 lines

# INTELLIGENT PRINTER INTERFACE

Free Your Computer from the Mundane Task of Printing

Imagine being able to use your computer seconds after beginning an extensive printout.

Visualize your printout with page breaks, page numbering and titles, margins of your choice, indented carryover lines, on any size paper!

Appreciate the time and money you will save by not waiting on your printer.

SooperSpooler, a buffered printer interface, maintains control over your printer while you go on using your computer for more productive activities. Eliminate waiting while your printer pecks through a long document. SooperSpooler accepts information from your computer at up to 2500 characters per second and feeds it to your printer as fast as it can handle it—without using any of your computers memory or time! As soon as SooperSpooler has stored your document in its buffer, control of your computer is returned to you.

#### SooperSpooler features include:

- 16K Memory—Will handle most of your printing jobs (expandable, see options)
- Buffer Status Readout—Lets you know just how much data is stored
- Space Compression—Makes the best use of memory on columnar documents
- Pagination—Eliminates printout on page perforations
- Page Stops—For single sheet printouts
- Headers and Page Numbering—
   Give your listing a professional look
- Indentation on Carryover Lines— Easy to find the beginning of a line
- Self Test Routine—You instantly know that all is well
- All Features Software Controllable
   Your program can take over
- Plugs into Most Computer Systems—Standard cables available
- \$349.00!—16K parallel 1/O unit

#### **Options:**

- Serial Board—\$95.00—Gives you
  the option of any combination of
  serial or parallel input or output. Can
  also be used for modern transmission.
- Memory Expansion—\$159.00—
   Additional 46K for a total of 62K
- Cables—Available per your application.

#### **Toughest Boards** in Town... IEEE 696/S-100

#### NON-STOP CLOCK

Keeps time with power off. Our industrial clock utilizes a new lithium battery for 3-8 years use. Easiest clock to program you'll ever see. Runs in all 5-100 systems.

- ☐ Year, date, hrs, mins, secs.
- ☐ Uses new LSI CMO5 chip.
- □ Vectored interrupts.

□ CLK-24 ..... \$250

#### A/D CONVERTER

IEEE696/S-100 AIM-12 industrial standard module designed for industrial analog-to-digital use.

- Runs in all S-100 systems.
- □ 32-channel, 16-differential □ 12-bit resolution/accuracy. 

  25-microsecond conversions.
- Instrumentation amplifier.
- BASIC program provided.
- □ AIM-12...\$695 □ AIM-128 w/1-1000 gain transducer amplifier.

#### D/A CONVERTER

AOM-12 IEEE696/S-100 industrial level digital-to-analog (D/A) converter.

- 12-bit ± 1/2 L.S.B. accuracy over full 0-70°C temperature range.
- $\square$  Outputs 0-10,  $\pm$  5, or  $\pm$  10 volts. ☐ Short circuit protection, all outputs. ☐ Switch-programmable for multiple
- boards.
- ☐ AOM-12, S575

#### VIC 4-20

Standard output for industrial control 4-20 mA D/A converter. Used in conjunction with the D/A board, VIC4-20, \$445.

#### **DUAL 77 Data Acquisition** and Control System-

A Z-80 based system built to industrial standards; designed for severe environments. BASIC language makes programming easy. Access to hundreds of sensors. Expandability to meet your increased needs. Nonvolatile memory. Power interruption recovery with automatic restart. DUAL 77 includes AOM-12, AIM-12, CLK-24, 64Kb (2-CMEM/32K), 2-SI/O ports (SIO-2) and twin 8" 1 Mb drives with cp/m, BASIC and choice of video or printer terminal: \$12,495. DUAL 77A basic controller only without drives, software and terminal: \$6,310.

per inch (see figure 2). To do so, you must choose a divisor for 216 that will give a quotient that is the number of lines per inch that you want (default = 36 for 6 lines per inch): 18 yields 12 lines per inch and is nice for graphics that normally get too stretched out vertically when printed: 24 yields 9 lines per inch, but some graphics with this spacing are still too stretched out. If you want normally spaced text and somewhat compressed graphics, you can leave an extra space between text lines in your program and then change your spacing to 12 lines per inch. The User's Manual needs a revision on line spacing. The values given on page 31 are incorrect; they are left over from the model 2022. To correct them, change the 144 to 216, and change the divisors accordingly. You can use any divisor from 1 to 127. Dividing 216 by 1 will, of course, give a quotient of 216—the number of lines per inch (1/216, or 0.0046, inch spacing). Dividing 216 by 127 will give a quotient of 216/127, or approximately 1.7 lines per inch (127/216, or 0.5880, inch spacing).

The CBM 4022 and 2022 both have a set of special control characters. Their functions and equivalent keystrokes are listed in table 1.

To get more information on the use of these controls plus the other features of the CBM 4022, consult either the Commodore User's Manual or the appropriate sections of the Personal Computer Guide, 2nd edition, published by Osborne/McGraw-Hill.

#### Conclusions

The CBM 4022, manufactured by Epson for Commodore, is the dotmatrix printer of choice for users of PET/CBM computers because of the Commodore specificity of its operating system. It compares well with its cousin, the Epson MX-80.

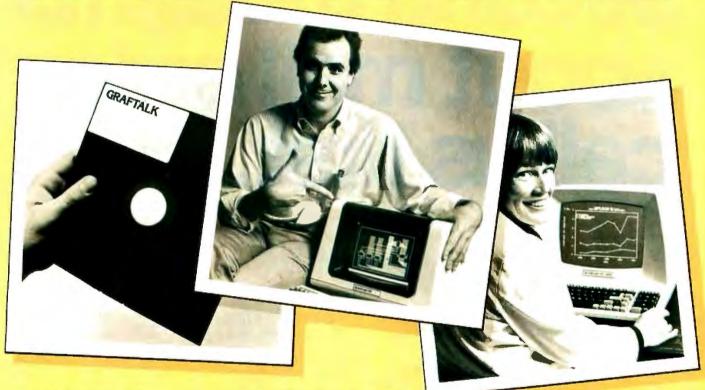

This printer is an improvement over the earlier CBM 2022 because it has true lowercase descenders; is quieter; has an inexpensive, disposable print head; uses a cartridge ribbon; and has overcome some serious bugs with the addition of three new control channels (secondary addresses).

The CBM 4022 features control characters, secondary address channels, the full CBM 256-character set with graphics, and user-designed characters. Although the CBM 4022 still has a minor bug or two, its weakest point is the inaccurate user's manual.

The \$795 list price is reasonable, considering that a simple cable is the only extra expense.

I have used both the CBM 2022 and the new CBM 4022 printers during the last year. Although most of my time has been spent with the earlier model, I am very pleased with the upgraded version as it has worked well for me. I enthusiastically endorse the Commodore CBM 4022 printer. ■

# GRAPHICS FOR CP/M COMPUTERS

GRAFTALK®
The first graphics software

The first graphics software for CP/M systems, GRAFTALK reduces data to pictures, giving you the ability to look at information that would otherwise be a boring text file.

GRAFTALK is friendly and easy to use. Great for first-time users. But that doesn't mean GRAFTALK lacks capability.

Bar charts. Pie charts. Line plots. Symbol plots. Composite plots. Text. Color. Advanced graphics, over 100 powerful commands, and sophisticated "tuning" features.

You name it, you can picture it.

Available from:

2 AUTOGRAPH
Terminals and printers for graphics and alphanumerics, from DATATYPE.

The AUTOGRAPH terminal is based on the popular TeleVideo series. So you get all the terminal you need for your CP/M system's alphanumeric requirements.

We've added the logic necessary to make the terminal fully compatible with GRAFTALK. (With ISSCO's Tell-A-Graf and Tektronix graphics software, too.) And you can combine a graphic display with alphanumeric information. (We can even supply retrofits for your TeleVideo terminals.)

The AUTOGRAPH dot matrix printer is quiet, reliable, and fast. (You get up to 200 characters per second at only 54dbA.)

The 7 x 9 dot print head will also produce draft-quality and correspon-

dence-quality letter characters. In the graphics mode you get a true hard copy of the graphics you create on your AUTOGRAPH terminal using GRAFTALK.

RESULTS
You can now put graphics to work to communicate your business information. Quickly, easily, and affordably. Your local AUTOGRAPH distributor can provide a demonstration of GRAFTALK and the AUTOGRAPH series.

Call or write DATA TYPE for more information and the name of your local AUTOGRAPH distributor.

# Four New Products from Radio Shack

by Chris Morgan

It was Christmas all over again on January 19 at Radio Shack in Fort Worth, Texas, where a quartet of major new products was unveiled during a day-long session. Some of the announcements were expected. Others were surprises.

#### The TRS-80 Model 16: Two Computers in One

The most significant announcement was for the new TRS-80 Model 16 computer, which contains a Motorola M68000 processor (see photo 1). Externally, the unit looks like

the TRS-80 Model II (in fact, the case is virtually identical to the Model II's), but the front bezel has been redesigned to accommodate either one or two slim-line 8-inch drives. Two of these drives fit into the same amount of space as a single, standard-width drive. The big surprise is that Model II owners will be able to convert their machines to Model 16s by adding two printed-circuit boards that together cost \$1499. But there's one limitation: the maximum RAM (random-access read/write memory) on the upgraded Model II system is

256K bytes, whereas the Model 16 allows the user up to 512K bytes of RAM on board.

The Model 16's most important feature is its built-in Z80 coprocessor with 64K bytes of its own memory that allows the user to run all existing Model II software, Radio Shack's simple but clever idea is to free up the 68000 processor by using the Z80 for disk and I/O routines. This has to be one of the most elegant answers to the question of 8- and 16-bit compatibility. The operating system (Radio Shack's own design) boots up like the Model II, but automatically enters the 16-bit mode. A simple keyboard message from the user switches the system to the Z80 mode.

#### Floppy Disks and Hard Disks

The slim-line floppy-disk drives are double sided and double density, with slightly more than one megabyte capacity each (formatted). Normally, a user would get only one floppy-disk drive for operating the Model 16 with a Radio Shack 8-megabyte hard-disk unit. Such a configuration (with the maximum 512K bytes of RAM) costs \$11,191-a bargain. By comparison, the least-expensive configuration, featuring 128K bytes of RAM and one disk drive (no hard disk), Costs \$4999. This certainly gives the IBM Personal Computer some competition. (It should be kept in mind that the Model 16 lacks some of the IBM's features, such as color graphics.)

The announcement of the TRS-80 Model 16 gives the 68000 processor a firm footing in the 16-bit sweepstakes. (Can Apple be far behind with its 68000 design?) It's safe to say that the 16-bit era is underway.

Photo 1: Radio Shack enters the 16-bit market with the Model 16. While cosmetically very similar to the Model II, the Model 16 contains a Motorola 68000 processor and can address up to 512K bytes of memory. Two slim-line 8-inch floppy-disk drives can be installed in the same space occupied by one standard-width drive. When used in conjunction with Radio Shack's 8-megabyte Winchester hard-disk drive, one drive is sufficient. The Model 16 also contains a Z80 processor. Though normally used for disk I/O, the Z80 is employed in a Model II emulation mode and addresses its own 64K-byte memory. Upon booting up, the Model 16 automatically enters the 16-bit mode. A few simple commands place the machine in Model II emulation mode.

#### An Updated Pocket Computer

The PC-2 Pocket Computer is an improved version of the current TRS-80 Pocket Computer, now known as the PC-1. Like the PC-1, the PC-2, shown in photo 2, is manufactured for Radio Shack by Sharp, in Japan, and features a built-in real-time quartz clock; a 7-by-156 dot-matrix liquid-crystal display; an 8-bit processor operating at 1.3 MHz; a new extended BASIC package with twodimensional arrays, built-in arithmetic functions, and variable-length character strings; a four-color printerplotter/dual-cassette interface (more about this later); and a 60-pin I/O con-

Photo 3: Though cosmetically similar to the Model III, the DT-1 video terminal uses the same monitor section as the Model II. Communication is through an RS-232C port, and both serial and parallel printer ports are provided. Transmission rates of from 75 to 19,200 bps are supported, all through keyboard commands.

Photo 4: The DT-1 video terminal achieves new heights in configurable systems. Not only does the DT-1 have built-in provisions for emulating four popular terminals, it can also be programmed from the keyboard to emulate most other terminals with similar capabilities. Emulation and transmission parameters are stored in an EEPROM, which means, in effect, that the DT-1 programs itself. Parameters can be changed on a more temporary basis as well, without being programmed into the EEPROM.

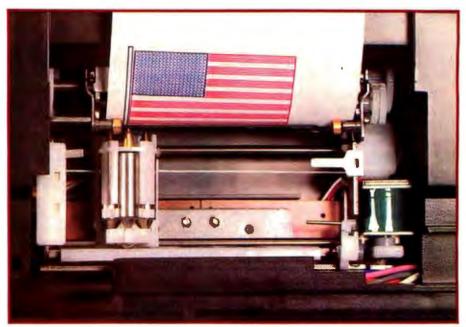

Photo 2: The PC-2 Pocket Computer from Radio Shack features an optional four-color PC-2 Printer/Plotter. The PC-2 contains 2.6K bytes of RAM and 16K bytes of ROM. Provision for a plug-in module allows an additional 16K bytes of RAM, ROM, or both. A 4K-byte RAM module is available for \$69.95. PC-2 peripherals are intelligent and contain additional RAM and ROM. The Printer/Plotter can produce nine sizes of characters and plot graphs and charts with a resolution of 0.2 millimeter.

nector that brings address data, interrupts, timing, and control signals to the outside world.

The basic PC-2, which retails for \$279.95, contains 16K bytes of ROM (read-only memory) and 2.6K bytes of RAM. There is provision for one additional plug-in module which may be RAM, ROM, or a combination of both. A 4K-byte RAM module is available for \$69.95, and an 8K-byte RAM will be introduced in the near future. The 8K-byte RAM is expected to cost almost as much as two 4K-byte modules. A 16K-byte RAM module is planned, but its introduction will depend on how quickly the price of 16K-byte CMOS RAMs drops.

Peripherals for the PC-2 will be intelligent and will contain their own RAM and ROM which will further extend the unit's memory capacity. An RS-232C interface plus software will also be introduced.

#### A Miniature Four-Color Printer/Plotter

The PC-2 Printer/Plotter is impressive. Packed into the unit's

minuscule chassis is a four-color plotter that "draws" letter-quality characters in nine different sizes on standard 2½-inch adding-machine tape and creates four-color graphs and charts (see figures I and 2). A small circular barrel holds the four miniature solenoid-selectable pens.

The PC-2 Printer/Plotter is not a toy; it is capable of plotting with a resolution of 0.2 millimeter! It features a simple, yet sophisticated paper-drive system that anchors one side of the paper tape with a small nubbed wheel. This arrangment allows the plotter to move the paper tape back and forth repeatedly by as much as 10 centimeters as it creates an image. In the character mode, the printer's average speed is 12 characters per second (see photo 2).

#### The DT-1 Video Terminal

Radio Shack has done some unique things with its new terminal entry, the DT-1, shown in photos 3 and 4. For a suggested retail price of \$699, you not only get an 80-by-24 character display, serial-communication port, and both serial- and parallel-printer ports-you also get the built-in capability of emulating a number of other terminals, including the Televideo 910, Lear Siegler ADM-5, ADDS 25, and Hazeltine 1410. This is accomplished by simple commands from the keyboard; no DIP switches to set. All emulation parameters as well as transmission protocols such as word length and data rate are then stored in an EEPROM (electrically erasable programmable read-only memory). Thus, the DT-1 actually reprograms itself. Even when power is turned off, the DT-1 retains its emulation and transmission parameters.

As if that weren't enough, you have the ability to change any or all of the emulation and transmission parameters, which allows you to emulate a number of other terminals in addition to those that are built in. The cursor is programmable from the keyboard and may be either a steady or blinking block or underline. The video attributes include normal. reverse, invisible, blink, underline, and half intensity. Data rates from 75 to 19,200 bps are available. The blackand-white monitor section of the DT-1 is identical to that of the Model II computer.

# High-Resolution BASIC Graphics Package for the Model II

A \$499 high-resolution BASIC graphics package that allows the user to create black-and-white graphics with a resolution of 640 by 240 pixels is now available for the TRS-80 Model II (see photos 5 and 6). The price includes a plug-in printed-circuit board with 32K bytes of on-board memory. Because the high-resolution graphics are generated from a separate memory, both text and graphics can be overlaid on the screen and each can be cleared separately.

The accompanying BASIC package features the same commands as the high-resolution BASIC for the TRS-80 Color Computer, except that only black and white can be chosen. Radio

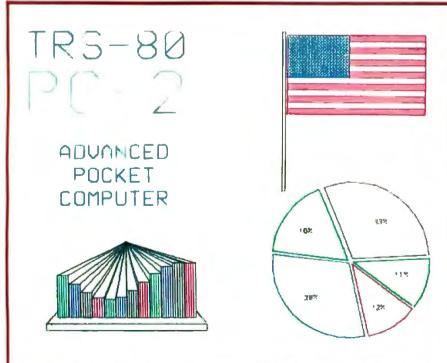

Figure 1: The Printer/Plotter for the PC-2 Pocket Computer is capable of 0.2 millimeter resolution in four colors. Characters may be presented in nine different sizes. Charts and graphs are no problem for this machine.

Shack is including a library of commands that allow you to pass parameters from COBOL, FORTRAN, or assembly-language programs—a nice touch.

Yet to come is a printer dump routine that lets the user dump the screen to the Radio Shack Lineprinter VIII. Note: In order to use the high-resolution BASIC graphics package, your Model II must have the latest CPU (central processor unit) board, because the original Model II CPU board has a different set of wait states than the graphics board requires.

Radio Shack will retrofit any Model II with the latest CPU board if you bring your computer to a Radio Shack computer center. The upgrade, if needed, is included in the cost of installing the graphics package.

#### Final Thoughts

These four new products from Radio Shack indicate both a continuing commitment from the company to the furthering of the state of the art, and reaffirmation of the company's refreshing entrepreneurial approach to new computer products.

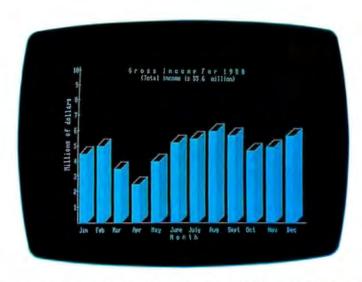

Photo 5: A bar graph produced with the Model II high-resolution graphics package. Both text and graphics can be mixed on the screen and selectively erased.

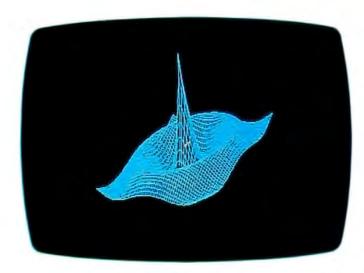

Photo 6: Another example of what is possible using the Model II highresolution graphics package.

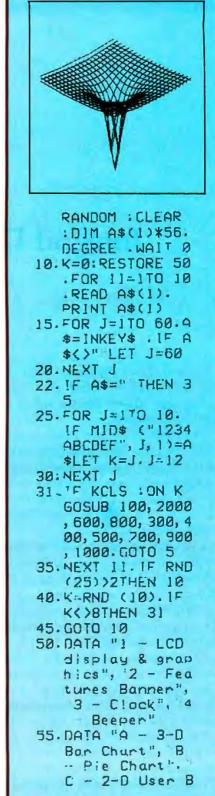

Figure 2: Mixing text and graphics is easy with Radio Shack's new Printer/Plotter. Also shown is a partial BASIC listing.

# **Hardware Review**

# Integral Data Systems' Prism Printer

Ed Umlor

E & G Umlor Enterprises

4 South Street

Milford, NH 03055

Integral Data Systems (IDS) has introduced an innovative printer called the Prism, whose modular design uses add-on options which let you upgrade the machine as needed.

The basic 80-column Prism is available for \$899 and yields correspondence-quality print using an overlapping 24 by 9 dot matrix. Printing bidirectionally at 110 characters per second (cps) (up to 150 cps for proportionally spaced characters) the Prism printer is capable of 10, 12, or 16.8 character-per-inch densities, plus double-width characters.

Selectable standard features on the basic printer include automatic text justification, programmable horizontal and vertical tabbing, reverse paper feed, and "fine positioning" of characters to 1/120 inch. Up to four different 96-character sets can reside within the printer at the same time, although the basic unit is provided with only one 96-character set.

The Prism is microprocessor controlled, with true logic-seeking capability. It comes with a standard RS-232C serial interface as well as a Centronics-compatible parallel interface. Serial transmission rates from 110 to 9600 bits per second (bps) are switch selectable.

Six upgrade kits can be added to the printer at any time making it one of the faster printers in its price category. (As a comparison, an 80-cps printer drops to about 60 cps in enhanced mode and 40 cps in double-strike mode.) The Prism does not have a double-strike mode, although it is capable of providing it with the proper software. You can do reverse linefeeds.

#### **External Controls**

A slot on the top left side of the printer exposes the selftest switch and the power-up configuration switches—a

#### At a Glance

#### Name

Prism Printer

#### Use

Dot-matrix printer

#### Manufacturer

Integral Data Systems Millord, NH 03055 (603) 673-9100

#### Dimensions

80-column; 9.1 by 15.75 by 12.4 inches (23.1 by 40 by 31.5 cm) 132-column; 9.1 by 21.6 by 12.4 inches (23.1 by 54.9 by 31.5 cm)

#### Features

80 and 132-column models, 24 × 9 dot matrix, bidirectional printing at 110 to 150 cps, true logic seeking, automatic text justification, programmable horizontal and vertical tabbing, 96-character ASCII set, up to four character sets coresident, microprocessor controlled, RS-232C and Centronics-compatible interfaces.

#### Options

Cut Sheet Feeder, Dot Plot, Prism Color, Sprint Module, additional character sets, cassette for fully automatic sheet feed

#### Price

80-column, basic unit, \$899; 132-column, basic unit, \$1299; Options available now, Cut Sheet Feeder, \$149, Dot Plot, \$99; Prism Color, \$399; Sprint Mode, \$99. To come: Additional fonts, \$99; cassette for automatic sheet feed, \$399. Note: Until April 1, 1982 only—Special Option Package: Cut Sheet Feeder, Dot Plot, and Sprint Mode, \$297.

#### Warranty

90-day limited

very nice touch in the design of the printer. Unlike most printers, you do not have to remove the cover or fumble with the unit to change the power-up parameters. Three switches located under this slot provide self-test on/off (a

#### A Closer Look

The Prism printer gave me several pleasant surprises. The early IDS Paper Tigers were some of the loudest printers I had encountered. When IDS engineers designed the 560-and now the Prism-they acoustically insulated the case and lowered the noise level to less than 63 dBa, a level suitable for most office environments. (By the way, the case for the Prism is identical to the one used on the 560.)

The print quality in the normal mode is excellent, Most other printers require an enhanced mode (move over 1/2 dot and strike again) or double-strike mode (reprint entire line) to achieve the same character quality. Furthermore, the Prism produces this type at 110 to 150 cps, and may be used in any combination. Cut Sheet Feeder. Dot Plot graphics, Prism Color, and Sprint Module upgrades are available now; special character sets and a cassette for fully automatic sheet feed will be available in the near future.

Control Line Form Length										
83-1	\$3-2	S3-2	Length (inches)							
OII	Off	Off	3							
Off	Off	On	4							
Off	On	Off	35							
Off	On	On	7							
On	110	ÔΠ	12							
On	Off	On	11							
On	On	OII	8,5							
On	On	On	14							

	Control Line Serial Data Hate						
53-4	\$3-5	bits per second					
Off	Off	2400					
Off	On	300					
On	Off	9600					
On	On	1200					

Selecting Parity									
<b>S3-6</b>	83-7	Parity							
011	110	No parity, transmit space							
OIL	On	No parity, transmit mark							
On	011	Even parity							
On	On	Odd parity							

Table 1: DIP switch 3, located on the top left-hand side of the printer and accessible through a slot located there, controls form length, data rate for the RS-232C interface, and the parity. Although the switch sets the default values upon power-up, they can be overridden by software commands.

toggle switch), print-parameter controls (DIP switch S4). and form-length and serial-interface-parameter controls (DIP switch S3). The self-test switch is nonactive with the lever to the left and active (only in the off-line mode) when the lever is to the right. S4-1 and S4-2 set the character density and characters per inch (cpi), OFF-OFF sets the 5-cpi mode (double-width mode), OFF-ON sets the 16.8-cpi mode (condensed mode on most other printers). S4-3 selects 6 lpi (lines per inch) when OFF or 8 lpi when ON. S4-4 controls the automatic boundary skip (so the printer skips over the perforations on fan-fold paper) of one inch. When OFF, S4-4 disables the skip; when S4-4 is ON the skip is enabled. S4-5 is the switch TRS-80 users will be interested in. ON enables the auto linefeed on carriage return and OFF disables the auto linefeed. S4-6 controls the default setting of the Sprint Mode and is not used in the basic Prism, S4-7 controls the expanded functions (IDS's name for software control), Once again, ON enables and OFF disables software control. The functions of DIP switch 3 are shown in table 1.

On the right side of the top of the printer are two switches and a marker plate with several indicator lights. The left switch is a three-position switch labeled FS/OFL/ONL (Forms Set/Off line/On Line). The right switch is a spring-loaded, center return (off position), two-position switch labeled FF/LF (Form Feed/Line Feed). The indicators are for fault, on line, and power on.

#### Software Control

Many software commands are available with the basic unit. Here is a complete rundown. A line feed, Ctrl-J or CHR\$(10), causes the paper/form to advance one line vertically. A form feed, Ctrl-L or CHR\$(12), feeds the paper/form vertically to the next top of form. A carriage return, Ctrl-M or CHR\$(13), causes the carriage to return without a linefeed (unless \$4-5 is set to auto linefeed) after printing data in the buffer. These three controls will operate regardless of S4-7's position.

Now let's take the rest by the numbers:

Ctrl-A or CHR\$(1): set e\_panded mode (double wide).

Ctrl-B or CHR\$(2); reset expanded mode.

Ctrl-D or CHR\$(4): set justify mode on (left and right margins are even).

Ctrl-E or CHR\$(5): reset justify mode.

Ctrl-F or CHR\$(6): set printer to fixed character space.

Ctrl-I or CHR\$(9): tab to next set horizontal tab.

Ctrl-K or CHR\$(11): tab to next set vertical tab.

Ctrl-N or CHR\$(14): do two line feeds (double space vertical).

Ctrl-P or CHR\$(16): print characters proportionally spaced.

Ctrl-Q or CHR\$(17); reset the deselect mode.

Ctrl-R or CHR\$(18): line feed without carriage return (S4-5's position makes no difference).

Ctrl-S or CHR\$(19): deselect printer (causes it to ignore data from computer).

Ctrl-T or CHR\$(20): do two line feeds without carriage return.

Ctrl-Y or CHR\$(25): do three line feeds without carriage return.

Ctrl-Left bracket or CHR\$(27): cause the printer to enter/exit the programming mode (This is called the escape code ESC).

Ctrl-Right bracket or CHR\$(29): set printer to 10 cpi.

Ctrl-Uparrow or CHR\$(30): set printer to 12 cpi.

Ctrl-Underscore or CHR\$(31): set printer to 16.8 cpi.

ESC F or CHR\$(27)+"F": program horizontal tabs in increments of 1/120 inch (1 inch = 120, 2 inches = 240, . . . etc). CHR\$(27); "F,120,240,600,\$" will set tabs at 1 inch, 2 inch, 5 inch points. You can set up to 8 tab points.

ESC B or CHR\$(27)+"B": set vertical tab 1 in increments of 1/48 inch. CHR\$(27); "B,24" will set a ½-inch vertical tab with only one point allowed. This is ADV-1 and defaults to 8 or 6 as S4-3 is positioned.

ESC C or CHR\$(27)+"C": same as ESC B but with a default value of 8, which is a 6-1pi subscript value.

ESC D or CHR\$(27)+"D": same as ESC B but with a default value of -8, which is a 6-1pi superscript value.

ESC E or CHR\$(27) + "E": same as ESC F but for vertical tabs (1/48-inch increments) and up to 8 values can be set.

ESC G or CHR\$(27) + "G": set the absolute head position from the home position in 1/120-inch increments.

ESC H or CHR\$(27)+"H": set absolute head position from top of form.

ESC J or CHR\$(27)+"J": set margins—two values are required, left margin first, then the right margin (1/120 inch).

ESC L or CHR\$(27)+"L": set vertical form length—two values are required, form length first and then the printable space within that length. This instruction works within the form-length switch settings (1/48 inch).

ESC P or CHR\$(27)+"P": sets the intercharacter spacing in increments of 1/24 character width.

In all the above instructions, a "\$" is required as the last character to terminate the instruction. Tabs may be cleared by setting a single tab to 0: CHR\$(27);"E,0,\$" clears the vertical tabs and CHR\$(27);F,0,\$" clears the horizontal tabs. (I have deliberately not put the PRINT statement in these examples due to the variety of forms it can take. With the Apple computer you open the printer port and then use PRINT statements. With the TRS-80 you have to use LPRINT statements.)

#### **Options**

The \$149 Cut ·Sheet option (what I call letterhead) adds friction feed to the Prism printer. Most printers that have a friction option force you to feed the paper from the top and manually advance it to the position where you want

Fig. 1A

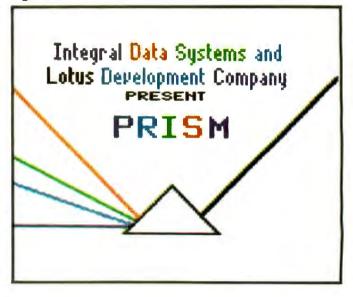

Fig. 1B

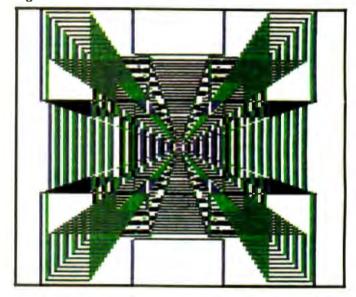

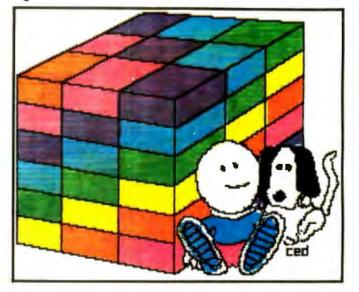

Fig. 1C

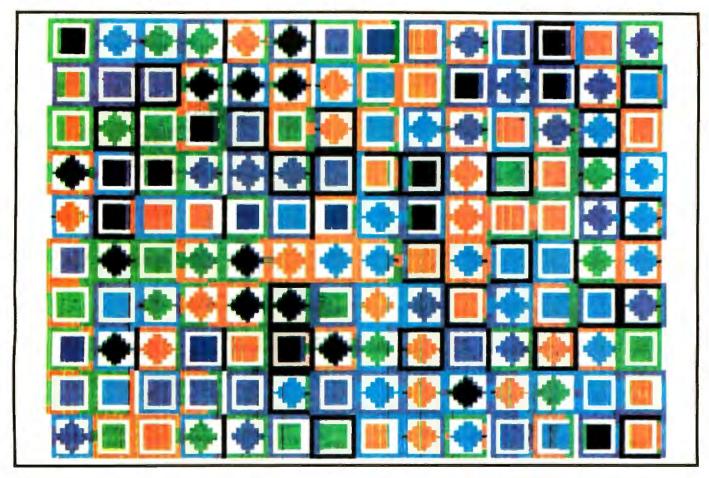

Figure 1: Four examples of color graphics. These were produced on a 132-column Prism printer with the Dot Plot and Prism Color options and the process-color ribbon. Graphics are dot addressable.

to start printing. If you are good at it, you won't have to square up your sheet. It is also very difficult trying to print to the bottom of the page with other friction-feed printers. The Prism's Cut Sheet option shows the same care in design as the rest of the unit. You can feed the paper from either the back or front of the printer. A photo sensor detects the paper being inserted. After a one-half- to one-second delay, the pinch rollers start to revolve, and if you have inserted the paper correctly it will feed and position the sheet to the first printable line on the paper. You might have to manually line feed past your letterhead, or you can handle that with your wordprocessing software. You will have to adjust the tractors on the printer to allow the paper to feed through them with the pins just to the outside of the paper. IDS has placed a set of pinch rollers into the tractors that are driven by the normal tractor-feed mechanism and continue to feed the paper after the bottom pinch rollers have been passed. With the out-of-paper sensor located at the print head level, this allows the printer to print clearly and evenly right to the last line on the page. A simple form feed will eject the letter completely from the printer. Very nice indeed for the office that does a lot of letters on standard letterhead bond.

Dot Plot is a \$99 dot-addressable graphics option package. The density is 84 by 84 dots per inch (dpi) for single-pass raster and 168 by 168 dpi for a four-pass raster. This option adds more control codes for you to play with. To enter the graphics mode you set switch S4-5 to ON and send a Ctrl-C (CHR\$(3)). You can also select unidirectional (default) or bidirectional graphics by sending Ctrl-L'or Ctrl-V, respectively. To exit you use a Ctrl-C + Ctrl-B (CHR\$(3);CHR\$(2);). In the graphics mode you have to be careful to always end your BASIC instruction line with a semicolon to prevent the automatic generation of carriage returns and linefeeds, as these would be printed as graphic characters and mess up your picture. Seven wires of the print head are used in the graphics mode and are bit controlled. Bit 0 controls the top wire and bit 6 controls the bottom wire. Bit 7 is ignored. You also have vertical and horizontal control if you use the previously given codes prefixed by CHR\$(3).

Prism Color is a \$399 color-capability option that adds color designator control codes to your instruction set. The printer that I reviewed did not have this option, so my assumptions are based on the color ribbons that I saw. You will have a choice of three ribbons: black plus process colors for mixing, black plus primary colors, and

#### INTRODUCING AFFORDABLE COLOR INTEGRAL DATA PRISM Printer The

The PRISM COLOR PRINTER prints four basic colors :

COLOR 04-BLACK COLOR #2=MAGENTA COLOR #3=CYAN COLOR #1=Y E L L C W

AND CAN MIX COLORS :

#1+#2, ORANGE MIX #2+#3, VIOLET MIX

MIX #1+#3, GREEN #2+#4, MIX BROWN

#### Versatile Printing Capabilties

- Correspondence quality print in a 2429 matrix cell
- Six software selectable character sixes
- Auto sheet feed mechanism
- Adjustable tractor feed, 5.0 to 14.75 inches
- Programmable horizontal and vertical tabbing
- 6 or 8 lines/inch spacing
- 110-150 cps in correspondence quality
- 200 cps Sprint Mode in draft matrix quality

#### Microprocessor Driven Controller

- State-of-the-art technology
- Versatile features with programmable capabilities
- User defineable function codes

#### Ease of Operation

- Switch selectable baud rates
- Auto line feed capability
- Hardware/software selectable forms length
- Fault/Paper-out indicator light

#### Ready Serviceability

- Simple mechanisms for easy service
- Modular design provides for low MTTR
- Built-in diagnostics and Self-test mode

#### Interfaces for All Configurations

- Parallel (Centronics compatible)
- RS-232c (up to 9600 bd) with Xon/Xoff protocol
- 115/230 volts, 50/60 Hs power, switch selectable

#### **DotPlot Graphics Capability**

- High resolution raster graphics
- 84x84 dots/inch
- Includes 1500 byte character buffer
- Long-life cartridge ribbon system

Figure 3: A comparison of normal and draft print, Figure 3n shows the normal, correspondence-quality print, monospaced, at 10 cpi. Figure 3b shows the print produced by the Sprint Mode option. In this mode, the printer zooms along at 200 cps.

all black for standard printing. The printer I am using has the ribbon set at an angle, allowing the head to start at the top and finish at the bottom of the ribbon. This has the effect of using the entire surface of the ribbon for the expected 10-million-character life. The character life expectancy of the color ribbons should be less, due to the fact the ribbon will be set horizontally. This is necessary for the head to encounter the same color strip on the ribbon during its full travel, The colors are stacked in stripes over the black, which means the ribbon must be positioned to place the proper color in front of the head for each pass. There can be up to four passes of the head for each line feed: top color, next color down, next color down, and black, which is the last color stripe on the ribbon.

The Sprint Mode option is available for another \$99. This option is controlled by S4-6 and is enabled with the switch ON. It gives what IDS calls rough-draft printing. The print quality is that of most other dot-matrix printers in single-pass, unemphasized mode. The difference here is that the Prism does it at 200 cps (see figure 3). This mode can be entered via software and is also switch selectable. To change the default setting, turn off the printer, change the position of S4-6, and turn the printer back on.

Optional character sets should become available in the summer of 1982. For \$99 each, you will be able to have Helvetica, scientific notation, and others. All the special symbols necessary to print in the six major European character sets are standard in the basic printer.

The last option (to be available soon) is a \$399 cutpaper-feed cassette. Here the machine will really outdistance the field of friction/tractor printers in the \$2000-and-under class, as it is the very first one to offer this option. By combining this printer, a word processor, and a mailing list that works with the word-processor files, you will be able to do individualized form letters to your mailing list on your letterhead. Now that is real class compared to most of the form letters that I get in the

Examples of what can be done with the Dot Plot and Prism Color options are shown in figure 1. Figure 2 shows how text, color, and graphics can be combined.

#### Conclusions

Integral Data Systems has developed a new breed of printer. Its designers are to be congratulated for the quality of their product, the workmanship, and their innovative spirit.

- I like the design philosophy, execution, and price. For the money, it's hard to beat.
- You don't have to buy more printer than you need, Options can be added later.
- The documentation is excellent, providing complete setup, test, troubleshooting, and maintenance procedures, as well as complete schematics.
- IDS provides a 90-day limited warranty on all its products. It is presently expanding its service organization.

# Ciarcia's Circuit Cellar

# Use Voiceprints to Analyze Speech

Steve Ciarcia POB 582 Glastonbury, CT 06033

Do you ever talk to your computer? I do. But it doesn't understand a word I say. That's just as well right now, because I talk to it mostly in moments of hardware-induced frustration.

Of course, the computer talks to me. If you've read my June and September 1981 Circuit Cellar articles, you know that my computers can talk using two different methods of voice synthesis. At present, a computer can synthesize speech much more easily than it can recognize speech,

Professional speech-recognition systems currently on the market can cost up to \$100,000. Budget-priced systems for personal computers are available for about \$500, but of course, they don't perform as well.

My mail has been full of requests from readers for a speech-recognition circuit. Most correspondents point out that such a project is a natural follow-up to the two articles on voice synthesis. Unfortunately, designing a cost-effective voice-input speech-rec-

ognition system is a major project; it not only requires a complete understanding of the techniques involved but also necessitates skills in the design of filter networks and intricate data-comparison algorithms.

The basic concept of speech recognition is rather simple: have a computer digitize the analog voice waveform of each spoken word and compare it to a stored reference vocabulary. A basic block diagram is shown in figure 1.

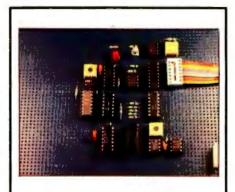

Photo 1: The sample and scanning circuit of figure 5b, constructed on a breadboard.

First, the analog voice input is amplified, then it is digitized to form a word template. This template formatting can be done by various techniques that include bandpass filters, A/D (analog-to-digital) converters, zero-crossing detectors, or fast Fourier analyzers. The result, whatever the technique, is a digital representation of the word spoken into the microphone. In an inexpensive speech-recognition system, this word template might be 10 bytes long, whereas in a \$100,000 system the template may have 10K bytes of data per word.

The input word template is then processed by a computer and compared to a series of templates stored in memory. The stored templates constitute the machine's vocabulary. A spoken word is deemed to be recognized when there is an exact or reasonably close match with one of the stored templates.

In practical speech-recognition systems, the size of the word template must be traded off against the amount of available memory or storage and the computing power of the processor. With a small template, the

Copyright © 1982 by Steven A. Ciarcia. All rights reserved.

words are not very well defined, and there is a considerable possibility that the computer will confuse two different words. On the other hand, large templates, which more precisely define the words, take considerably more time for comparison as well as more storage space.

To achieve reasonably fast recognition with large templates, the computer must digest information at prodigious speed. In professional speechrecognition systems, a typical processor might perform 1 million 16-bit by 16-bit multiplications per second. Creating such a number cruncher is expensive.

To build a speech-recognition system on a low budget, using a microprocessor, we must make some compromise either in the time allotted for the computer to recognize a word or in the precision with which words are defined in the templates. There must be some amount of storage between 10K and 10 bytes that defines a word sufficiently well for our low-cost speech-recognition system to recognize it within a tolerable duration.

#### Preliminary Research

This article doesn't tell you how to build a speech-recognition system.

We aren't ready for that yet, Instead. it describes a scheme to analyze the audible content of speech so that we can more accurately define a suitable template size.

A definition of just how much data is required can be determined only by carefully examining the spectral content of speech and analyzing the differences between the words we want to have the computer recognize. Just what is the audible difference between the numbers "six" and "eight"? Is there a unique set of data points that allows them to be easily differentiated?

In essence, the information we are looking for is a kind of fingerprint for speech, a voiceprint. (It may also be called a spectrogram.) By visually comparing the spectral voiceprints of words, we can perhaps come to understand details of definitive templates and the workings of comparison algorithms.

We may find that in a limitedvocabulary speech-recognition system the spectral differences between the words in the selected recognizable set may be so distinct that the template resolution can be reduced to perhaps less than 100 bytes. It is also possible that such an examination will demonstrate that a monumental effort must be exerted to distinguish between two words such as "seem" and "seen."

I hope to eventually write about a

within the scope of a Circuit Cellar article. For the present, however, I am still researching certain information about the significant differences between words, seeking to answer such questions as: Must data on amplitude as well as frequency be recorded? Must the input word be digitized in real time? Can the stored template data be compressed in some way? What frequencies are important and which can be ignored? Is there much variation between different utterances of the same word?

This month's hardware project, a spectral voiceprint display, should help answer some of these questions.

#### What Are Voiceprints?

When you speak, the sound that comes out of your mouth is composed of various frequencies blended together to create the tonal quality that is unique to your voice. If you attach a microphone to the input of an oscilloscope and speak into it, you can watch the frequency and amplitude changes. The bandwidth of meaningful sounds for most voices is about 4 kHz. (Not coincidentally, this is the passband of a voice-grade telephone line.)

Another method of looking at the various frequencies present in voices is to produce a graph of speech waveforms showing frequency as a function of time. An example of this is shown in figure 2 on page 52. As the

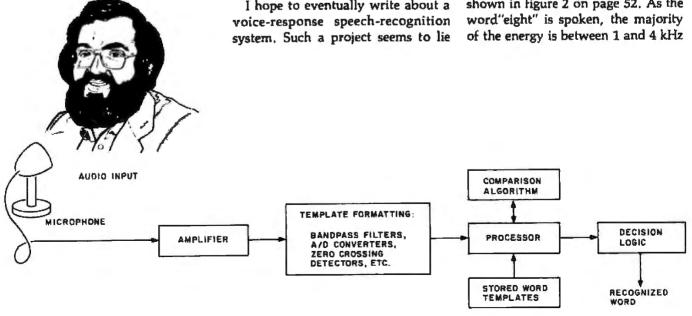

Figure 1: Block diagram of a computer speech-recognition system using word templates.

for the first 0.15 seconds, then a silent period is interrupted after another 0.15 seconds by a quick burst of energy at about 4 kHz. The first waveform group is the "eigh", and the final burst is the "t". A plot of the amplitude also provides significant information.

This sort of voiceprint or spectrogram shows a record of frequency and amplitude versus time.

Producing the graph shown in figure 2 requires an x,y plotter and a real-time spectrum analyzer. This equipment is costly and not generally available to the average experimenter, but with a little ingenuity we can obtain similar results with some simple bandpass filters and an oscilloscope.

#### **Economy Voiceprint Display**

The laboratory spectrum analyzer typically used to produce voiceprints often contains either a scanning filter or FFT (fast-Fourier-transform) processor. Such equipment has extremely high resolution (as well as cost) and allows the operator to resolve frequencies separated by only a few hertz (Hz). This is much more resolution than is required for our applica-

tion, and a more cost-effective realtime spectrum analyzer can be substituted.

Figure 3 is a block diagram of the hardware 1 used to record voice-prints. It consists of an eight-octave bandpass filter connected to a microphone and some timing circuitry. The outputs of the circuit are connected to the x-axis, y-axis, and blanking (z-axis) inputs of an oscilloscope. The result is a three-dimensional view of the spoken word. The x axis represents time, the y axis represents frequency, and the z axis (brightness) represents amplitude.

The plot thus produced looks somewhat different from the spectrogram in figure 2, but it is equally representative of spectral content. The eight filter sections cover eight octaves from 31 Hz to 4 kHz. Concentrations of energy in the eight octaves appear as eight bands across the display.

For example, if there are any frequencies present around 1 kHz, the 1-kHz band on the display is illuminated, appearing as a stripe across the oscilloscope screen. The amplitude of these frequencies governs the intensity of the stripe. If

this approximately 1-kHz signal is weak, the pattern will be dim; if it is strong, the pattern will be bright.

Figure 4 is an example of the kind of display produced by my interface circuit. This is approximately how the word "eight" appears when spoken. You'll note the grouping of energies corresponding to "eigh" and "t" as before. (There is also a shift in frequencies due to the fact that this display was produced by a different

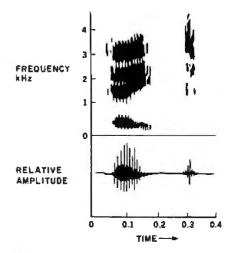

Figure 2: A conventional voiceprint, or spectrogram, of a man saying the word "eight." Frequency is plotted as a function of time.

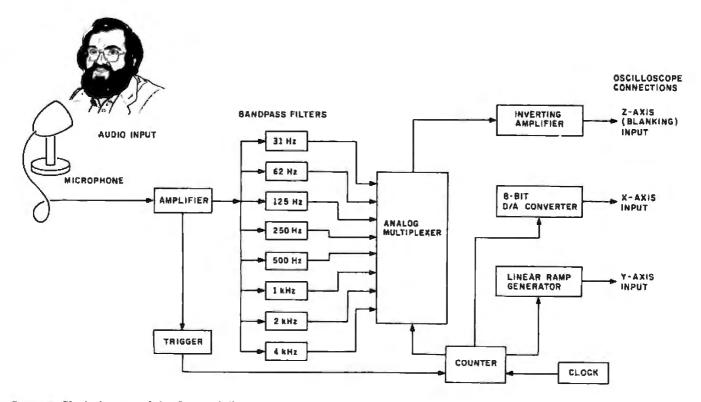

Figure 3: Block diagram of the Circuit Cellar voiceprint-recording system.

person speaking.) While unlike the ink-drawn spectrogram, it is equally detailed and unique.

On an 8- by 10-cm (centimeter) oscilloscope display, each frequency band occupies 1 cm on the vertical (y) axis. Time is recorded on the horizontal (x) axis where 1 cm corresponds to 0.05 seconds (all screen photos accompanying this article have these values). A complete word sample therefore represents sounds occurring during a one-half-second interval, consisting of 128 samples at each frequency. Changing the clock rate of the circuit can increase or decrease the scan time.

The scans appear as vertical lines on the screen. A full half-second sample consists of 128 vertical filter scans. Each vertical scan is divided evenly into eight sections corresponding to the eight filters. The bottom is 31 Hz, and the top is 4 kHz. The intensity of each segment of the scan line is determined by the output voltage of the particular filter: the more positive the output, the brighter the segment. If there is no output from a filter section during a segment interval, that portion of the segment will not be illuminated (it will be blanked). As configured, a half-second sample period scans the filters every 3.9 ms (milliseconds).

#### How the Display Circuit Works

Figure 5 is a schematic diagram of the voiceprint-display system. It is basically divided into two sections: amplifier and filters (figure 5a on page 56) and the sample and scanning logic (figure 5b on page 58). A prototype of the sample and scanning logic is shown in photo 1 on page 50. The ribbon cable leads off to the amplifier and filter board.

Integrated circuit IC1 is a two-stage microphone preamplifier (you could substitute a much simpler circuit; this just happens to be the one I used) feeding output into IC2b, which has a sensitivity adjustment potentiometer and an additional stage of amplification. IC2a is an average level indicator. While each filter responds only to its preset frequency passband, this portion of the circuit passes all

frequencies and produces a DC voltage output proportional to the average volume level. This output is fed to the voltage comparator IC9, which switches when the average input level is above a certain amplitude, thus triggering the sample period when pronunciation of the word begins.

Integrated circuits IC3 through IC6 are configured as eight separate bandpass amplifiers with center frequencies at 31 Hz, 62 Hz, 125 Hz, 250 Hz, 500 Hz, 1 kHz, 2 kHz, and 4 kHz. The filters are not particularly sharp, possessing a frequency rolloff of about 8 dB (decibels) per octave. The output stage of each filter contains an integrator that converts the pass frequencies into an average DC level.

The timing network appears more complicated than it is. For a half-second word sample the clock rate is set for 4096 Hz and is divided down through an 11-bit counter configured from IC14 and IC15. The reset lines of the counters are controlled by the trigger-level comparator IC9 and an RS (set-reset) flip-flop formed from IC7, sections c and d. When the circuit triggers, the reset line on the counters is raised to a logic 1, and they begin to count. After 2048 clock cycles, the flip-flop is reset and the scanning is stopped. A timing

diagram is shown in figure 6 on page 60.

The 3 least significant bits of the counter control the address lines of an 8-channel analog multiplexer, IC16. The eight inputs of the multiplexer are the eight outputs from the filters. and the output of the multiplexer goes to the oscilloscope. When the multiplexer address is binary 000, the 31-Hz filter output is channeled through it to the scope blanking input. where it controls the oscilloscopebeam intensity. Similarly, binary 111 addresses the 4-kHz filter. (While this eight-cycle scan occurs every eight clock periods, it is displayed only at alternating scans.) The other 8 bits of the 11-bit counter set the 256 positions of the x axis (128 displayed and 128 blanked positions).

(The output level of the multiplexer should be set for the blanking range of your particular oscilloscope. This can be either a positive or negative voltage. My oscilloscope, a Tektronix model 2215, requires a negative blanking voltage, so I added IC10 as an inverting amplifier.)

Since an oscilloscope is an analog device, the digital counter outputs must be converted to analog voltages. Two different methods are employed in this circuit. The 8 most significant bits of the 11-bit counter drive an

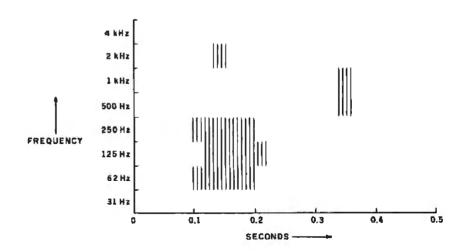

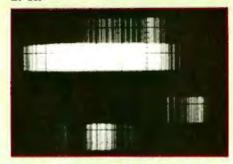

Figure 4: Typical display produced by the Circuit Cellar voiceprint system, of the word "eight." Although dissimilar in appearance to the conventionally plotted spectrogram of figure 2, it contains the same kind of information, along with indications of amplitude through modulation of the intensity of the scanning beam.

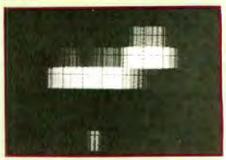

Photo 2:

Voiceprints, or spectrograms, of various words being pronounced by a Micromouth voice synthesizer, as recorded by the circuit of figures 5a and 5b attached to a **Tektronix** model 2215 oscilloscope. Eight frequency bands are defined in the vertical y axis, while the horizontal x axis gauges time elapsed during the sounding of the word. The amplitude of energy in the various frequency bands is indicated by the brightness of the oscilloscope trace.

R-2R-ladder D/A (digital-to-analog) converter, which I discussed in my January Circuit Cellar article. With a count of 0, the output is 0 V (volts): with a count of 255, the output is +5 V. Therefore, each step is 19.5 mV (millivolts).

With a clock rate of 4096 Hz. the D/A converter increases its output voltage by an increment of 19.5 mV every 2 ms. With the scope set for x,y-vector display mode, the x-axis scope trace proceeds from the bottom left corner (0 V) to the bottom right corner (+5 V), taking half a second.

Initially I used a 3-bit D/A converter to increment the position of the v-axis beam. However, the 60-MHz bandwidth of the Tektronix scope was sufficient to cause each vertical scan to appear as eight dots rather than eight line segments. The scope was too fast. This was remedied by using a ramp-function generator configured from IC11 and IC17. IC11 is a positive-going integrator, and IC17 is a shorting switch connected across the integrating capacitor.

When the switch is closed, the output of IC11 is 0 V. This is the case during the odd-numbered scans. when the Q4 output of IC14 is high. On even scans the switch is open, and the capacitor is allowed to charge. As configured it charges linearly at a rate determined by the slope-adjustment potentiometer. This potentiometer should be set so that the output of IC11 (pin 6) goes from 0 V to 12 V during the 2-ms half period of the Q4 output. The clock rate affects this time period, so the slope will have to be readjusted if the clock frequency is changed.

#### Recording Voiceprints

After connecting the voiceprintgenerating system to the scope, you can begin to experiment. Speak a word into the microphone. The beam will be triggered, and the trace will move from left to right across the screen. Slowly increase the inputsensitivity potentiometer until the background noise saturates the display. All filters will have some output, and the screen will be completely unblanked. Slowly back off

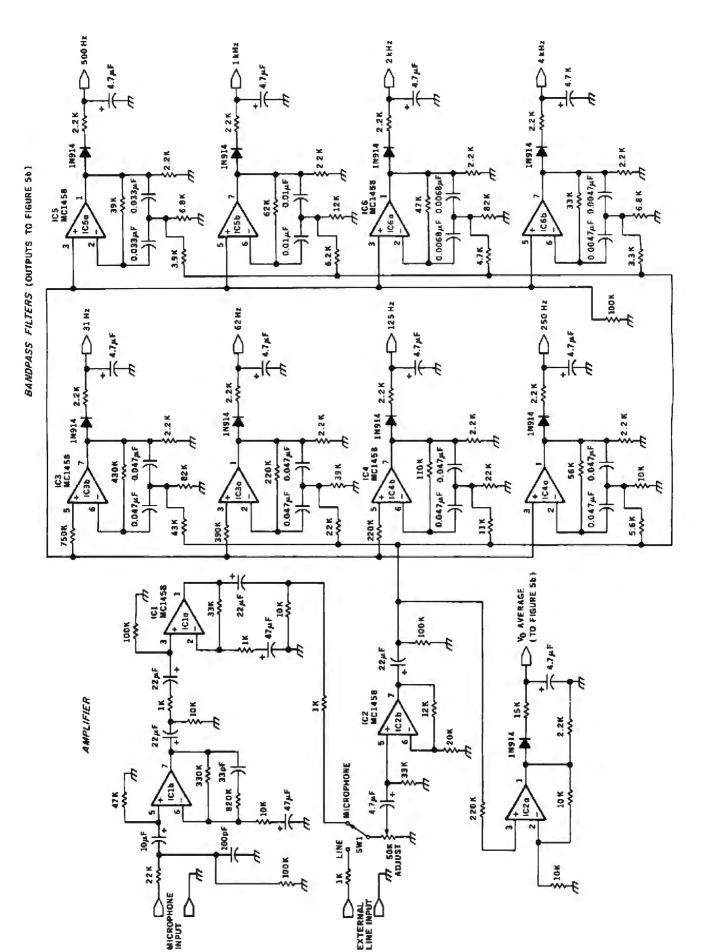

Figure 5a: Section of the schematic diagram of the spectral voiceprint circuit, showing the amplifier and bandpass-filter components. Eight passbands are selected by the filter stages, with the output sent to the scanning and display section of figure 5b.

#### FRIENDLINESS.

Informative HP manuals, helpful error messages, and automatic syntax checking make BASIC language programming easy.

TIME - SPESSED SCC

#### EXPANDABILITY.

Just plug in the HP interface bus (HP-IB) and add up to 14 peripherals without disassembly.

#### 12-DIGIT ACCURACY.

(Not just 9!) Thanks to BCD math capability.

#### **FULL-SCREEN EDITING.**

Edit the easy way – without retyping entire statements. Insert, change, or delete characters at the touch of a key.

#### HP SOFTWARE.

Powerful, time-saving solutions to your everyday problems.

#### PORTABILITY.

Keyboard, CRT, printer and storage – all in a 20-lb. package. So you'll have computing power wherever you need it...office, lab, field, or home.

## INTEGRATED GRAPHICS.

Analyze a better way – with graphics. Document your results with hard-copy plots.

# Hewlett-Packard put it all together.

#### The HP-85 personal computing system.

MON HEW LETT - PADRAND

Leave it to Hewlett-Packard to put a lot of power in a little package. Plus flexibility, portability, and all the other features you'd expect to find in a personal, professional, integrated computing system.

Turn it on and the HP-85 is ready to go. You're off and running using HP software or creating your own programming solutions. There's no bootstrapping. And since the operating system and powerful BASIC language exist in ROM, they use almost none of the available RAM.

If you've been looking for a friendly, integrated

computer with power and dependability, look at the HP-85.

We put it all together for you!

# New from HIPLØT™ multi-pen plotting for as little as \$1480\*.

The new HIPLOT DMP Series 6-pen option makes high performance multi-pen plotting affordable. It's available on the DMP 2, 3, and 4 models in the HIPLOT family so you can enjoy the advantages of multi-colored plots on 8½" × 11" (DIN A4) surfaces. Of course, you also get the standard HIPLOT range of capabilities such as intelligence, controls, interfaces and resolutions. There's a model for virtually every plotting application.

Big Performance in a Small Plotter Since it's introduction, the HIPLOT DMP Series has been recognized as the innovative plotter

TM Trademark of Houston Instrument.

\* U.S. Suggested retail prices.

Centronics\* registered trademark of
Centronics Data Computer Corp.

line which made low-cost, high performance digital plotting a reality.

Now, with our new 6-pen option, there's an exciting new dimension in the DMP Series' versatility. Imagine two standard models with RS-232-C and parallel interfaces, four intelligent models with RS-232-C or Centronics®compatible interfaces, a choice of controls, resolutions, and pen speeds. Add to this the ability to plot with 6-pens on paper, vellum or mylar (ideal for overhead projectors) and you have the ultimate plotter price/performance combination — the perfect choice for the user or OEM.

#### 8-Pen Models Also Available

If you need a little more capability, take a look at our new 8-pen option. It's available on the DMP 5, 6, and 7 so you can have 8-pen multi-colored plots on 11"×17" (DIN-A3) surfaces.

Why wait? Let us send you complete information on this breakthrough in affordable, multipen plotting. Contact Houston Instrument, P.O. Box 15720, Austin, Texas 78761. (512) 835-0900. For rush literature requests, outside Texas, call toll free 1-800-531-5205. For technical information ask for operator #5. In Europe contact Houston Instrument, Rochesterlaan 6, 8240 Gistel, Belgium. The Aspen Software Company Spetting Checker.

# GRAMMATIK

**Beyond Spelling Checking** 

# THE ONLY COMPLETE PROOFREADING PACKAGE

FOR ALL CP/M, MS-DOS, AND TRS-80 WORD PROCESSORS

We'll match Proofreader with any other spelling checker on the market. It has a big 38,000 word expandable dictionary, and can check even your largest documents in under four minutes. Proofreader looks up every word, and does not use less accurate root word analysis like some others. Full interactive correction is standard on CP/M and TRS-80 Model II systems, and is a low cost option for the TRS-80 Model I/III.

Spelling checking alone is not enough! No one else has anything like Grammatik! It analyzes your document for common typos, punctuation errors, misused phrases, and poor writing style. Grammatik is receiving rave reviews from both critics and users. Bob Louden in InfoWorld (12/7/81): "Grammatik is a surprisingly fast and easy tool for analyzing writing style and punctuation. If you are currently doing original writing on a word processor, you should consider this product." Eric Balkan in The Computer Consultant: "I'm impressed with the imagination that went into this product." A user: "Thanks for making my life easier!"

Grammatik and Proofreader are compatible with all CP/M, MS-DOS (including IBM PC), and TRS-80 word processors.

Current CP/M formats:

standard 8", NorthStar, Omikron TRS-80.
Please call or write for details of minimum system sizes, and availability of additional disk and operating system formats. Shipping costs included.

Please specify your system configuration when ordering. Dealer inquiries invited.

MS-DOS versions scheduled for March 1982 release.

P.O. Box 339-B, Tijeras, NM 87059 (505) 281-1634 the gain until the display appears to respond as you speak a word. Continue this adjustment until the display looks like the sample photos.

In bright ambient light the display will appear as a single vertical line moving across the screen. If you darken the room, the persistence of the phosphor screen will allow you to see the entire voiceprint.

To record the voiceprint for posterity you will need a camera. In a darkened room, simply set the camera on a tripod, open the shutter manually, allow one sample to scan on the screen, and then close the shutter. This is essentially the technique I used to produce the sample voiceprint photos that accompany this article. Unfortunately, since the Tektronix 2215 has no reticule illumination, no scale is reproduced in the photos. Keep in mind that there are eight vertical filter bands and that the x axis is half a second.

Examples of my own voiceprints wouldn't be especially helpful to you in trying to align your voiceprint system, so I have provided examples that can potentially be duplicated and compared. All the voiceprint photos here were produced using the output of a Micromouth voice synthesizer. The Micromouth, which I described in my June 1981 article, uses a National Semiconductor Digitalker speech-synthesis chip set. It has a limited vocabulary which is extremely intelligible and eminently reproducible. If you have a Micromouth, simply connect it up

and compare your results to the various prints of words and numbers shown here.

#### **Experimental Results**

What can we learn from studying the results of our simple testing? First of all, the voiceprints of speech synthesizers and people are very different. While the words sound much the same to the ear, the frequency content is rather different. This difference should not bother a computer speech-recognition system so long as the word templates are set to recognize either synthesized or natural voices. But because of its repeatable speech, the synthesizer might provide a good way to initially test a speech-recognition system.

In general, there seem to be considerable spectral differences between the words in the minimum useful vocabulary I chose as examples. Because of the great differences, a speech-recognition system could use minimally precise template data to differentiate between these words.

Consider how a computer could store these voiceprints as word templates. An A/D converter could be used to read the filter values. Storing the output values from 128 scans of eight filters requires 1024 (1K) bytes for each word, assuming the use of an 8-bit A/D converter. The amount of memory required can be reduced by eliminating the dead air time at the beginning of words and between the sounds contained within a word.

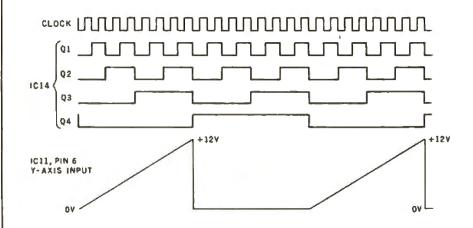

Figure 6: Timing diagram of the voiceprint-recording system.

# MICRO-SCI IS IN THE GAME FOR ALL THE APPLES...

## ...WITH A FULL HOUSE OF 51/4" DRIVES

Micro-Sci has three disk drives and two controllers so you can configure your Apple II<sup>ro</sup> or Apple II Plus "system to fit your individual budget and performance requirements.

and performance requirements.

THE FIRST ACE—A2

The new A2 is the price/compatibility substitute for the Disk II," intended as the second drive on an existing controller, or as a full A2 subsystem. The A2 drive or A2 subsystem is an ideal choice when the drives will be primarily used for entertainment or prepackaged software programs.

THE SECOND ACE—A40

The A40 is a price/performance alternative to the Disk II. With 40 tracks, you get an additional 20K bytes, and faster track-to-track access. The A40 is intended for use in dedicated DOS, CP/M and Pascal applications, and as a companion drive for the A70. The A40 is Micro-Sci's most cost-effective

disk subsystem for the Apple IIs.

THE THIRD ACE — A70

The A70 is the price/capacity alternative.

At over a quarter million bytes per drive, the A70 has the capacity of two Disk ils or an eight-inch toppy, but costs only slightly more than a single Disk II. One A70 supports a DOS file as large as 270K, a CP/M file up to 254K, and 560 blocks

THE PAIR — MICRO-SCI'S CONTROLLERS
The A2 comes with a unique new controller.
This controller supports any combination of A2s or
Disk Ils, you have complete flexibility.
The A40 and A70 share a common controller.
Mix A40s and A70s in any fashion, one A40 with
one A70, two A40s or two A70s — all on the

You can have a Disk II or A2 controller with

Disk II or A2 drives and still add an A40 or A70 subsystem. That's tull system-level compatibility.

THE PAT HAND

Versatility, reliability, capability are assured when choosing Micro-Sci. Pick the drive, pick the controller, pick the capacity and function. Whatever your need, DOS 3.2, 3.3, Pascal, CP/M, games or pre-packaged software, Micro-Sci has the drive. Start wherever you choose with the knowledge that you can expand without concern. All Micro-Sci-products are backed by a full 120-day warranty (parts and labor).

(parts and labor).
Our complete line of Apple compatible products makes us the dealer's choice. We're always looking

for good dealers. International dealer inquiries: International Markets Co., Telex: 69-6191.

# Announcing 23 new Microboard products.

Now there are over 70 Microboard problem-solvers from "Old Reliable".

These new products will help you to use the power of board-level computers to solve many more of your application problems.

Color development system.

The first color development system for 1802-series microprocessors. Ideal for developing your own 1802 microprocessor, Microboard, or color video applications.

Software development and screen editing made easy by colors that distinguish your inputs from computer responses. Unique cursor, prompt, and background color identify Monitor and Program Development modes. Expandable with any RCA memory or I/O Microboard. Firmware includes floating-point BASIC3, ROM-based assembler/editor, and monitor.

The CDP18S695V1 comes complete with color monitor, full keyboard and promprogrammer for only \$1499.\*\* Other models as low as \$499.\*\* at that price the system is an ideal BASIC language controller.

#### New I/O interface.

Opto 22\* module interface Microboard CDP18S662 provides 24 bidirectional parallel I/O lines. Solves your power problems by interfacing directly with industry-standard optically isolated plug-in modules and racks.

Unique circuit design enables you to select the direction of each signal line. No Microboard changes or programming required.

Innovative built-in interrupt structure can be programmed to generate an interrupt in response to a change in one or more signal lines.

#### Five new Microboard computers.

Based on the new 1805 microprocessors with built-in counter/ timers. The new counter/timer features include real-time event counter, pulse-duration timer and program decrement counter.

And these new microprocessors have 22 additional powerful instructions, including one-instruction call and return, and 4 instructions to load and store 16-bit words.

We've put these features of the 1805 to work for you on five new Microboards. Each is a complete computer system, with read-write memory, parallel and serial I/O ports (available on 4 of the 5), power-on reset, expansion interface and ROM sockets.

Ideal for solving your 1805 or 1806 microprocessor prototyping needs, or for systems requiring timers and counters.

#### Industrial chassis series.

Designed to stand up to tough industrial environments. Seven sizes, from 4 to 25 slots. Built-in Universal Backplane accepts all Microboards.

Mounting methods almost unlimited: 19" rack, NEMA enclosure, backwall mounting and even desk-top models.

Every industrial packaging problem known to us was carefully considered, resulting in a really useful small, compact, front access, protected family.

Two initial optional modules make these chassis even more versatile: A self-contained, plug-in power supply that will accept 110-volt or 220-volt AC input to provide all logic and analog supplies needed for Microboard cards.

And a Microboard I/O module card which mounts into a 4-slot segment of the chassis, and holds up to 8 industry-standard optically isolated power modules in any mix of AC or DC input or output signals. Complete with mating 4-slot cover with barrier strips for power connections.

These new products are part of our ongoing commitment (39 new products in 1981) to develop and produce the devices you need to put the flexibility and power of board-level computers to work solving your problems.

And of course, our Microboards give you the bonus of CMOS low power and -40°C to +85°C operating temperature range at no additional cost.

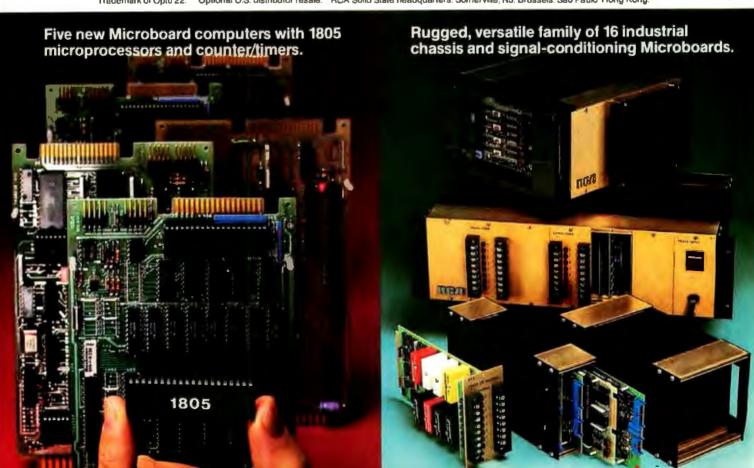

For more information, contact any RCA Solid State sales office, representative or distributor.

Or call (800) 526-3862.

Circle 338 on inquiry card.

Perhaps storing the output amplitude of the filters is unnecessary, and a simple threshold detector would be sufficient. A logic 1 could indicate that there is some spectral content in that frequency range while a logic 0 indicates none. The eight instantaneous filter outputs could then be stored in a single byte rather than eight. This translates into a memory requirement of 128 bytes per sample period. This presumes that information about the frequency content of speech with respect to time is more important than information about the amplitude of the energy in the different frequency bands. I think it will depend a lot upon the vocabulary chosen.

Finally, I saw little activity in either the 31-Hz or the 4-kHz band in speech both from my own voice and from the Micromouth. This may be a limitation of the hardware, but I think it would be safe to eliminate these passbands from any voiceresponse system. In my experience, the three frequency ranges that seem to always contain the most energy are about 60 Hz to 200 Hz, 200 Hz to 500 Hz, and 1 kHz to 2 kHz. I am at present unwilling to design a speechrecognition system with only three sampling passbands, but I'm still gathering data.

#### In Conclusion

I haven't yet decided how I will configure my speech-recognition system. I have only one major design criterion so far: because writing comprehensive software algorithms isn't among my greatest pleasures in life. I will attempt to do as much in hardware as I can,

Perhaps if I stall long enough a few inexpensive integrated circuits that can do it all will emerge from Silicon Valley. I have heard promising reports on a few such products. I know of the intense interest many of my readers have in the subject, and I intend to build a speech-recognition system as soon as I can make it costeffective.

I hope that this article has at least helped you understand some of the first steps in speech recognition. If

you are talented in software, you may have been inspired with an idea that will make the process easy. But at any rate, I hope to have helped allay any suspicions that computerized voice response is a black art.

#### Next Month:

New technological developments have made infrared light a convenient medium for remote-control or data transmission. We'll explore how to

# The Performance Leader ... Model 925

Now you can have it all with TeleVideo's new 925. Code compatible with our 910 and 950 terminals, the 925, with its 6502 microprocessor-based control board can emulate our 912/920 models while operating at speeds up to 19.2K baud. This allows you to grow within the TeleVideo family of terminals, from the conversational to the smart.

The 925, a modular designed unit that uses the same power supply, monitor, and keyboard as the rest of TeleVideo's family, has built-in proven reliability and quality from beginning to end. TeleVideo's P31 nonglare, tiltable, green screen and detached selectric style keyboard make the 925 a comfortable, low stress terminal to use.

They offer you options; we give you standard features like RS232 printer port, X-on/X-off control, 22 function keys, user line, 25th status line with setup mode, local duplex edit modes, and many more.

Nationwide service is available from General Electric Company Instrumentation and Communication Equipment Service Centers.

Contact TeleVideo today for information on the Performance Leader, the 925!

# CompuView

# New! CP/M-86 For IBM Personal Computer

The first available CP/M-86 for the IBM Personal Computer has the capabilities you need, including serial and parallel printer support, a 'smart' screen driver which can emulate most popular CRT terminals, 193K disk capacity and the facility to read/write the common XEROX 820 disk format. Innovative features include built in horizontal scrolling and screen line editing which lets you extensively edit or re-enter your typed lines to CP/M and application programs. (Available March 15, 1982)

CompuView CP/M-86 for IBM Personal Computer. . . \$325 VEDIT-86 with above purchase. . . . . . . . . . . . \$100

### 8086 Software

- VEDIT full screen editor for CP/M-86, SCP 86-DOS and IBM Personal Computer. Disk and Manual \$195
- CP/M-86 BIOS for popular S-100 disk controllers and SCP 8086 computer.
   Source Code \$90

## V-COM Disassembler

Finally a Z-80 disassembler for CP/M which produces easy to read code, a cross reference table and handles INTEL and ZILOG mnemonics. V-COM is exceptionally fast and produces an .ASM file directly from a .COM file. V-COM can accept two user created information files. One contains assignments of labels to 8 and 16 bit values; the second specifies the location of tables and ASCII strings. The resulting .ASM file will then contain labels and proper storage allocation for tables and strings. Each information file may contain nested 'INCLUDE' to other files. Each package includes a 30 page manual, sample program files and variations of V-COM compatible with the TDL, MAC and two types of ZILOG assemblers.

### PIICEON 24x80 S100 Video Board

The PIICEON V-100 offers memory mapped speed, but being I/O mapped, uses no memory space nor bank select. Lower case descenders, hardware scrolling and other features. Fully assembled with 1 year warranty by PIICEON the company known for reliability.

# Software An Industry Standard for CP/M & 8086

## Uniquely User Oriented

VEDIT is user oriented to make your editing for program development and word processing as fast and easy as possible. The customization (installation) process makes VEDIT the only editing package that allows you to determine your own keyboard layout and use any available cursor and function keys. Just think of the difference it makes in your ease of learning and usage to type cursor and function keys instead of memorizing obscure control characters. This customization is menu driven, extends to much more and takes only a few minutes.

# Unequaled Hardware Support

The CRT version directly supports over 35 terminals (including ANSI standard) in its installation menu and utilizes 'smart' terminal features such as line insert/delete. reverse scroll, status line and reverse video. Function keys on terminals like the Televideo 920/950, Heath H19, and IBM 3101 are all supported. The memory mapped version is extremely flexible, supports bank select such as on the SSM VB3 and screen sizes up to 70 X 200.

# Sophisticated Full Screen Editing

VEDIT gives you true 'what you see is what you get' full screen editing with an extensive set of features for creating and editing standard text files of up to one diskette in length. Very large files are effortlessly handled by VEDIT's ability to edit up to 47K of a file entirely in memory without performing any slow and annoying disk accessing. And you can handle multiple files, insert a specified line range of another file anywhere in the text and even change diskettes.

## User Oriented **Features**

You get the features you expect, like searching, a scratchpad buffer for moving and rearranging sections of text, complete file handling on multiple drives and flexible macros. For ease of use VEDIT has features you won't find elsewhere, like automatic indenting for use with structured languages such as Pascal and PL/I. You are less likely to make a mistake with VEDIT, but if you do, one key will 'Undo' the changes you just made to a screen line. And if you run out of disk space with VEDIT, you can easily recover by deleting old files or even inserting another diskette. It is therefore no surprise that VEDIT is the industry standard for program development editing.

# Word Processing

VEDIT is suitable for simple stand-alone word processing, or it may be used in conjunction with a text processor. Its features include word wrap, adjustable left margin, reformatting of paragraphs, word oriented cursor movement and deleting, and imbedding of printer control characters. VEDIT can print any portion of your file and display the cursor's line and column positions.

Now for **IBM** Personal Computer XEROX 820

# Apple Panic

Gregg Williams Senior Editor

Personality—it's a major factor in distinguishing arcade best-sellers from the ones that lie around gathering dust in a corner. In coinoperated arcade games, it is not the only factor in determining success-anything with enough color, sound, and action will attract an adequate following. However, personality is a greater factor in microcomputer-based arcade games because they have fewer distracting frills. Of the many games I've seen in the past six months, Apple Panic has far more personality than any of several equally well-done games for the Apple II or II Plus microcomputers. Additionally, Apple Panic is an original game. It is not just a simplified copy of a coin-operated game. As a game that's available only for microcomputers, you can show it off to coin-op game snobs.

Like many successful arcade games, Apple Panic has a simple but eccentric premise. Your player is trapped in a world of walkways and ladders. The objective is to keep your player alive as long as possible. Of course, no arcade game is complete without a merci-

Photo 1: An "apple" is knocked through a hole by the human

player,

less enemy, and Apple Panic is no exception. Your enemies are a number of flattened "apples" (similar to Terrapin Turtle robots) that roam the walkways and ladders. They aren't terribly bright, but what they lack in intelligence they make up for in number, How do you fight back? By digging a hole in the walkway, waiting until an apple drops into it, and then knocking it through the hole to smash on the walkway below.

You control your player's movement by using the "I," "J," "K," and "M" keys. To dig a hole, hit the "A" key while your player is moving. (For some reason, your player does not always dig a hole when you want it to. Although this is probably the result of simplifying the game's algorithm to a manageable size, I look on it as a chance to develop my expertise in the game.)

Once an apple falls into the hole and sticks there, you have several seconds to return to that hole and knock the apple through by hitting the "S" key; if you line up two or more holes well enough for the apple to drop through all of them,

you get bonus points that increase with each extra hole used. When an apple falls through a hole, the walkway is mysteriously repaired; see photos 1a and 1b. (You didn't expect this to be easy, did you?) In addition, if you don't get to a stuck apple in time, the dumb but industrious critter pulls itself out of the hole and repairs the walkway.

Although the apples are slow, they don't waste any opportunities. If they get close enough, they pounce on and eat your player. The screen is then redrawn with a different arrangement of ladders and apples, and you start over. On successive screens, you usually get more apples on the screen. If you get good enough, two new predators, the Green Butterfly and the Mask of Death, appear; the latter appears only if you are very good. You get more points for killing them, but they are more difficult to kill. The Butterfly must drop through two holes

Audience Arcade enthusiasts of all ages before it is eliminated: if it drops from one hole to the walkway immediately below, it continues walking as if nothing had happened. (You get an extra player life when you kill a Butterfly.) The Mask of Death is even more difficult to kill; it must fall through three holes before it is destroyed.

One final note on the mechanics of the game: your player can fall through a hole without injury. This is sometimes useful as an escape route because the apples can't follow.

#### Strategy

Timing is very important in this game. It takes a certain amount of time to dig a hole or knock an apple through a hole. If you underestimate the amount of time needed when an apple is nearby, it may get you before you get it.

Another element of your strategy is the placement of holes with respect to ladders. On one hand, you like to have a hole between you and every apple. On the other hand, if an apple falls into a hole on the other side of the screen. those same holes may prevent you from getting to the trapped apple in time. After hastily digging a hole, you may find that it is now impossible to get to an entire section of the screen. Also, the strategy of going to the end of a walkway, digging a hole between you and the center of the screen, and waiting for an apple to come after you usually doesn't workthe apples aren't smart enough to sense you unless you are nearby.

#### Conclusions

Apple Panic is an interesting. playful game. It is interesting to note that, like Pac-Man (a game similar in spirit), it uses engulfment as the main form of destruction. This is very different from the majority of games, which have objects shooting projectiles at each other.

Apple Panic makes good use of both graphics and sound. When walking, the player does not flicker (as it would with less skillful animation). Nearly constant sound effects keep the ear entertained without assaulting it.

Even when played by a novice, this game usually lasts longer than most other arcade-style games. Although the apples will eventually overwhelm you, split-second reflexes are not as important here as they are in other games. A normal game of Apple Panic lasts from five to fifteen minutes; it lasts longer as you get better. Therefore, while still being entertaining and engaging, Apple Panic will not leave you a nervous wreck when the game is over. (Well, less of one, anyway.)

I do have a criticism, however, This game does not have the features that allow you to indefinitely pause while you turn the sound effects off. Granted, one game can't have everything, but these easily implemented features are becoming more common on Apple games. Game designers should take note.

Apple Panic is a copy-protected disk that boots directly on either 13- or 16-sector Apple computers. Broderbund Software pledges to replace the disk free of charge if it fails to boot and to replace it for a minimal charge if the disk is ever physically damaged. This is another policy that should be encouraged. It takes away many of the objections about copy-protected disks for programs of this nature.

It should be reemphasized that Apple Panic is an original game, not a copy of an arcade game, If the current trend away from microcomputer games adapted from coin-operated arcade games continues, the work of authors and companies that produce high-quality original games will become more important.

# Missile Command

Stanley I. Wszola Technical Editor

As your left thumb stabs at the firing button, your right hand spasmodically tries to control the cursor. You see flashes of light, hear bursts of sound, and finally it's over. You've done it, racked up your best score ever playing Missile Command. Have you ever wondered why Missile Command is such a popular game? Despite the claims of Atari that its

development was a long process, there are other reasons for its success. In this review, I'd like to touch lightly upon some of these reasons.

If you have never pumped a quarter into a video arcade game, or don't own an Atari 400 or 800 microcomputer, I'll briefly describe the game. The Missile Command game for the Atari 400 and 800 is an adaptation of the commercial arcade game. You become the commander of a missile base with armaments consisting of ABMs (antiballistic missiles). You must preserve your six cities and missile base from nuclear attack by destroying the incoming enemy missiles and bombs.

The enemy is armed with ICBMs (intercontinental ballistic missiles), MIRVs (multiple independently targeted reentry vehicle ICBMs), killer

satellites that drop missiles, bombers, and smart missiles that can evade your ABMs and home in on their targets.

The enemy attacks come in waves. Each wave lasts from 30 to 45 seconds. The waves become increasingly more difficult as the game progresses, with the sixth wave introducing you to the smart missiles.

You are provided with 30 ABMs per wave. These are launched against targets by using the joystick to control a cursor on the screen. When a missile, bomber, or satellite appears. you position the cursor over or near the target and press the fire control button. Your missile base launches an ABM toward a detonation mark left by the cursor on the screen. The resulting atomic fireball, complete with the simulated sound of a nuclear explosion, will destroy the incoming missile or other target. That is, if your aim was true, if you allowed for a moving target, if you hadn't already used all your ABMs, and if the target wasn't smart enough to get out of your way (smart missiles),

The game allows you to select one or two players. The computer automatically keeps score and remembers the highest score while the game is continuing. You have the option of skipping the easier waves of

Photo 1: Missile Command, one of the most popular coin-operated arcade games, is now available in a cartridge for the Atari 400 and 800 microcomputers. The trackball of the coin-operated version has been replaced by an Atari joystick. Also, you have only one missile base (not three), but the sights, sounds, and action of the original game are still there.

enemy attacks. For example, you can practice shooting down nothing but smart missiles.

The object of all this nuclear mayhem is to accumulate points. Points are scored for every enemy weapon destroyed and for every city and ABM left at the end of each wave. Every two waves, a wave point multiplier increases the value of each point by as much as six times. Every time you earn 10,000 points, you get another city to replace one that was previously vaporized.

#### Why Is It Successful?

Though none of the editors on the BYTE staff advocate nuclear war, we all agree that Missile Command is a good game. Yet we agree for different reasons, and therein lies the reason for the game's success.

Some people enjoy the competitiveness of trying to better another person's score. Others enjoy the interaction between human and computer. And some enjoy the lights, noise, and the satisfaction of symbolically blowing things up. My enjoyment stems mostly from not having to pump quarters into the computer.

#### The Critics

There are those who object to the overt violence implicit in the game. After all, the destruction of cities is a very violent activity. A friend of mine once said that games of this type only encourage the acceptance of warfare as a viable solution to problems that could be settled peaceably. I asked if he ever played chess.

The revolutionary Discovery multiprocessor is the only system that allows the total integration of powerful 16 bit 8086 processors with the more standard Z-80 user processors. The DISCOVERY system may be configured in any 8 bit/16 bit combination, or as a totally exclusive 16 bit system only to provide the ultimate in performance and flexibility in advanced micro systems.

**Ultimate performance.** The dpc-186 is the most sophisticated single board microcomputer available today offering more power and faster processing time through the 8086 CPU for bigger, more complex programs. Memory starts at 128 K (compared to the Z-80's 64 K), and is expandable to 1 megabyte. And the dpc-186 is fully compatible with the standard DISCOVERY multiprocessor system permitting efficient upgrading as future needs develop, without sacrificing any of your extensive hardware and software investment.

World's best multiprocessor system. The DISCOVERY system provides separate processors and memory for each of its 16 users. It offers full CP/M"and CP/M-86" compatibility, interprocessor communication, and shared and private files. Each user can take advantage of shared peripherals and cross submitting of tasks between processors. The system is controlled by a unique, two board dpc-280 service processor and dpc/os distributed processing operating system.

By the board or by the system. The DISCOVERY multiprocessor is ready for immediate delivery as a complete system, as processor boards, and everything in between. It offers exclusive technology in multiprocessing, yet is fully compatible with existing standards including CP/M and S-100. It is quite simply unmatched in performance, capabilities and offers a far greater degree of flexibility.

DISCOVERY - offering a whole new world of possibilities.

#### For the first time, 8 and 16 bit processor intermixing.

When he said yes, I then asked if he thought his aggressive activities on the chessboard affected his actions in real life. A very spirited discussion then ensued, with neither of us convincing the other to change his views.

Whether the designers of Missile Command intended to or not, they have presented a game that reflects contemporary society. The game takes the threat of nuclear warfare and, simplifying the concept to the extreme, reduces that threat to a man-

ageable human level. Whether this familiarity with nuclear warfare is good or not, I don't know, However, it doesn't seem to have affected the popularity of the game.

#### Conclusion

Missile Command is a great success, and Atari should be congratulated on producing such a highquality product. However, it is only a temporary success. Programmers are constantly working on newer, better games. My advice to them is to carefully examine the current successes and determine why they work. Then, taking their own original games, incorporate those ideas in their own programs.

With the advent of new microcomputers and with the foundations for software development already well established, the potential for creative programming is greater than ever. I am excitedly awaiting what's coming next.

#### Dino Wars

#### George Stewart Technical Editor

If any computer game deserves the title "action game," this one does. Dino Wars is a two-player game in which each player controls a ferocious dinosaur that attempts to bite the other player's dinosaur until it cries uncle. Although there is no gore and the losing dinosaur always survives, the combat between the two creatures seems vicious at times.

The battle takes place on a desert plain decorated with several clumps of cactus. However, this is not your ordinary cactus. If a dinosaur mistakenly runs into one, the creature falls over and loses five units of fighting energy. Perhaps it's fossilized.

Although the terrain is much larger than the field of view displayed on the screen, it is not infinite. If a dinosaur exits to either the left or the right, it eventually reemerges on the opposite side of the screen. Even if not visible on the screen, battles can rage in full force and dinosaurs can trip over unseen cacti.

The dinosaurs are chunky creatures (low-resolution is the term used outside of the prehistoric epoch) modeled after Tyrannosaurus rex. One is purple, the other blue, (An alternate color set is available for variety,) Although not the most graceful of animals, they can swing their tails menacingly, open their jaws to bite, and swagger around the screen in any direction.

The game is three-dimensional. As a dinosaur recedes into the background, it becomes smaller, eventually shrinking to the size of a dot. As it advances, its size increases to a stage where it consumes much of the screen.

Toysticks are used to control the combatants. Although these joysticks permit 360 degrees of apparent control, the dinosaurs can actually move in only six directions. As a result, they appear to hop from one stance to another.

The object of the game is to bite the

other dinosaur while it is vulnerable, i.e., while it has its back turned or is recovering from a nasty fall over a cactus (the Marquis of Queensberry rules don't apply in this primitive world). After sustaining an effective bite, a dinosaur falls to the ground with a resounding crash.

When two experienced players control the dinosaurs, the battle resembles an awkward ballet, with the dinosaurs constantly circling each other while vying for a shot at each other's weak point. When beginners play, the action is more likely to resemble a pastoral scene in which the two dinosaurs wander around aimlessly, occasionally engaging one another with little effect and separating again.

To make a dinosaur bite, you press the joystick button. The dinosaur issues an awesome roar as it closes its jaws on air, cactus, or the opposing dinosaur. Generating this sound is one of the more satisfying aspects of the game.

Both dinosaurs start out with 100 units of energy. Each time a dinosaur is successfully bitten in a clinch, it loses 20 points; if bitten while recovering from a cactus fall, 10 points; falling over a cactus costs five points. The game ends when one of the dinosaurs loses all its points.

A prerequisite to enjoying this game at length is a sense of the ridiculous. Without that, you are apt to become frustrated by some of its limitations. For example, while either dinosaur is roaring, all action on the screen halts because the Color Computer's microprocessor is totally preoccupied with the task of generating the sound (a hardware limitation).

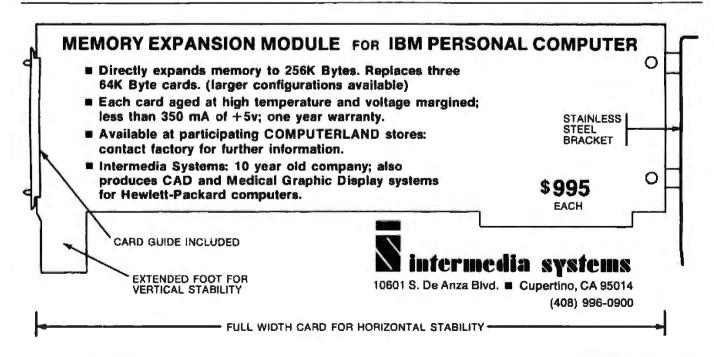

Here are bite-by-bite reports from two noteworthy dino wars.

In the first battle, one player was an expert, the other a beginner. This quite typical case corresponds to computer owner and friend. The expert player used a sneak-attack strategy: his dinosaur stayed just off-screen until the beginner's dinosaur presented a vulnerable back. Then the expert's dinosaur lunged into view, bit effectively, and retreated again. Five such attacks were enough to send the beginner's dinosaur into squeaking submission (a defeated

dinosaur always runs off yelping toward the horizon).

In the second battle, two jaded players searched for a nonviolent use of the game. The cactus provided an answer. A dinosaur can become hopelessly entangled in a cactus; each time it gets up, it immediately falls down again, losing five points each time. Accordingly, the object of this absurd battle was to be the first to expend all one's energy in mortal combat with a cactus.

Dino Wars is primarily a novelty, but a good one. It allows two players to work off all sorts of aggressions toward each other and plant life. However, it is not a game you can grow with; it doesn't take long to "peak out." It is not an intellectual game like Adventure, nor does it get your adrenaline going as does a fast-paced game of Star Raiders. Compared to one of these, you might say Dino Wars is prehistoric.

# One of the great masters?

Although the Datasouth DS180 matrix printer may not exactly rate as a work of art, our customers have a very high opinion of its value. Over the past year, we have shipped thousands of DS180 printers to customers throughout the world. Many of our sales now come in the form of repeat business — a strong testimonial to the acceptance of a product.

The success of the DS180 in a very competitive market did not happen by accident; rather through our sensitivity to the needs of the industry. This sensitivity we carry through research and development, production and quality con-

trol and finally to after sales support and service.

Recently we introduced new enhancements to make the DS180 printer even more versatile. Dot addressable raster scan graphics produces output of computer generated charts, maps and graphs at a resolution of 75 x 72 dots per

inch. Variable horizontal pitch selection allows printing at 10, 12 or 16.5 characters per inch plus double wide printing at 5, 6 or 8.25 characters per inch. The expanded 2K FIFO print buffer handles a full CRT screen dump at up to 9600 baud without delaying the host system. We also offer transparent mode for isolating communications problems, and for APL users, the dual ASCII/ APL character set option.

Check our list of features and we think you will agree that the DS180 offers the most complete performance package in matrix printers.

OPTIONAL FEATURES

- DST80 PRINTER STANDARD FEATURES

  -Microprocessor Control
   180 CPS Prior Speed
   Bidirectional Logic Seeking
   1000 Character Buffer (Expandable)
   1000 Character Buffer (Expandable)
   9x7 Dot Marix
   Expanded Characters
   Adult Line Feed
   Auto Line Feed
   Aut

The DS180 is available nationwide through our network of sales/service distributors.

#### The Atari Tutorial

#### Part 7: Sound

Bob Fraser 1639 Martin Ave. Sunnyvale, CA 94087

The Atari 400 and 800 home computers have extensive hardware sound capabilities. Four independently controllable sound channels are able to play simultaneously. Each channel has a frequency register determining the note and a control register regulating the volume and the noise content. Several options allow you to insert high-pass filters, choose clock bases, set alternate modes of operation, and modify polynomial counters. This article will explain these options; next month, part 8 will show how to call these options from both BASIC and 6502 machine language.

#### **Definitions**

For the purposes of this discussion, a few terms and conventions need to be clarified:

1 Hz	is 1 pulse per
(hertz)	second
1 kHz	is 1000 pulses
(kilohertz)	per second
1 MHz	is 1,000,000 pulses
(megahertz)	per second

A pulse is a sudden voltage rise followed somewhat later by a sudden voltage drop. If a pulse is sent to a television speaker, it will be heard as a single pop.

A wave, as used here, is a continuous series of pulses. Different types of waves exist, each of which is distinguished by the shape of the in-

The smaller poly counters repeat often enough to create droning sounds that rise and fall quickly.

dividual pulses. Waves created by the Atari computer are square. Brass instruments typically produce triangular waves, and a human voice produces sine waves.

A shift register is like a memory location (in that it holds binary data) that, when so instructed, shifts all its bits to the right by one position (i.e., bit 5 will get whatever was in bit 4, bit 4 will get whatever was in bit 3, and so on). Thus, the rightmost bit is pushed out, and the leftmost bit assumes the value on its input wire (see figure 1).

"AUDFn" is read "any of the audio frequency registers, AUDF1 through AUDF4." Their addresses are, respectively, hexadecimal D200, D202,

D204, and D206 (decimal 53760, 53762, 53764, and 53766).

"AUDCn" is read "any of the audio control registers, AUDC1 through AUDC4." Their addresses are, respectively, hexadecimal D201, D203, D205, and D207 (decimal 53761, 53763, 53765, and 53767).

For the purposes of this discussion, frequency is a measure of the number of pulses in a given amount of time; that is, a note with a frequency of 100 Hz means that in one second exactly 100 pulses will occur. The more frequent (hence, "frequency") the pulses of a note, the higher the note. For example, a singer vocalizes at a high frequency (5 kHz), and a cow moos at a low frequency (100 Hz). The words "frequency," "note," "tone," and "pitch" are used interchangeably.

Noise and distortion are also used interchangeably, although their meanings are not the same. Noise is a more accurate description of the function performed by the Atari computer.

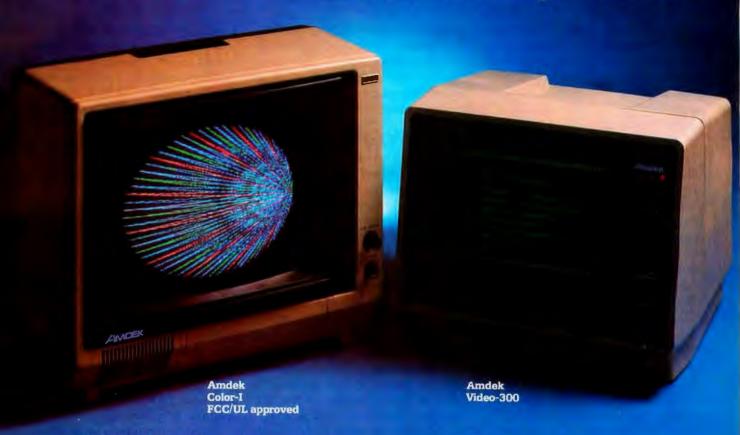

All examples are in BASIC unless

This article appears in slightly different form in De Re Atari, published by Atari Inc., and is reproduced with its express permission.

# Amdek

From picture perfect.

To letter perfect.

At Amdek, we make monitors for people who demand state-of-the-art color. And for people who know that crisp, clear text display is an art in itself.

Our versatile Color-I 13" video monitor features standard NTSC composite input, front-mounted controls and a built-in speaker with audio circuit. Our popular Video-300 12" Green Phosphor monitor has an easy-to-read, non-glare screen, 18 MHZ band width and 80 x 24 character display.

Both offer easy portability, with lightweight cabinetry and molded-in handles. And both are fully

compatible with most computer and word processing systems. So compare our performance with other monitors. Then compare prices. For quality and value, you'll choose Amdek.

NEW THIS FALL: our advanced high resolution Color-II monitor with interface board for Apple II compatibility. Color-II features RGB, TTL input and 560(H) x 260(V) resolution for crisp 80 x 24 character display and exceptionally sharp color graphics. Ask your dealer about an Amdek Color-II, Color-I, or Video-300 monitor today.

2420 E. Oakton Street, Suite "E," Arlington Heights, Illinois 60005 (312) 364-1180 TLX: 25-4786

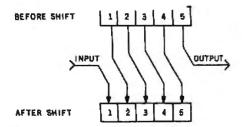

Figure 1: Operation of a shift register. Here, all bits are shifted one bit to the right. As the rightmost bit is lost, some external value fills the leftmost bit.

otherwise stated. Type the examples exactly as they appear. If there are no line numbers, don't use any; if several statements are on the same line, type them as such.

#### Sound Hardware

Sound is generated in the Atari computer by the POKEY chip, a custom integrated circuit designed especially for the Atari 400 and 800; POKEY also handles the serial I/O bus and the keyboard. The POKEY chip must be initialized before it will work properly. Initialization is required after any serial bus operation (cassette, disk drive, printer, or RS-232C read/write). To initialize POKEY in BASIC, execute a null sound statement; that is, SOUND 0.0.0.0. In machine language, store a 0 at AUDCTL (hexadecimal D208 = decimal 53768) and a 3 at hexadecimal 232 (decimal 562); this is the shadow location for the SKCTL register at hexadecimal D20F (decimal 53775).

#### The Audio Frequency Registers

Each of the four audio channels has a corresponding frequency register that controls the note played by the computer. The frequency register contains the number N used in a divide-by-N circuit. This is not a division in the mathematical sense, but something much simpler: for every N

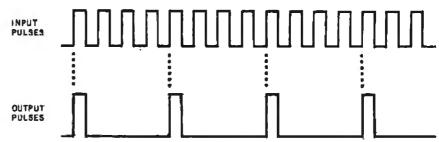

Figure 2: An example of a divide-by-4 process. The circuitry for this process allows only every fourth pulse to pass through.

pulses coming in, one pulse goes out. For example, figure 2 shows a divideby-4 function.

As N gets larger, output pulses become less frequent, making a lower frequency note.

#### The Audio Control Registers

Each channel also has a corresponding control register. These registers allow the volume and distortion content of each channel to be set. The bit assignment for AUDCn is given in table 1.

#### Volume

The volume control for each audio channel is straightforward. The lower 4 bits of the audio-control register (AUDCn) contain a 4-bit number that specifies the volume of the sound. A zero in these bits means zero volume; a fifteen means as loud as possible. The sum of the volumes of the four channels should not exceed thirty-two because this forces overmodulation of the audio output. The sound produced tends to actually lose volume and assume a buzzing quality.

#### Distortion

Table 1 also shows that each channel has three distortion-control bits in its audio-control register. Distortion is used to create special sound effects any time a pure tone is undesirable. The computer's use of distortion offers great versatility and control. It is easy to synthesize an almost endless variety of sounds, from rumbles, rattles, and squawks to clicks, whispers, and mood-setting background tempos.

Distortion, as used here, is not equivalent to the standard interpretation. For example, intermodulation distortion and harmonic distortion are quality criteria specified for highfidelity stereo systems. These types of distortion refer to waveform degeneration, where the shape of the wave is slightly changed due to error in the electronic circuitry. The computer's distortion does not alter waves (they are always square), but rather deletes selected pulses from the waveform. This technique is not adequately characterized by the word "distortion." A more descriptive and appropriate term for these distortion methods is "noise."

Before you can fully grasp what we

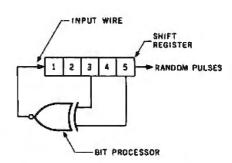

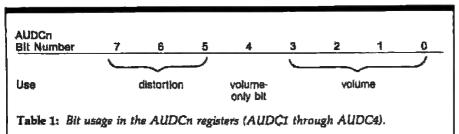

Figure 3: An example of a poly counter. By letting the new leftmost bit be determined by some algorithm (here, an exclusive NOR of bits 3 and 5), a poly counter can produce a semirandom stream of bits. The pattern of the bits will eventually repeat, but the length of the pattern depends on the width in bits of the poly counter.

# The IBM Personal Computer

# Personal, Professional, Technical — or somewhere in between ... PC-MATE™ makes the IBM Personal Computer a perfect match

PC-MATE" from TECMAR is the first and only complete expansion series available for the IBM Personal Computer. There are currently more than twenty PC-MATE" expansion options available, and new products are continuously added to the list.

When you want more from your IBM Personal Computer, look to PC-MATE".

You can create a SUPER PERSONAL COMPUTER with household lights and appliance control, voice output, and give it more memory than any ordinary personal can handle.

Or make it a PROFITABLE PROFESSIONAL SYSTEM with expansion space and a Winchester disk to handle more business accounts. Increase memory up to

the system limit and process those accounts faster. Add flexible I/O interfaces and put yourself on line to outside information sources.

As an INTELLIGENT LABORATORY TOOL with interfaces to IEEE 488 instrumentation, analog signals, stepper motors and video signals, your IBM Personal Computer becomes the perfect workbench assistant.

Hardware, Software, Accessories — PC-MATE<sup>®</sup> provides the highest quality and the greatest possible range of functionality for the IBM user.

Ask your local computer store for more information on the PC-MATE<sup>10</sup> series from TECMAR, or call for the name of your nearest authorized PC-MATE<sup>10</sup> dealer.

# NOW THAT YOU'S FIRST GEN TAKE A LOOK

Welcome to a tour of the biggest Apple. The Apple III Personal Computer — the most

powerful machine in its class.

Because it's the only personal computer that lets you add up to 256K RAM, hang on a full complement of peripherals, and still have four expansion slots left for future growth. (Unlike some micros which become woefully "slot-bound" when upgraded to maximum memory.)

Because it's the only machine now using 64K RAM chips to keep 256K tidy on a single board.

And because it's the only machine that gives you the help of SOS.

#### THE MOST SOPHISTICATED OS.

SOS is the Apple III's Sophisticated Operating System, an elegant software interface that frees you from most system control tasks. It features a hierarchical file system, device- and user-level interrupt capabilities, a device-independent file system and memory management capability.

Since all Apple III languages use SOS, they share a common disk format. So Apple III programs can merge and communicate—a Pascal application program can directly access a BASIC text file, for example.

# VE SEEN THEIR MIRTHI

SOS allocates system resources to make the most of dynamic memory, simplifies programming with standard device and file interfaces for all languages, and speeds software development by reducing program size and complexity.

#### OUR NEW PROFILE.

ProFile™ is Apple's new personal mass storage system—a quick, quiet 5MB hard disk ideal for software development or any mass storage application. Shown above twixt monitor and console, it comes with everything you need to get up and running, including interface card and driver software.

The III's standard built-in drive is a 140-K floppy that can be daisy-chained with three additional drives through a back panel connector. Which leaves you plenty of expansion slots for things like our new Universal Parallel Interface Card or our OEM Prototyping Card.

#### CHANGE KEYS.

The 128-character ASCII-encoded keyboard happens to be fully-programmable. So you can (with SOS) do neat things like remap it into

DVORK. Or create armies of special function keys. Or teach your Apple to write Chinese.

Its own languages already include Business BASIC, UCSD Pascal, Assembly and, soon, a powerful new COBOL-and, in emulation mode,

most languages available for Apple II.

Look up from the keyboard and you'll see our standard Monitor III green phosphor display (80 char. x 24 lines, u/l). It can show you some of the highest resolution graphics available - 560 x 192 in 16 gray scales. Or choose a color monitor, and you could be seeing 16-color graphics in high 280 x 192 resolution. HIT LIST.

We have a new edition of that monster hit, VisiCalc\*with more modeling space than any other version. Plus AppleWriter III, a powerful new word processing package. Plus a new Business Graphics package. Plus a new Mail List Manager. Plus a Pascal Utility Library that lets you take

full advantage of all UCSD Pascal features.

Plus Access III - sophisticated smart terminal software to access mainframes with asynchronous communications up to 9600 bps.

Plus Apple II emulation to access that vast

software library.

Plus, soon, a CP/M\* card to access that other vast library.

Even with all this, the Apple III's potential

remains essentially untapped.

So we're offering improved documentation, new programmer's aids, expert hotline counseling and an open channel to the industry leader in software publishing. Us.

See your Apple dealer for more information

and, perhaps, a little comparison shopping. We're sure you'll find that between our third

generation and their first, there's quite a gap.

The personal computer.

mean by distortion, you must understand polynomial counters (also called poly counters). Poly counters are employed in the Atari computer as a source of random pulses used in noise generation. The Atari computer's poly counters utilize a shift register working at 1.79 MHz. The shift register's contents are shuffled and fed back into the input; this produces a semirandom sequence of bits at the output of the shift register.

For example, in figure 3, the old value of bit 5 will be pushed out of the shift register to become the next output pulse, and bit 1 will become a function of bits 3 and 5.

The bit processor gets values from certain bits in the shift register (in figure 3, bits 3 and 5) and processes them in a way irrelevant to this discussion. It yields a value that becomes bit 1 of the poly counter's shift register.

On the Atari computer, distortion is achieved by using random pulses from these poly counters in a selection circuit. This circuit is actually a digital comparator, but the term "selection circuit" is more descriptive. The only pulses making it through the selection circuit to the output are those coinciding with a random pulse. Various pulses from the input are thereby eliminated in a random fashion. Figure 4 illustrates this selection method. A dotted line connects pulses that coincide.

The net effect is this: some pulses from the frequency-divider circuit are deleted. Obviously, if some of the pulses are deleted, the note will sound different. This is how distortion is in-

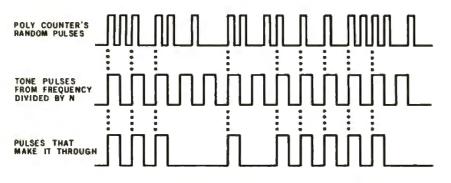

Figure 4: Using the output of a poly counter to create a noisy tone. The resulting sound of the output pulse train is considerably modified by using the poly counter output to select pulses from a pure square-wave input.

#### **OPTIONS**

#### 1. Processor

• Z8001 • 68000

#### 2. Disk Controllers

- Floppy disk controller
- Winchester disk controller

#### 3. Memory

- Memory boards from 32K to 512K
- Either processor can address up to 16 Megabytes

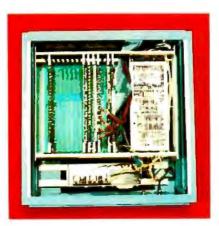

#### 4. 1/0

- Standard serial I/O board with 8 RS-232 I/O ports
- Intelligent I/O board with 8 ports, 16K dual port buffer memory, and an 8-bit I/O processor on
- Parallel I/O board with 80 bits of parallel I/O

#### 5. 15 slot mother board

- 6. Heavy duty power supply+ 5 volts at 40 amps
  - +/- 12 volts at 3.5 amps each
- 7. Meets IEEE Multibus Standard

#### THE ULTIMATE IN COMPUTER CHESS - THE MATE

#### THE MATE FOR YOUR MICRO

PMK Associates, one of the world's largest dealers of computer chess systems, is pleased to introduce an extraordinary new product for the computer chess enthusiast. The Mate is a strategy game peripheral for your Apple II\*, TRS-80† or PET‡ (TRS-80 and PET versions not available until June '82).

It comes complete with the strongest chess program, by far, ever available for a microcomputer (requires 32K), plus a true, magnetic sensor chessboard with magnetic pieces. All you do is move the pieces. The Mate senses your move, enters it into the computer, shows the move on its high-resolution graphic display and responds by lighting two LEDs. There are no distracting codes to type in during a game, and no need to apply pressure on the squares of the board.

#### UNPRECEDENTED FLEXIBILITY

Developed by Applied Concepts, Inc., whose \$600 MCT chess computer was ranked number one in playing strength in Chess Life's January '82 issue, The Mate also incorporates a wide variety of features: 9 levels of play, opening library of over 6,000 moves, computer thinks on opponent's time, Best/Randomize move selection, move suggestions, audio On/Off, move erasing, change sides dur-

ing game, reverse board, watch replay of finished game, printout entire game. And for hobbyists who want to write their own chess programs, full documentation of the interface software is provided.

As ACI continues to develop new, stronger chess programs your system can be easily upgraded. And additional programs for checkers, Reversi and other strategy games will soon be available. The Mate comes complete with sensory board, magnetic chess pieces, plug-in computer interface card, interconnecting cable, game program on cassette or disk and operation/programming manual for just \$269.95.

Each unit is covered by our 15-day home trial, money-back guarantee. And

troduced into a sound channel.

Because poly counters repeat their bit sequences, their output pattern of pulses is cyclic. And since the selection circuit uses this output pattern to delete pulses from the original note, the distorted note will contain the same repetitious pattern. This allows the hardware to create noises such as drones, motors, and other sounds having repetitive patterns.

The Atari computer is equipped with three poly counters of different lengths, which can be combined in many ways to produce interesting sound effects. The smaller poly counters (4 and 5 bits long) repeat often enough to create droning sounds that rise and fall quickly; the larger poly counter (17 bits long) takes so long to repeat that no pattern to the distortion can be readily discerned. This 17-bit poly counter can be used to generate explosions, steam, and any sound where random crackling and popping is desired. It is even irregular enough to generate white noise (an audio term meaning a hissing sound).

Each audio channel offers six distinct combinations of the three poly counters, which are listed in table 2. These upper AUDCn bits control three switches in the audio circuit as shown in figure 5. This diagram will help you understand why table 2 is structured as it is.

Each combination of the poly counters offers a unique sound. Furthermore, the distorted sounds can sound quite different at different frequencies. For this reason, some trial and error is necessary to find a combination of distortion and frequency that produces the desired sound effect. Table 3 gives you some rough guidelines with which you can begin your experimentation.

#### Volume-only Sound

Bit 4 of AUDCn specifies the volume-only mode. When this bit is set, the volume value in AUDCn bits 0 through 3 is sent directly to the television speaker; it is not modulated with the frequency specified in the AUDFn registers.

To fully understand the use of this

mode of operation, you must understand how a speaker works and what happens to the television speaker when it receives a pulse. Any speaker has a cone that moves in and out. The cone's position at any time is directly proportional to the voltage it is receiving from the computer at that

time. If the voltage sent is zero, the speaker is in the resting position. Whenever the cone changes position, it moves air that is detected by your ear as sound.

From our definition of a pulse, you know that it consists of a rising voltage followed by a falling voltage.

		Bit 5	Type of Distortion Carried Out				
<u>.</u>							
0	0	0	Divide clock by frequency, select using 5-bit then 17-bit poly counter, then divide by 2				
0	X	1	Divide clock by frequency, select using 5-bit poly counter, then divide by 2				
0	1	0	Divide clock by frequency, select using 5-bit then 4-bit poly counter, then divide by 2				
1	0	0	Divide clock by frequency, select using 17-bit poly counter, then divide by 2				
1	X	- 1	Divide clock by frequency, then divide by 2 (no poly counters used)				
1	1	0	Divide clock by frequency, select using 4-bit poly counter, then divide by 2				

Table 2: Types of distortion available from the Atari 400/800. See table 1 for the usage of other bits in each AUDCn register. An "X" in the second column of the table represents a bit that can be either 0 or 1.

AU	DCn	Bit		Examples of	Resulting Soun	d	
7_	6	5	Low frequen	icles Middl	e frequencies	High fre	quencies
a	0	a	Geiger counter		raging fire	rushing air	steam
0	X	1	machine gun	auto at idle	electric motor	power tra	ansformer
l a	1	0	calm fire	laboring auto		auto with	ra "miss"
1	0	0	building	crashing in	radio Interfere	enae	waterfall
1	X	1	pure musical tone	25			
1	1	0	airplane	lawn mower	ele	ctric razor	

Table 3: Types of sounds available from the six types of distortion available from each AUDCn register. An "X" in the second column of the table represents a bit that can be either 0 or 1.

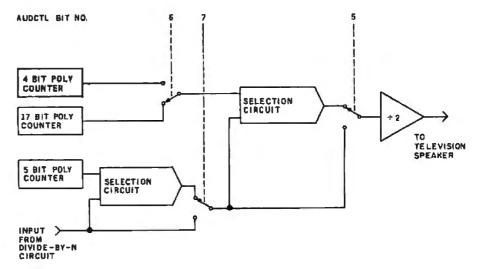

Figure 5: A schematic representation of the effects of bits 5 through 7 of the AUDCTL register on the sound sent to the television speaker.

# "WHAT IF..."

Seldom is your first solution to a problem the only one, or the one that's necessarily best to use.

That's why our VisiCalc® program is #1 in the business: the most widely-used business program ever

for the personal computer.

It's a powerful "electronic worksheet" that takes the work out of working with numbers. Whether you are working with investments, cash flow, inventory, estimates, budgets, plans—nearly anything numerical, the VisiCalc program will help you work better, smarter, faster.

In just seconds, the VisiCalc program can calculate and display the answers to involved problems you could have spent hours doing by hand.

Its speed and versatility makes it easy for you to explore more alternatives. You can ask "What if?"... just change any number in your problem and instantly, the VisiCalc program recalculates all the numbers and displays the new results. So you can

readily analyze the impact of decisions

before you make them.
While the VisiCalc

While the VisiCalc program does a lot by itself, it can do even more for you when used with the other Visi™ programs. That's because they're all inter-related, just like your needs and tasks, to give you a fully integrated solution. For example, automatically bring in data stored in our VisiFile™ program—such as customer or inventory information—for calculation and analysis with your VisiCalc program.

In addition, our series includes the

In addition,
our series
includes the
VisiTrend/Plot,™
VisiSchedule,™
VisiDex,™
VisiTerm,™
VisiPlot,™
and
Desktop/
PLAN™
programs.

Ask your retail computer store salesperson for a demonstration of the VisiCalc program. Discover how easy it is to take the work out of working with numbers.

If you sent the speaker a pulse, it would push out with the rising voltage and pull back with the falling voltage, resulting in a wave of air that can be detected by your ear as a pop. The following statements produce such a pop on the television speaker by sending a single pulse:

POKE 53761,31:POKE 53761,16

A stream of pulses (or wave) would set the speaker into constant motion. and a continuous buzz or note would be heard. The faster the pulses are sent, the higher the note. This is how the computer generates sound on the television speaker.

It is essential to note that in the volume-only mode the volume sent does not drop back to zero automatically, but remains constant until the program changes it. The program should modulate the volume often enough to create a noise. Now try the following two statements, listening carefully after each:

> POKE 53761.31 POKE 53761,31

The first time you heard a pop, as expected. The speaker pushed out and moved air. But the second time you didn't because the speaker cone was already in the extended position: an identical extension command did nothing to the speaker. Since it moved no air, you heard nothing. Now try this:

> POKE 53761.16 POKE 53761.16

As before, you heard a pop the first time as the speaker moved back to its resting position, and you heard nothing the second time because the speaker was already in the resting

Thus, the volume-only bit gives the program complete control over the position of the speaker at any time. Although the examples given above are only binary examples (either on or off), you are by no means limited to this type of speaker modulation. You can set the speaker to any of 16 distinct positions.

For example, a simple triangle wave (similar to the waveform produced by brass instruments) could be generated by sending a volume of 8 followed by 9, 10, 11, 10, 9, 8, 7, 6, 5, 6, 7, and back to 8, then repeating this sequence over and over very rapidly. By changing the volume quickly enough, virtually any waveform can be created. It is feasible, for example, to perform voice synthesis using this technique, However, this requires the use of assembly language. There is more discussion of this bit in part 8 of this series.

#### AUDCTL

In addition to the independent channel-control bytes (AUDCn), an option byte (AUDCTL) affects all four channels. Each bit in AUDCTL is assigned a specific function, as shown in table 4. AUDCTL is at location D208 hexadecimal, 53768 decimal,

#### Clocking

Before proceeding with the explanations of the AUDCTL options, a

# More Moden Less Moola

Our new LEX-11 was designed for the professional. Yet its economical \$175 price tag makes it affordable for small businesses and personal use, as well,

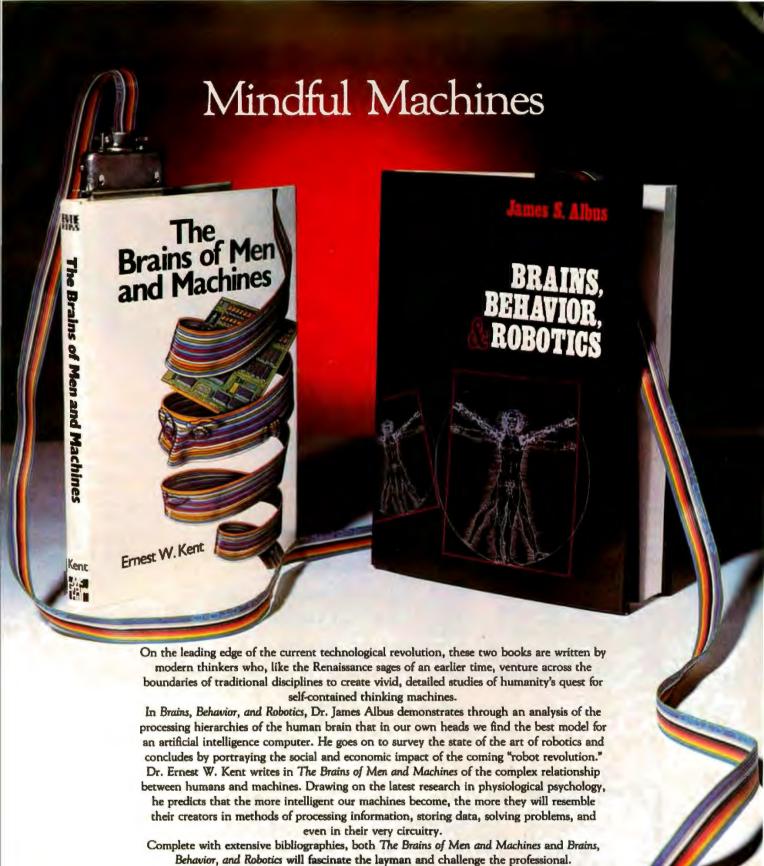

The LEX-II can be operated with a home or office terminal to communicate with a computer or to communicate between computers. And it works in geographic areas where other modems fall short.

It has a receive sensitivity of -47 dBM (compared to our competitor's -45 dBM). It has a transmit filter which greatly enhances its performance. It weighs only 24 ounces. And its battery power option enables you to use it anywhere.

If you're looking for a versatile, high-performance acoustical modem, look into the LEX-11.

# The 149% personal computer.

तमें हिंगे दिने रिक्टे दिन

#### Introducing the Sinclair ZX81

If you're ever going to buy a personal computer, now is the time to do it.

The new Sinclair ZX81 is the most powerful, yet easy-to-use computer ever offered for anywhere near-the price: only \$149.95\* completely assembled.

Don't let the price fool you. The ZX81 has just about everything you could ask for in a personal computer.

#### A breakthrough in personal computers

The ZX81 is a major advance over the original Sinclair ZX80—the world's largest selling personal computer and the first for under \$200.

In fact, the ZX81's new 8K Extended BASIC offers features found only on computers costing two or three times as much. Just look at what you get:

- Continuous display, including moving graphics
- Multi-dimensional string and numerical
- \*Plus shipping and handling. Price includes connectors for TV and cassette, AC adaptor, and FREE manual

- Mathematical and scientific functions accurate to 8 decimal places
- Unique one-touch entry of key words like PRINT, RUN and LIST
- Automatic syntax error detection and easy editing
- Randomize function useful for both games and serious applications
- Built-in interface for ZX Printer
- 1K of memory expandable to 16K

The ZX81 is also very convenient to use. It hooks up to any television set to produce a clear 32-column by 24-line display. And you can use a regular cassette recorder to store and recall programs by name.

#### If you already own a ZX80

The 8K Extended BAStC chip used in the ZX81 is available as a plug-in replacement for your ZX80 for only \$39.95, plus shipping and handling—complete with new keyboard overlay and the ZX81 manual.

So in just a few minutes, with no special skills or tools required, you can upgrade your ZX80 to have all the powerful features of the ZX81. (You'll have everything except continuous display, but you can still use the PAUSE and SCROLL commands to get moving graphics.)

With the 8K BASIC chip, your ZX80 will also be equipped to use the ZX Printer and Sinclair software.

#### Order at no risk\*\*

We'll give you 10 days to try out the ZX81. If you're not completely satisfied, just return it to Sinclair Research and we'll give you a full refund.

And if you have a problem with your ZX81, send it to Sinclair Research within 90 days and we'll repair or replace it at no charge.

\*\*Does not apply to ZX81 kits

NEW SOFTWARE: Sinctair has published pre-recorded programs on cassettes for your ZX81, or ZX80 with 8K BASIC. We're constantly coming out with new programs, so we'll send you our latest softwere catalog with your computer.

ZX PRINTER: The Sinclair ZX Printer will work with your ZX81, or ZX80 with 8K BASIC. It will be available in the near future and will cost less than \$100.

16K MEMORY MODULE: Like any powerful, full fledged computer, the ZX81 is expandable. Sinclair's 16K memory module plugs right onto the back of your ZX81 (or ZX80, with or without 8K BASIC). Cost is \$99.95, plus shipping and handling.

ZX81 MANUAL: The ZX81 comes with a comprehensive 164-page programming guide and operating manual designed for both beginners and experienced computer users. A \$10.95 value, it's yours free with the ZX81.

# The 9995 personal computer.

#### Introducing the ZX81 kit

If you really want to save money, and you enjoy building electronic kits, you can order the ZX81 in kit form for the incredible price of just \$99.95." It's the same, full-featured computer, only you put it together yourself. We'll send complete, easy-to-follow instructions on how you can assemble your ZX81 in just a few hours. All you have to supply is the soldering iron.

#### How to order

Sinclair Research is the world's largest manufacturer of personal computers.

The ZX81 represents the latest technology in microelectronics, and it picks up right where the ZX80 left off. Thousands are selling every week.

We urge you to place your order for the new ZX81 today. The sconer you order, the sconer you can start enjoying your own computer.

To order, simply call our toll free number, and use your MasterCard or VISA.

To order by mail, please use the doupon. And send your check or money order. We regret that we cannot accept purchase orders or C.O.D.'s.

CALL 800-543-3000. Ask for operator #509. In Ohio call 800-582-1364. In Canada call 513-729-4300. Ask for operator #509. Phones open 24 hours a day, 7 days a week. Have your Master-Card or VISA ready.

These numbers are for orders only. For information, you must write to Sinclair Research Ltd., 2 Sinclair Plaza, Nashua, NH 03061.

# AUDCTL Bit Function Performed If Bit Set Switches the main clock base from 64 kHz to 15 kHz Inserts high-pass filter into channel 2, clocked by channel 4 (only frequencies higher than that of channel 4 are passed by the litter) Inserts high-pass filter into channel 1, clocked by channel 3 (only frequencies higher than that of channel 3 are passed by the litter) Joins channel 4 to channel 3 to give 16-bit resolution Joins channel 2 to channel 1 to give 16-bit resolution Clocks channel 3 with 1.79 MHz Clocks channel 1 with 1.79 MHz Makes the 17-bit poly counter into a 9-bit poly counter

**Table 4:** Modifications to the sound-generation registers available by manipulation of the bits in register AUDCTL (location D208 hexadecimal, 53768 decimal). Bit 7 is the most significant bit in the register.

new concept must be explained: clocking. In general, a clock is a train of pulses used to synchronize the millions of internal operations occurring every second in any computer. The central clock pulses continuously, each pulse telling the circuitry to perform another step in its operations. You may remember that a divide-by-N frequency divider outputs one pulse for every Nth input

pulse. You also may have wondered where the input pulses come from. One main input clock runs at 1.79 MHz; it can provide the input pulses. Also, several secondary clocks can be used as input clocks. The AUDCTL register allows you to select the clock used as the input to the divide-by-N circuit. If you select a different input clock, the output from the frequency divider will change drastically.

# ATTENTION GOVERNMENT D P USERS AND PURCHASERS

We represent many fine micro products and manufacturers on the U.S. Government's GSA Schedule, including

#### Apple, Cromemco, Micropolis, NorthStar, Osborne and Seegua Computers

Purchasing from the Schedule will save you the time consumed by the bid process. Products shipped throughout the United States and world-wide. Visit or write any of our stores for more information or to receive our catalogue of products represented.

Career Opportunities Available \* An Equal Opportunity Employer

For example, imagine that you are using the 15-kHz clock, with the frequency register set to divide by 8. The rate of output pulses from the divideby-N circuit would be about 2 kHz. But if you changed the selection of clocks to get the 64-kHz clock and did not change the frequency register, what would happen? The divide-by-N would still be putting out one pulse for every eighth input pulse, but the input rate would be 64 kHz. The result is an output frequency (from the divide-by-N) of 8 kHz. Thus, you can see that reclocking changes the frequency independent of the frequency register and on a larger scale.

The formula for the output frequency (from the divide-by-N) is quite simple:

Output frequency = 
$$\frac{\text{Clock}}{N}$$

Setting bit 0 of the AUDCTL register switches from the 64-kHz clock to the 15-kHz clock. Note that if this bit is set, every sound channel clocked with the 64-kHz clock will instead use the 15-kHz clock. Similarly, by setting bits 5 or 6, you can clock channels 3 or 1, respectively, with 1.79 MHz. This will produce a much higher note, as demonstrated by the following example:

SOUND 0,255,10,8 POKE 53768,64

The SOUND statement causes channel 1 to give a low tone, and the POKE sets AUDCTL bit 6 to 1, causing the pitch generated by channel 1 to jump to a much higher note.

#### 16-Bit Frequency Options

The 8 bits of resolution in the frequency-control registers normally provide more than adequate resolution for the task of selecting any desired frequency. There are, however, situations in which 8 bits are inadequate. Consider what happens when you execute the following statements:

FOR I=255 TO 0 STEP -1: SOUND 0,1,10,8:NEXT I

Initially, the sound rises smoothly,

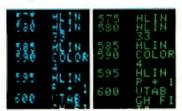

# SANYO MONITORS

# When you're ready to stop playing around.

Maybe your home TV was OK as a display when all you were concerned with was blasting Klingons.

But if you spend more than a couple of hours in front of your TV screen, you'll start to pay the price in eyestrain. Maybe even headaches.

It's not worth it. Not when you can get a Sanyo data monitor that's specifically designed for long-term, day-in, day-out use.

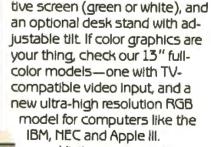

Compare display quality of a typical home TV (left) with a 5anyo professional monitor (right).

Sanyo monitors have been the industry standard for as long as there's been a personal computer industry—in fact they're recommended by computer dealers and manufacturers alike. That's because when you buy a Sanyo, you're not just getting a stripped-down TV set. You're getting a truly professional display system.

Sanyo offers a complete selection of monitors for any application. You can choose from

9" models with either white or easy-on-the-eyes green phosphors. Or a sleek new 12" model with a special anti-reflec-

Visit your computer dealer and find out how much better things look on a real, professional monitor from Sanyo.

Anything less is Just playing around.

- 50 GOTO 40: REM

Initialize sound

Clock channel 1 with 1.79 MHz, clock

channel 2 with channel 1

Turn off channel 1, turn on channel 2

(pure tones)

Set paddles to put frequencies in frequency registers

but as it approaches the end of its range the frequency takes larger and larger steps that are noticeably clumsy. This happens because you are dividing the clock by smaller and smaller numbers: 15 kHz divided by 255 is almost the same as 15 kHz divided by 254; however, 15 kHz divided by 2 differs greatly from 15 kHz divided by 1. The only way to solve this problem is to use a larger number that allows you to specify frequency with greater precision. The means to do this are built into POKEY.

AUDCTL bits 3 and 4 allow two channels to be joined, creating a single channel with an extended dynamic-frequency range, Normally, each channel's frequency-divider number can range from 0 to 255 (which results from 8 bits of divideby-N capability), Joining two channels allows a frequency range of 0 to 65535 (16 bits of divide-by-N capability). In this mode, it is possible to reduce the output frequency to less than 1 Hz. The program in listing 1 uses two channels in the 16-bit mode and two paddles as the frequency inputs. Insert a set of paddles into port 1, then type in and run listing 1. The right paddle tunes the sound coarsely; the left paddle finely tunes the sound between the coarse increments.

This program first sets bits 4 and 6 of AUDCTL: this tells the Atari computer to clock channel 1 with 1,79 MHz and join channel 2 to channel 1. Once this happens, the 8-bit frequency registers of both channels are assumed to represent a single 16-bit number N that is used to divide the input clock. Next, the volume of

channel 1 is set to 0. Since channel 1 no longer has its own direct output, its volume setting is meaningless to us and we zero it. The channel 1 frequency register is used as the finetuning or low byte in the sound generation; the channel 2 frequency register is the coarse-tuning or high byte. For example, poking a 1 into the channel 1 frequency register makes the pair of registers divide by 1. Poking a 1 into the channel 2 frequency register makes the pair divide by 256, Poking a 1 into both frequency registers makes the pair divide by 257.

Bit 3 of AUDCTL can be used to join channel 4 to channel 3 in the same way.

The following instructions demonstrate some interesting aspects of 16-bit sound (try poking other numbers into the last four locations):

> SOUND 0.0.0.0 POKE 53768,24 POKE 53761,168 POKE 53763,168 POKE 53765,168 POKE 53767,168 POKE 53760,240 POKE 53764,252 POKE 53762,28 POKE 53766,49

#### High-Pass Filters

AUDCTL bits 1 and 2 control highpass filters in channels 2 and 1, respectively. A high-pass filter allows only higher frequencies to pass through. In the case of these highpass filters, high frequencies are defined as anything higher than the output of another channel selected by

For more information on the VIC-20's exciting
Space Games, Personal Software, and Programming capabilities,
visit your Commodore Dealer, or write:

VIC-20, Commodore Business Machines, 681 Moore Road, King of Prussia, PA 19406

the AUDCTL bit combination. For example, if channel 3 is playing a cow's moo and AUDCTL bit 2 is set, only sounds with frequencies higher than the moo will be heard on channel 1 (anything lower than the "moooo" will be filtered out). See figure 6.

The filter is programmable in real time because the filtering channel can be changed on the fly. This opens a large field of possibilities to the programmer. The filters are generally used to create special effects. Try the following statements:

SOUND 0,0,0,0 POKE 53768,4 POKE 53761,168:POKE 53765,168 POKE 53760,254:POKE 53764,127

#### 9-Bit Polynomial Conversion

Bit 7 of AUDCTL, when set, turns the 17-bit poly counter into a 9-bit

poly counter. The shorter the poly counter, the more often its distortion pattern repeats, or the more discernible is the pattern in the distortion. Therefore, changing the 17-bit poly counter into a 9-bit poly counter makes the noise pattern more repetitious and more discernible. Try the following demonstration of the 9-bit poly-counter option, listening carefully when the POKE is executed:

SOUND 0,80,8,8 POKE 53768,128

The first statement activates the 17-bit poly counter; the second changes the counter to a 9-bit poly counter.

#### Next Month

Now that we know about the various registers that control the sound-generating capabilities of the Atari 400/800, we will look at several BASIC and machine-language techniques to use sound within a program.

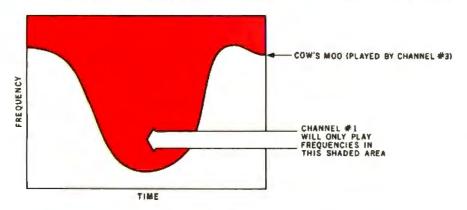

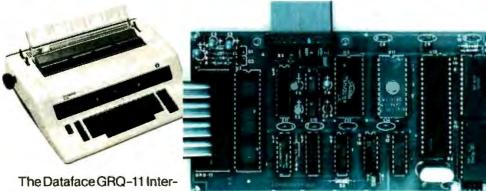

Figure 6: High-pass filtering in the Atari 400/800. At any given instant, the only frequencies in channel 1 that are passed by the filter are those greater than the frequency being played in channel 3.

### DATAFACE GRQ SERIES INTERFACE

#### TURNS YOUR ELECTRONIC TYPEWRITER INTO A PRINTER/TYPEWRITER

The Dataface GRQ-11 Interface expands your Olympia ES Series electronic typewriter

into a letter press quality printer for your personal or business computer. And, you still have a fully featured electronic typewriter—two machines in one.

The GRQ Series Interface features:

- 1. Standard EIA RS-232-C Serial Interface and Parallel (Centronics compatible).
- 2. Standard asynchronous ASC11 code, 7 bit data; 1 start bit; accommodates 1 or 2 stop bits automatically; accommodates odd, even or absence of parity bit.
- 3. Fifty thru 9600 Baud data rate options.
- **4.** Two K buffer; supports X-on, X-off protocol as well as RTS signals.

Circuit board is installed inside typewriter back panel along side logic board. The

connection between boards accomplished by 40 pin jumper cable using existing socket. No soldering required. Power is provided to the GRQ thru two pins of the 40 lead cable. Installation in 10 minutes.

GRQ-10 — CALL FOR SPECIAL WHOLESALE PRICE. SUGGESTED RETAIL \$349.50.

# Build a Half-year Clock for the Color Computer

#### Fourth in a Series

William Barden Jr. 28122 Orsola Mission Viejo, CA 92692

The ideal clock for a computer system, to my mind, would be an inexpensive, compact, accurate unit with a self-contained power supply that could be easily interfaced to the computer system. This article describes a clock for the Radio Shack Color Computer: it meets all of my goals at the expense of some software complexity.

The half-year clock (HYC) described here can provide the time with a resolution of ± 10 seconds or better over a six-month period. Powered by a self-contained 9-volt (V) battery, it can be disconnected from the Color Computer at any time, set aside, plugged in later, and will continue reporting the time. It is a compact unit measuring 14 by 9 by 3.8 cm (51/2 by 31/2 by 11/2 inches).

The HYC uses seven integrated circuits (ICs) plus some discrete components. The project is built using wire-wrapping techniques. If you've never tried wire-wrapping, fear not: I'll provide detailed tips for easy construction.

Since the HYC communicates with the Color Computer via the serial interface of the computer, I'll start with a description of that interface.

#### Color Computer Serial Interface

The complete serial interface of the Color Computer is shown in figure 1. The four lines of the serial interface go to a 4-pin DIN plug on the rear of the system. These four lines are a subset of the 25 lines normally used in other computer systems, such as the Radio Shack Models I and III. The Color Computer uses asynchronous

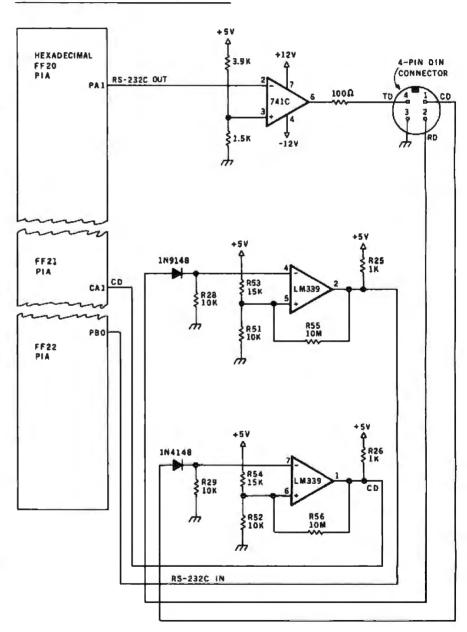

Figure 1: The Color Computer RS-232C interface consists of two comparators and one op amp used as a comparator. The TD signal is generated from software by output to PIA (peripheral interface adapter) address FF20 hexadecimal. The RD is read into PIA address FF22 hexadecimal. The CD signal is not normally used and is an "edge trigger" signal generating a PIA interrupt,

# Announcing the Printing Breakthrough of the Century: Smith-Corona TP-1 Text Printer

### ACT NOW: Limited Supply, Low, Low Cost

Smith Corona, one of the largest manufacturers of small printers in the world, gives a whole new perspective to printing with their electronic text printer—**TP-1**. The TP-1 is a microprocessor controlled, high quality **daisy wheel printer.** It produces perfectly formed, executive quality printouts at the speed of 120 words per minute. Typewriter quality printing at dot

matrix prices.
Simple, durable and dependable,
TP-1 may be used with word processing systems, microcomputers and most small business systems. Compact and attractively

Data sent in asynchronous RS-232C format typically consist of a start bit, 8 bits of data, and one or two stop bits. The bits are evenly spaced with no inherent clock.

**<b>▼ON RS-232C LINES REVERSE LOGIC (MARKING IS -12V.** 

#### **Asynchronous Communication**

The EIA standard RS-232C defines the format for data communication. Therefore, serial communication is often called "RS-232C" or "RS-232" communication. A system channel designed for data communication is known as a serial or RS-232 port.

The standard format for asynchronous communication is shown above. In this example, 8 bits make up the actual data word. The data are asynchronous, that is, they are sent at unpredictable times, rather than at regularly spaced intervals. A good example of an asynchronous datum is a character transmitted from a keyboard to a communications system such as The Source or Compuserve. The host system does not know when to expect the next character-it may occur within 1/10 second or 10 seconds. Each character must be detected and handled as an independent "event."

The computer system or device receiving an asynchronous character can read either a logic 1 or logic 0 on the receive data (RD) line. Initially, the RD line is at logical I, called "mark." The receiving system or device expects this high condition to exist initially. To signal the start of a data word, the transmitting system sends a start bit by bringing the RD line to a logical 0,

called a "space," for a duration known as a "bit time." The length of the bit time depends on the data-transmission rate and may vary from about 9 milliseconds to 0.1 millisecond.

The receiving system or device detects the start bit, delays 1/2 bit time, and gets set to receive the rest of the data word at evenly spaced intervals of one bit time. The start bit is followed by eight data bits (one of which may be a parity bit) and one or two stop bits that are always at logic 1 (mark). The stop bits ensure that the RD line will be marking prior to transmission of the next data word.

The bit rate is the data-transmission rate of all data measured in bits per second (bps). Three hundred bps is typical for the Color Computer. Each character at this bit rate typically is made up of one start bit, eight data bits, and one stop bit, for a total of 10 bits. Thus, 300 bps yields 30 characters per second. The bit time is 1/300 second, or 3.33 milliseconds.

The standard logic levels for RS-232C communication are voltages above 3 V (logic 0) and below -3 V (logic 1). In the Color Computer, the voltages used are 12 V for logic 0 and -12 V for logic 1.

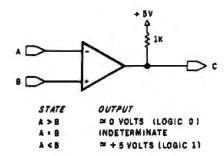

Figure 2: A comparator contrasts two input signals in relation to each other. If the "+" (plus) input is greater than the "-" (minus) input, a logical 1 is generated at the output; if the "+" input is less than the "-" input, a logical 0 is produced.

serial communication, which requires only three lines: the fourth line is available for special purposes. See the text box for background information on serial communication.

Interface operation. The Color Computer's serial interface is made up of one comparator (actually an operational amplifier) for controlling the transmit data (TD) line and two comparators for checking the receive data (RD) and carrier detect (CD) lines.

A comparator accepts two input voltages. If the "+" (plus) input voltage is higher than the "-" (minus) input, the comparator outputs a logic 1; if the "+" input voltage is lower than the "-" input, the comparator outputs a logic 0 (see figure 2).

In the following descriptions, I'll be referring to a few "memory" addresses in the Color Computer that function as I/O lines-part of the peripheral interface adapter (PIA).

TD line. The 741C operational amplifier compares the "-" input from bit 1 of port address FF20 hexadecimal with the "+" input from the voltage divider R23/R24. The "+" input is a constant +1.38 V. A logic 1 on port FF20 hexadecimal bit 1 will generate -12 V on the TD line; a logic 0 will generate +12 V on the TD line.

RD and CD lines. The two LM339 comparators have serial data as their input. Both have the same configuration. One is connected to the RS232IN line of port FF22 hexadecimal bit 0. The second is con-

# "Dad, can I use the IBM computer tonight?"

It's not an unusual phenomenon. It starts when your son asks to borrow a tie. Or when your daughter wants to

use your metal racquet. Sometimes you let them. Often you don't. But when they start asking to use your IBM Personal Computer, it's better to say yes.

Because learning about computers is a subject your kids can study and enjoy at home.

It's also a fact that the IBM Personal Computer can be as useful in your home as it is in your office. To help plan the family budget, for instance. Or to compute anything from interest paid to calories consumed. You can even tap directly into the Dow Jones data bank with

But as surely as an IBM Personal Computer can help you, it can also help your children. Because just by playing games or drawing

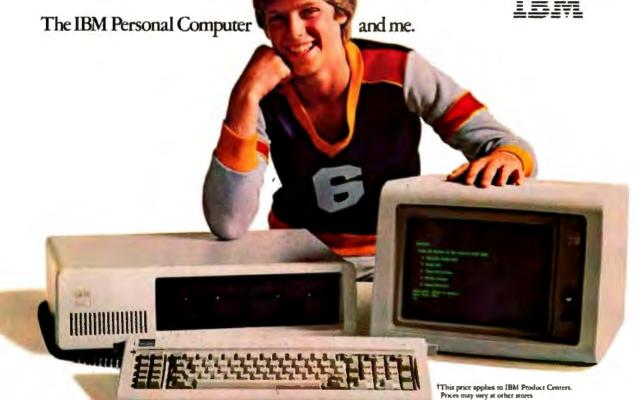

your telephone and an inexpensive adapter.

colorful graphics, your son or daughter will discover what makes a computer tick—and what it can do. They can take the same word processing program you use to create business reports to write and edit book reports (and learn how to type in the process). Your kids might even get so "computer smart," they'll start writing their own programs in BASIC or Pascal.

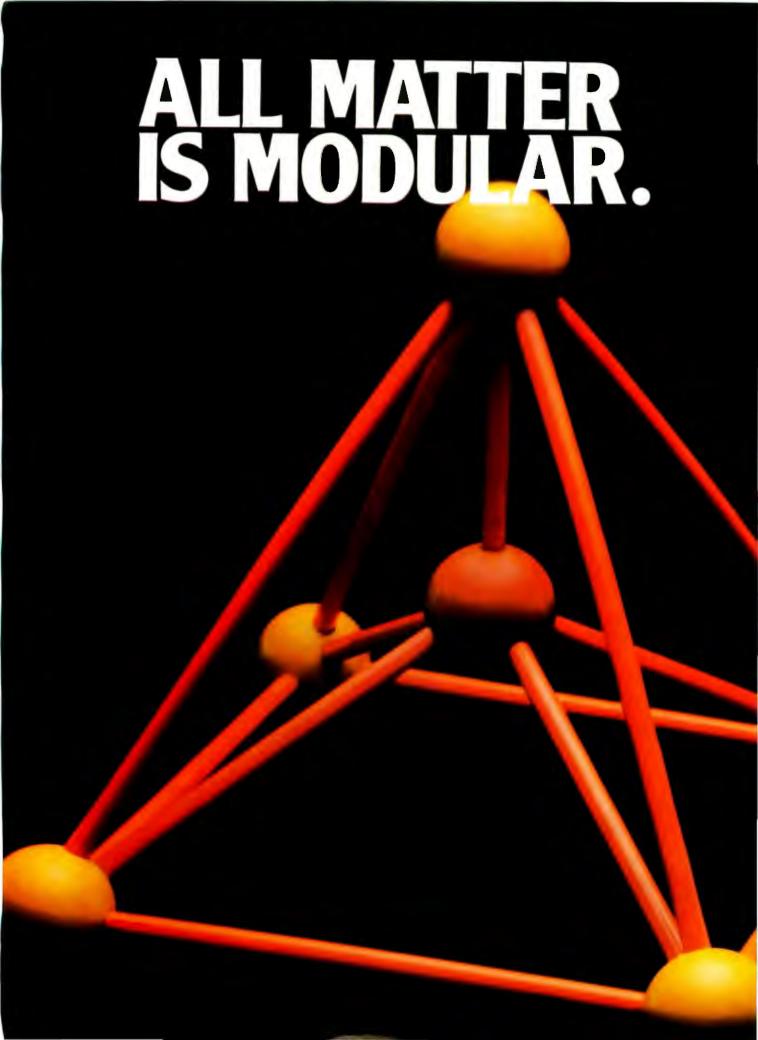

Ultimately, an IBM Personal Computer can be one of the best investments you make in your family's future. And one of the least expensive. Starting at less than \$1,600 \(^{\text{there}}\) there's a system that, with the addition of one simple device, hooks up to your home TV and uses your audio cassette recorder.

To introduce your family to the IBM Personal Computer, visit any ComputerLand® store or Sears Business Systems Center. Or see it all at one of our IBM Product Centers. (The IBM National Accounts Division will serve business customers who want to purchase in quantity.)

And remember. When your kids ask to use your IBM Personal Computer, let them. But just make sure you can get it back. After all, your son's still wearing that tie.

For the IBM Personal Computer dealer nearest you, call (800) 447-4700. In Illinois, (800) 322-4400. In Alaska or Hawaii, (800) 447-0890.

# YOUR PRINTER SHOULD BE, TOO.

Introducing the Prism Printer™ from Integral Data Systems.

The Prism Printer is the first truly modular, field-upgradable dot matrix printer. Now your printer can be as flexible as the rest of your system.

No other printer offers you as much (or as little) as you need. Start with the basic printer which features text-quality printing; then add the performance modules you need—when you need them. Getting into word processing? Add the automatic cut sheet feeder. Handling lots of data? Install the high speed Sprint Mode™. Want to get the big picture? Add the Dot Plot™ graphic option. And for communicating information and ideas faster, nothing is more effective than Prism Color™ for high quality, multicolor output.

And that's just the beginning. Additional Prism option modules will soon be available to help your evolving system meet its true potential. You'll never pay too much or get too little again.

If you're an Apple, IBM, or other professional micro-computer user, Prism Printer is the key to your total system solution. At last, the chemistry is right between you and your printer. The Prism Printer from Integral Data Systems.

For more information, and the name of your nearest Integral Data Systems Dealer, call toll free (800) 258-1386. In New Hampshire, Alaska and Hawaii, call (603) 673-9100.

A Whole New Spectrum of Imaging Ideas

Milford, NH 03055 Telex 953032

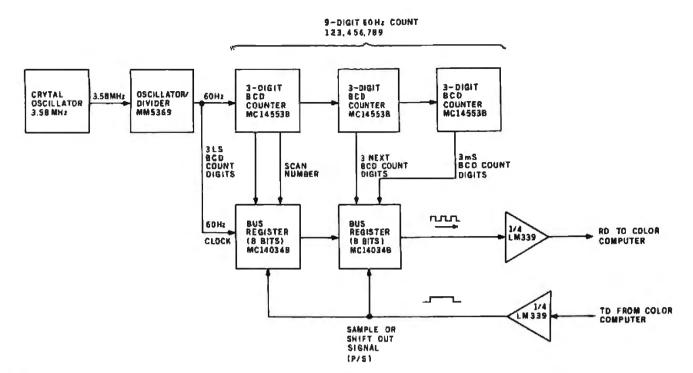

Figure 3: The half-year clock consists of a crystal oscillator, a divider producing 60-Hz pulses, a 9-digit BCD counter, a parallel/serial register, and comparator output to the Color Computer.

nected to the CD line of-port FF21 hexadecimal. The CD line generates an interrupt and is not used in this project.

The "+" input of the RS232IN comparator is biased at +2 V by the R54/R52 voltage divider. The "-" input is connected via a diode to the RD line. If the RD line is at 2.6 V (+2-V bias plus about 0.6 V for the diode), the output of the comparator is a logic 0, or about 0 V. If the RD line is less than 2.6 V, the diode will not conduct, and the output of the comparator is a logic 1, or about +5 V. In short, the RS232IN signal follows the serial data on the RD line and can be tested by reading FF22 hexadecimal bit 0.

The third line used in serial communication is ground, which is connected to pin 3 of the DIN connector.

#### **HYC** Design

A block diagram of the HYC is shown in figure 3. It interfaces to the Color Computer via the RD, TD, and ground lines of the serial port. The clock count is sent via the RD line after a prompt by the Color Computer from the TD line.

At the heart of the HYC are three BCD (binary-coded decimal) counter

chips. Each chip accumulates a three-decimal digit count of 0 to 999. Together, the three chips accumulate a count of up to 999,999,999.

The input to the three counters is a 60-hertz (Hz) signal from the oscillator/divider chip. This chip takes a 3.58-megahertz (MHz) signal from a "color burst" crystal and divides it down to 60-Hz signals.

At any given time, the count in the counter chips represents the number of 60-Hz pulses received. The maximum count of 999,999,999 represents 16,666,666 seconds—about 192 days.

The two "universal bus register" chips load 16 bits from the counters upon command from the Color Computer. The bits are then shifted out to the RD line at a rate of one every \( \frac{1}{2} \) second. It requires three transfers (48 bits total) to transmit the current time to the Color Computer. (Of course, the Color Computer has to decode it into a usable form.) The detailed logic diagram of the HYC is shown in figure 4.

Counters. The counters are Motorola MC14553B ICs. Each chip increments its count by one each time a 60-Hz pulse is received from the CLK input. To output its count, each

chip presents one digit at a time over the Q3 through Q0 outputs. Q3 through Q0 represent a BCD digit of 0000 through 1001. For example, if the count in one of the MC14553B chips was "678," the outputs on Q3 through Q0 would be, in sequence, 0110, 0111, and 1000.

The chips are outputting their counts continually. The scan rate, the rate at which the three digits appear, is controlled by an external capacitor connected to C1A and C1B. A 1.0-microfarad (µF) capacitor generates a scan rate of about 3 Hz, or a new BCD digit every 333 milliseconds (ms). The scan frequency has no relation to the 60-Hz clock frequency. This scan frequency is applied to all three counters simultaneously so that the BCD digits of all sets of Q3 through Q0 change at the same time.

The DS3 to DS1 outputs indicate which BCD digit is being displayed on the Q3 through Q0 outputs. If DS3=0, the most significant digit is being output; if DS2=0, the next digit is being output; and if DS1=0, the least significant digit is being output.

To read the current count requires three reads of Q3 through Q0: at DS1 time, DS2 time, and DS3 time. When

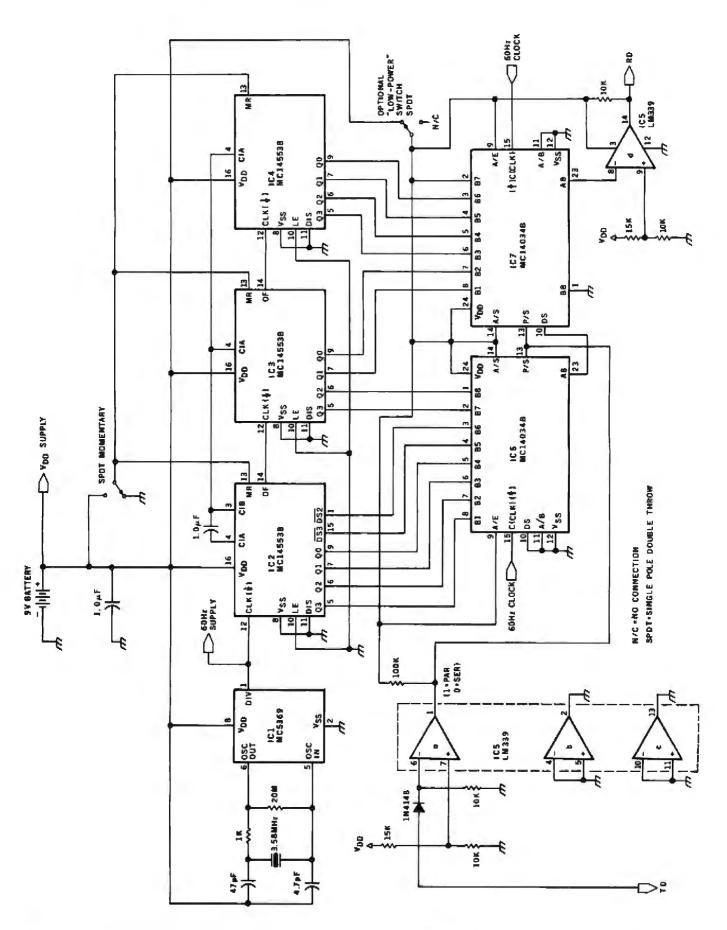

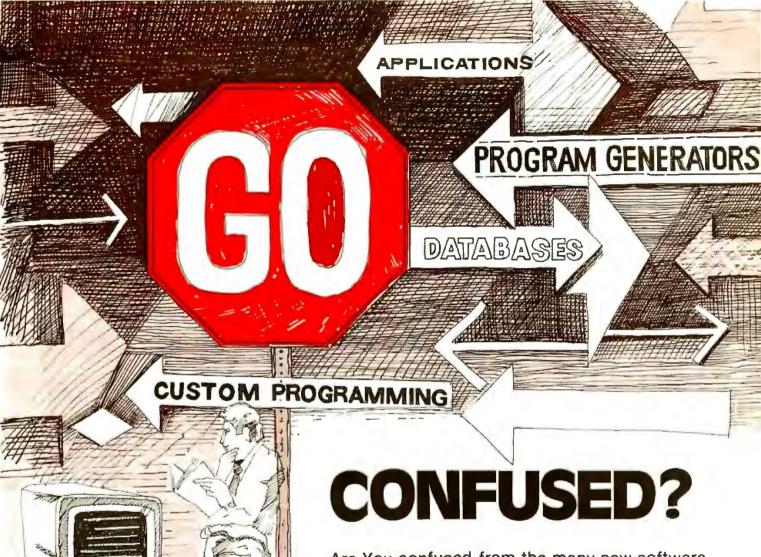

Figure 4: The half-year clock uses seven integrated circuits, most of which are CMOS devices. The counter information is multiplexed and the count data are brought into the Color Computer in three segments of 2 bytes each.

Are You confused from the many new software products becoming available?

Are you searching for the answer to your software problems?

Now your search has ended! You've discovered CONQUEST — A fully relational database system which allows for the generation of complete <u>multifile</u> turn-key applications.

This one easy-to-use tool will enable you to solve a myriad of business, professional, and personal information management problems at a fraction of the cost of custom programming. Ask for a demonstration of CONQUEST at your local computer store.

Available now for Apple II Corvus Compatible CONQUEST

\*Conquest formerly Becuret

\$325

Complete

the outputs are shuffled around in the proper order, the nine digits represent the current count.

The OF signal is the "carry" output to the next counter. This appears on the thousandth count when the counter recycles to 000. The disable (DIS) and latch enable (LE) lines are not used in this application configuration. MR, "master reset," is used to zero the counters when a momentary switch is pulsed.

Bus registers. The bus-register chips are Motorola MC14034B ICs. They contain two 8-bit registers and can operate in a number of different modes, depending upon the configuration of the A/E, P/S, A/B, and A/S inputs. The two modes being used here are "synchronous parallel data input" and "synchronous serial data input."

In the first mode, parallel data are strobed in by the clock input. In our circuit, 14 bits of data from the counter chips are strobed in. Twelve of these bits are the current BCD digits from each counter chip. Two of the bits are the DS3 and DS2 scan signals. (The third scan signal, DS1, is not needed, since we can infer that it is active when DS3 and DS2 are inac-

Setting the P/S signal to logic 1 selects the parallel data input mode. The 14 lines are continuously strobed in on the rising edge of every C (CLK) input. Since the clock runs at 60 Hz, the 14 lines are recorded 60 times per second.

When signal P/S is a logic 0, the bus registers are in the serial data input mode. This is something of a misnomer because this mode not only shifts in new data, but also shifts out previously recorded data: in this case. the 14 bits recorded earlier. The 14 "old" bits are shifted out at a 60-Hz rate. To allow synchronization of the serial bit stream, a leading 0 and 1 are prefixed to every 14-bit group.

RS-232 interface. The Color Computer's RD line is driven by the least significant bit of the HYC's lowerorder bus register. The output is about 0 V if the data bit is a 1, or about +5 V if the data bit is a 0. The "bit time" of this output is 1/40 second, or about 16.66 ms. This RD output goes into the RS232IN bit of port FF22 hexadecimal.

The Color Computer's TD line drives the HYC's mode-select signal P/S. The level at the P/S pin changes from 0 V to close to +9 V for a positive or negative input, respectively. The P/S signal is logically equivalent to the status of the RS232OUT bit in port FF20 hexadecimal.

CMOS circuitry. All chips except the LM339s are CMOS (complementary metal-oxide semiconductor). CMOS is characterized by low power consumption. The HYC requires less than 4 milliamperes (mA) of current. The optional power switch shown in figure 4 lets you extend battery life when the HYC is not connected to the system or when the Color Computer is not in use. It shuts off power to all

# CHANGING THE LAMPS IN THEIR OFFICES SAVED \$2,000 AYEAR.

While lighting energy costs kept going up, Carroll County Bank's costs started going down when they changed to General Electric Watt-Miser® II fluorescent lamps in the office and customer areas of their six banks. In fact, they not only realized a slight increase in light levels, they also enjoyed a 27-month payback period.

Isn't it about time you realized how much you can save by changing to GE energy-saving lamps? Call your GE lamp distributor or sales representative to find out. Or call 800-321-7170. (In Ohio: 800-362-2750.)

WE BRING **GOOD THINGS** TO LIFE.

Replace standard fluorescent lamps in existing fixtures with Watt-Miser II lamps, and save enough energy costs to pay for them in no time at all.

\*Savings for lamps and ballast at 6¢/KWH.

Table 1: Parts list for the half-year clock. All parts, except those starred, are available from Radio Shack.

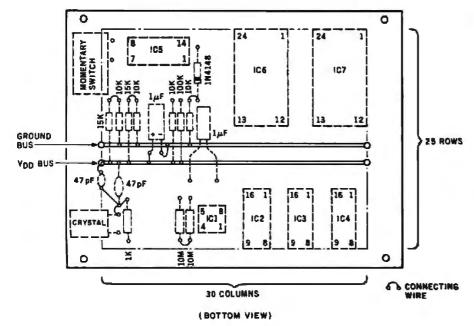

Figure 5: A 7- by 9.5-cm (24- by 34-inch) grid board holds seven wire-wrap sockets, eighteen discrete components, and two bus lines to facilitate wiring.

components not involved in maintaining the half-year count.

A typical alkaline battery has a capacity of about 0.5 ampere-hours, making the HYC functional for about 250 hours of continuous use in the low-power mode, or about 125 hours of continuous use without the optional power switch. This 5/10-day life can be extended by paralleling a number of 9-V batteries or by using a larger battery, such as the NEDA 1603 size, which will not fit in the case used here, but which will last a good deal longer-over 1000 hours in the low-power mode.

CMOS operates on a power supply of from 3 to 18 V. The voltage of the supply can be degraded quite far before the HYC will stop operating. The limiting factor is the RD output. which must swing from 0 to at least +2.6 V for proper comparator operation in the Color Computer.

# Construction of the HYC

All the parts in the HYC are easy to obtain. The 3.58-MHz crystal, oscillator/divider, counter chips, and LM339 are stocked by Radio Shack. The bus-register chips are available from any well-stocked parts supplier (see the ads in any issue of BYTE). The cost of all parts should be under \$20. See the parts list in table 1.

The HYC is housed in a project case (Radio Shack 270-219 or equivalent). This plastic case has a built-in compartment large enough to hold a 9-V battery.

A 7- by 9.5-cm (21/4- by 31/4-inch) grid board is used to hold the components. Two #14 bus wires run down the center of the board. One is used for the  $V_{DD}$  bus (+9 V); the other is ground (see figure 5).

The board has printed-circuit pads on one side. Mount the IC sockets. resistors, capacitors, and crystal on the side of the board without the foil. Solder two diagonally opposing pins of the IC sockets. Leave the resistor, capacitor, and crystal leads uncut for wire-wrapping.

Wire-wrap the IC pins according to table 2. All detailed connections are shown, but obvious power-supply connections are not indicated, I

# CASH FLOW PROBLEMS?

# IT'S NICE TO KNOW SOMEONE WHO HAS THE SOLUTION.

MicroAge is your Solution Store . . . that means at MicroAge Computer Stores we have a wide selection of time-saving computerized business systems designed specifically to solve the daily cash flow problems every businessman faces.

MicroAge has computerized business systems that

quickly and affordably allow you to regain control of your critical accounts receivable... at last making it possible for you to carry out effective collection procedures on a consistent basis. MicroAge has accounts receivable program packages to automatically display and update account information; prepare trial balance including a balance-due and delinquency aging

report, and take care of dozens of other tasks that eat into your time and profit!

Computerized business systems from the Micro-Age Computer Store are available in the \$5,000 to \$15,000 range, to suit the individual budget of your small business or professional practice. MicroAge backs up every system with personalized service, warranty service and repair, installation, systems consulting, even customer training. Visit the MicroAge Computer Store in your area soon with your business problems, and let us help you with the solution.

It is inexpensive and will cut the wire-wrap time in half.

The V<sub>DD</sub> and ground leads can be connected directly to the two buses. No power switch is used. The three leads to the serial port can be made from three-conductor ribbon cable routed into the battery compartment of the case and between the compartment cover (see figure 6). The opposite end of the ribbon cable con-

nects to the 4-pin male DIN plug (see figure 7).

# Testing the Hardware

After you've assembled the board, test the interconnections, referring to table 2 and figure 4. Invariably, there will be one or two miswires. (I once wired 10 chips in mirror-image fashion—pin 1 to 24, 2 to 23, etc.; you should be in better shape than this!)

Use two common straight pins, clip

leads, and an ohmmeter or continuity tester to check all connections before installing the ICs in their sockets. When you're confident that all the connections are proper, plug in the ICs. CMOS is not as intolerant of static electricity as it once was, but avoid handling the chips more than necessary.

Plug in the 9-V battery, and you should be in operation. If you have an oscilloscope, check between pin 3 of IC4 and ground. The scan clock

should be operating at about 3 Hz. If it's slower than 3 Hz, try lower values than the 1-µF capacitor connected between pins 3 and 4 of IC2. Also, check the oscillator/divider output. You should see a clean 60-Hz square wave.

# **HYC Software**

The HYC, in keeping with the traditions of the Color Computer system, is largely software dependent. Listing 1 shows a 6809 assembly-language program that reads data from the HYC. It resides in the upper 256 bytes of RAM (in a 16K Color Computer system). Protect this area by a CLEAR 200, & H3EFF when running the program with BASIC. Key in the 97 bytes of the program or use POKEs and DATA statements in your BASIC program.

With the exception of 2 bytes, the program is relocatable. Change the second and third bytes of the second instruction (locations 3F05 to 3F06 hexadecimal in listing 1) if you

# How the HYC Program Works

The Clock I/O Handler (listing 1) is divided into three parts: the DELAY subroutine, the INPUT subroutine. and the main loop CLOCK.

The DELAY subroutine delays in multiples of 0.8333 second. One 60-Hz pulse has a duration of 16.666 milliseconds. This subroutine can be conveniently used for delaying in multiples or submultiples of one 60-Hz bit time.

The INPUT subroutine makes a single read of 16 bits of data from the counters. The BSR instruction at IN-PUT calls INPUA, resulting in the code from INPUA through the RTS instruction being executed twice. Eight bits of data are read on each pass through the section of code.

The loop at INP010 reads in eight data bits from port FF22 hexadecimal. Bit 0 is shifted right into the carry condition code and then rotated into the byte pointed to by the user stack pointer. The byte is initially cleared to 0. At the end of the second pass through INPUA, 2 bytes of data have been stored in the user stack, representing one complete read of three

The main loop at CLOCK performs consecutive calls of the INPUT subroutine until three samplings of DS1, DS2, and DS3 have been compiled in the 6 bytes of the buffer. First, a 1 is output to bit 1 of port FF20 hexadecimal, bringing the HYC's P/S signal to a I (parallel data input mode). A delay of 1.9 cycles is provided so that the data can be clocked into the bus registers.

After the delay, the serial output is started by outputting a 0 to bit 1 of port FF20 hexadecimal, bringing P/S to a 0 (serial data input mode). Immediately after the output, the serial datum is checked by reading port FF22 hexadecimal bit 0. If the datum is a 1. the first clock occurred too close to the initialization of the process, and the process is repeated from CLK010. If the datum is a 0, a delay of 1/10 cycle is done and a test for 0 is done again; if the datum is not 0, the clock occurred within 1/10 cycle (close to the edge of a bit time), so the process is repeated.

If the first bit is a 0, the loop at CLK020 delays until the appearance of a 1. At this point, the second clock has just occurred. A delay of 11/2 cycles is then done to position the next read in the middle of the third data bit time. The INPUT subroutine is then called to read in the next 16 bits. The last two of these are always zeros.

Now, the scan number of the first 16 bits is tested. If not equal to binary 11, or DSI, the process is repeated from CLK010. If equal to DS1, the user stack pointer is adjusted, the scan number is adjusted to 2, and another read from CLK010 is done to read the DS2 cycle. A third iteration reads the last cycle, D53.

The short subroutine at GETSER gets the serial bit and tests it, changing the Z condition code to zero or nonzero.

relocate the program. These 2 bytes should hold the address of a 6-byte buffer.

A simple BASIC test program is shown in listing 2. This program defines the location of the program by the DEFUSRO statement. (Change this statement if you have relocated the machine-language code.) The assembly-language program is entered by the USRO call and returns with 6 bytes of the current clock count in locations 3FF0 through 3FF5 hexadecimal. These six locations represent the BCD digits and scan numbers as shown in figure 8. Sample outputs are shown in figure 9.

Text continued on page 122

In 14 accelerated steps. WordStar™ Made Easy lets you build word processing skills which are applicable to any business office. Legal documents, sales reports, business letters, manuscripts - all can be generated quickly and easily without reference to complicated manuals. Applies to any version of WordStar,™ including version 3.0. An appendix listing CP/M® commands and a detachable

WordStar™ Command Sheet are featured for handy reference. Spiral bound paper,

With the price of the UNIX\* system license cut by 90%, a whole new era in multi-user systems operation comes to programming.

Now, as the feasibility of incorporating UNIX\* into your data management or buying UNIX\* based productsincreases, THE book on the subject has been published by Osborne/McGraw-Hill.

Included are hands-on tutorials on the basic UNIX\* system commands, chapters on related resources, definitions of basic system concepts... everything needed for immediate practical fluency, or evaluation of the system by potential users. \$15.99, paperback, 496 pages.

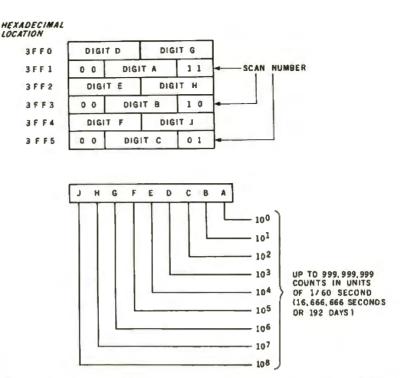

Figure 8: The 6 bytes of count data from the half-year clock contain nine BCD digits and three scan numbers. The order is based on the functional layout of the hardware and the data must be rearranged by the interface software.

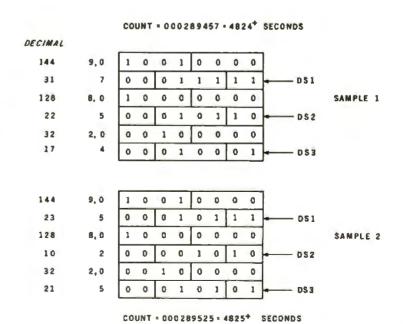

Figure 9: These are typical data samples. Sample 1 represents a count of 000289457, or 4824.XX seconds. Sample 2 occurred after sample 1 and represents the next count of 000289525, or 4825.XX seconds.

Most small system users think all microcomputers are created equal. And they're right. If you want performance, convenience, styling, high technology and reliability (and who doesn't?) your micro usually has a price tag that looks more like a mini. It seems big performance always means big bucks. But not so with the SuperBrain!

Standard SuperBrain features include: twin double-density 51/4" drives which boast nearly 350,000 bytes of disk storage — expandable to 10 megabytes. A full 64K of dynamic RAM. A CP/M\* Disk Operating System to insure compatibility to literally hundreds of application packages presently available. And, a 12" non-glare. 24 line by 80 column screen.

You'll also get a full ASCII keyboard with an 18 key numeric pad and individual cursor control keys. Twin RS232C serial ports for fast and easy connection to a modem or printer. Dual Z80 processors which operate at 4 MHZ to insure lightning-fast program execution. And the list goes on! Feature after feature after feature.

Better yet, the SuperBrain boasts modular design to make servicing a snap. A common screwdriver is about the only service tool you'll ever need. And with the money you'll save on purchasing and maintaining the SuperBrain, you could almost buy another one. For under \$3,500, it is truly one of the most remarkable microcomputers available anywhere.

Whether your application is small business, scientific, educational or just word processing, the SuperBrain is certainly an exciting solution to the small computer problem. And since you can easily expand it, you'll probably never outgrow it.

Call or write us today for a complimentary copy of our "SuperBrain Buyer's Guide." We'll show you how you can get big system performance without having to spend big bucks.

# LET US INTRODUCE YOU TO THE COMPUSTAR® NETWORK.

# AGAIN

# AND AGAIN

# AND AGAIN

Each CompuStar unit offers the CP/M operating system, 64K of RAM and the ability to start as a floppy-based system and grow to 400 megabytes of hard disk storage. Up to 255 units can be linked together in one shared-disk system.

Just the system for the dealer or OEM who wants to make it big in the business market. The versatility and expandability of the CompuStar network lets you answer your clients' needs today and tomorrow. And our low price lets you offer a package they can afford to buy and you can afford to seli.

If networking is new to you, TriStar will give you a proper introduction. We've got software for CompuStar, including accounts payable, payroll, accounts receivable, word processing and database management. Plus we'll help you with your own software development, systems configuration, communications, hardware service, training, installation and any other needs that might pop up.

Because we're experts in networking and support, intertec® (the manufacturer of CompuStar) has chosen us to distribute this incredible, expandable business system.

For more information on CompuStar and other Intertec products, call (609) 424-4700.

Text continued from page 117:

A general-purpose BASIC driver is shown in listing 3. This program displays the actual number of days, hours, minutes, and seconds represented by the count in the HYC. This count can be held in a Color Computer BASIC variable, which allows nine decimal digits of precision.

A "bias" count can be input to the program before sampling the HYC. This bias may be positive or negative to adjust the current count to a previous starting point or to "trim" the time. The unit of bias is \$\frac{1}{2} \text{starting}\$ second. Thus, use a value of 60 for every second, 3600 for every minute, 216,000 for every hour, or 518,400 for every day. The momentary-contact RESET switch resets the entire count to 0.

The tests of the current count (T1) with the previous count (T0) require some explanation. In most cases, the sampling process reads count data in a "nonchanging" state, However, because the scan clock occurs at unpredictable times, the count may be sampled in the middle of a scan clock "edge," yielding invalid data. Because of this, T1 (current) is compared to TO (old), If T1 is less than T0, T1 is invalid and another sample is made. If T1 is greater than T0 by 999 counts (16.65 seconds), T1 is considered invalid and another sample is made. The typical display generated by the program shows the time changing every 2 seconds, with occasional lapses of up to 4 seconds.

Tests run over several days showed less than one (detected) invalid read per minute with a maximum delay of 5.5 seconds. No invalid times appeared.

If the HYC is to be called at random times, make three calls and test for ascending counts with a difference of less than 10 seconds or so. Using this method, the resulting time will be accurate to within 10 seconds of the counter time.

The crystal used should provide an excellent time base. It can be fine-tuned, however, by substituting a 5 to 50-picofarad (pF) "trimmer" capacitor in place of the 4.7-pF capacitor connected to the crystal.

In operation, the HYC can be disconnected from the system at any time (without turning off the Color Computer) and left running. It can be reconnected at any later time. (Stop the BASIC program above if this is done to prevent a hang-up caused by T1-T0 being greater than 999.)

If Rip van Winkle had owned a Color Computer, he would have loved the half-year clock. If you have nothing to do for the next 192 days, why not check this project out with your Color Computer to test its accuracy? Or count clock pulses instead of sheep: 999,998,767; 999,998,768; 999,998,769 (yawn) . . . .

# The Input/Output Primer

# Part 2: Interrupts and Direct Memory Access

Steve Leibson Auto-Trol Technological Corporation 12500 North Washington St. POR 33815 Denver, CO 80233

Last month we left the computer waiting patiently for the printer to signal its readiness to receive another character. If you think it's wasteful to make a machine as expensive as a computer spend most of its time waiting on slower equipment, you are definitely thinking ahead. Later in this month's article. I'll explore a communication mechanism that lets the computer work on another task after transmitting a piece of information. This mechanism, known as the inter-

This article is the second in Steve Leibson's six-part series, "The Input/ Output Primer." The series will explain the way in which computers talk with the world. Upcoming articles will discuss parallel and HPIB (GPIB) interfaces; BCD and serial interfaces; character codes; and interrupts, buffers, grounds, and signal degradation. An I/O Glossary, which defines many terms used in these articles, appeared with the first installment (February 1982 BYTE, page 122). Figure and table numbers are continued from Part 1.

rupt, enables the computer to go about its business until the printer is ready for more data. First, though, you need to know how a computer selects a peripheral device to communicate with; you also need to know about interfaces—the hardware that connects computers and peripherals.

Creating subaddresses ensures that information of different kinds can be directed to the proper section of the device.

# Picking and Choosing

In the first article of this series. I briefly discussed peripheral address lines. Computers, which generally have several peripheral devices attached, select a particular device in one of two ways. One method is to have a separate I/O connection for every device connected. Selecting a particular device is merely a matter of sending information on the proper bus. This technique, however, rapidly creates a rat's nest of wires, something that's impractical to manufacture.

An I/O bus has a set of peripheraladdress lines that the processor uses to specify a device. This greatly simplifies wiring the system and results in major cost savings, although it does limit the computer to communicating with one peripheral at a time. For most computer processors, though. one is the limit anyway.

## Multiplexing Peripherals

Peripheral-address lines allow the I/O bus to be shared or multiplexed by many devices. Each device must have a unique address on the bus. Otherwise, conflicts will arise when two devices try to use information on the bus simultaneously. For instance, plotters are useful for graphing data but are terrible for listing programs.

With the Hayes direct-connect Micromodem II,™your Apple II can communicate by phone with the outside world. You can access in-

formation networks like
The Source for a variety
of business and personal
applications, exchange
programs with friends
anywhere in North

America, and even use your Apple II when you're away from your home or office.

Dependable. The Micromodem II is so dependable it comes with a two-year limited

warranty. That's another reason why it's the largest selling direct-connect modem for Apple II computers.

Programmable.
Automatic dialing and answering?
Of course! We include programs on disk that dial phone numbers for you,

send messages while you're away, and much more! Complete. You get everything you need to com-

municate with other Bell 103 compatible modems at 110 or 300 baud. The serial interface is built-in, and we even include our FCC-approved Microcoupler™ that plugs directly into any modular telephone jack in the U.S. — you don't even need the phone!

S-100, too. The Hayes Micromodem 100 gives S-100 microcomputers all the advantages of our Micromodem II!

Put the outside world inside your computer with a data communications system from Hayes. Available at computer stores na-

When the computer is accessing the disk storage device, everything will run more smoothly if the plotter ignores transactions on the I/O bus.

Clearly, each peripheral device must have its own unique address. It's more advantageous, however, for each device to have several unique addresses. Think of the peripheral device as an apartment building having a single, unique street address. Apartment One gets the local daily newspaper, which covers general information, while Apartment Two gets The Wall Street Journal, which reports on economic events. Each apartment gets information but of a different kind.

A peripheral device also requires information of different kinds. Not only do printers receive characters to print, but they also get control information such as line spacing, number of characters to print per line, type font, and other functions. Creating subaddresses within the peripheral device ensures that information of different kinds can be directed to the proper section of the device.

Peripheral address lines are split into a select code that specifies a particular peripheral and a register code that specifies the subaddress. (A register is a hardware device that holds the information until the peripheral can use it.)

## Setting up Subaddresses

To illustrate, I'll create four subaddresses within each select code. Being obstinate, as computer designers often are, I'll call these subaddresses 4, 5, 6, and 7 (nobody starts at zero any more). These four subaddresses are registers that serve as portals to the peripheral.

Four subaddresses require two wires for selection because two wires can assume four binary states. These states are:

State of line #1	State of line #2	Register addressed
0	0	4
1	0	5
0	1	6
1	1	7

(Remember, digital signals may only

To perform to its fullest capabilities, your hardware demands software designed to meet the specialized requirements of today's microprocessors. State-of-the-art software from Technical Systems Consultants keeps pace with the rapid advancements in computer technology so your hardware can live up to its full potential. Our complete line of state-of-the-art software includes:

The UniFLEX™ Operating System

UniFLEX, a true multi-user, multitasking system for the 6809 and 68000 microprocessors, supports such features as:

- hierarchical file systems
- device independent I/O
- four Gigabyte disk capacities
- full file protection
- Inter-task communication via pipes
- I/O redirection
- task swapping
- full random-access files
- comprehensive shell command language

UniFLEX, structured for large-scale microprocessor systems, will not run with minimal systems and thus has avoided design compromise. (Off-the-shelf versions and OEM licenses are available.)

The FLEX™ Operating System

FLEX, a powerful, easy-to-use operating system designed for the 6800 and 6809 microprocessors, includes:

- dynamic filespace allocation
- random files
- batch job entry
- automatic space compression
- English error messages
- user environment control
- disk resident commands
- flexible device I/O
- printer spooling

Plus, FLEX can accommodate hard disks as well as flopples. The System is available off-the-shelf for a variety of systems and in a field-adaptable version. (OEM licenses available.)

FLEX and UniFLEX are trademarks of Technical Systems Consultants, inc.

Support Software

Technical Systems Consultants offers a full line of state-of-the-art support software compatible to FLEX and UniFLEX, some of which are:

- native C and Pascal compilers for advanced programming
- extended BASIC for business and educational applications
- text editing and processing software
- sort/merge package for business applications
- variety of absolute and relocatable assemblers
- debug and diagnostic packages
- and more. Write or call today for our brochures describing our complete product line.

# Turn your TV into a time-sharing videotex display for \$399.\*

Now you can connect your family to the informative and entertaining world of CompuServe, The Source, Dow Jones News/Retrieval and other timesharing and data-base networks.

All you need is the RCA VP-3501 Videotex Data Terminal (with built-in modem and RF modulator), your telephone and your TV set. You can get instant access to regional newspapers and newsletters...weather reports and sports results...computer games and more. You can use the VP-3501 to make airline reservations...find restaurant recommendations in cities around the world. Plus stock market and corporate data. Or access your school or business computer. You can even send electronic mail and buy products.

In addition to information retrieval, the VP-3501 provides full interactive communications with a host computer. What you have working for you is a versatile, feature-packed interactive data terminal which can be worth far more to you than its low price. Its unique color-locking circuitry gives you sharp color graphics and rainbow-free characters. You get 20- and 40- character formats in one of eight foreground colors and separate color backgrounds.

With reverse video, you can emphasize certain letters, words, or sentences. A built-in tone generator...plus a white noise generator...let you create everything from the sound of explosions to the sound of music. The spill-proof, easy-to-clean keyboard is highly suitable for hostile environments. And its membrane key switches give you a natural feel.

The VP-3501 is truly a fine Videotex Data Terminal. And don't forget, it's made by RCA...the first name in television...now the foremost name in videotex terminals.

See a demonstration at your computer or electronics dealer, or contact RCA. Order now and you'll get a free password and a free hour's time-sharing on both CompuServe and Dow Jones News/Retrieval! (Limited time offer.)

For more information or to order, call toll-free. 800-233-0094. (In Pennsylvania, call 717-393-0446.) Visa or Master-Card orders accepted by phone. Or send a check including \$3.00 delivery charge plus your local sales tax to RCA MicroComputer Products, New Holland Avenue, Lancaster, PA 17604.

\*Suggested User Price

assume one of two states: on or off, "1" or "0.")

Although four registers could do the job, there's a complication: the data lines are bidirectional, and bidirectional registers are complex to construct. It's easier to use eight registers—four for input and four for output. The I/O line will specify from which group of four the register address lines will select. Remember that the I/O line specifies the direction of data flow on the data lines and so is ideal for selecting between the input and output registers.

I've now constructed a simple I/O bus that can convey information between the computer and external devices. This I/O bus isn't the most advanced, but it will satisfy present needs. I'll upgrade this "bunch of wires" later, but first let's confront a more pressing problem.

# Introduction to Interfaces

The I/O bus discussed above is a subset of the bus used in the Hewlett-Packard desktop computers, model 9825 and Systems 35 and 45. It would be convenient if all peripherals came with circuitry that directly interfaced to the I/O bus.

Unfortunately, present interfacing methods are far from ideal. The bus constructed above is paralleloriented, which means that every binary digit (bit) of a piece of information (such as a character) is available simultaneously on the 16 data lines.

Not all peripherals use 16 data lines; some peripherals don't have any parallel interfaces but instead send information one bit at a time in a time-serial fashion. No peripherals use the eight-register scheme discussed above, while several use incompatible voltage levels to represent "1" and "0." This appears to be quite a problem. In fact, there isn't a single peripheral that can talk to our I/O bus in its present state.

# Interfaces as Translators

It's necessary to interpose some specialized circuitry between the I/O bus and the peripheral device to adapt the signals from the computer to those used by the peripheral. This

specialized circuitry is called an interface. The interface, which actually plugs into the I/O bus, acts as an intermediary, translating voltages, signal formats, and whatever else is required to establish communications between the computer and the peripheral.

If every peripheral manufactured in the last decade required a different interface, it would be impossible for the computer to communicate with even a small fraction of them. Computer manufacturers simply cannot make products for that many different interfaces. Fortunately, several devices require only one of four basic types of interface: parallel I/O, serial I/O, HPIB (GPIB), and BCD (binary-coded decimal).

To connect with a peripheral, the parallel interface uses a set of wires much like those of the I/O bus. This interface is the most common among current peripherals because it's the simplest to build and usually transfers data the fastest. Major variations involve (1) the connector used between the peripheral and the interface circuitry and (2) the sense of the data and control lines. Does zero volts mean logic zero (positive true logic) or logic one (negative true logic)?

A flexible parallel interface should be available with several connectors and an unterminated cable so that a custom connector can be installed. The logic sense of the data and control lines and even the logic levels used can all be adjusted to suit the needs of a particular device.

A serial interface takes data from

the I/O bus and serializes it into a stream of bits. Incoming serial data is converted into parallel data and sent to the computer. Only two wires are required for serial communications—transmit data and receive data—however, control lines exist in serial interfaces because serial I/O dominates the special environment of long-distance data communications.

Interrupts force the processor to leave the part of the program it's executing and start executing the code in a different location in memory.

HPIB, a relatively new interface, is standardized. HPIB stands for Hewlett-Packard Interface Bus. Due to standardization, it's also known as the General Purpose Interface Bus (GPIB). Formally known as IEEE-488-1978, HPIB has well-defined signals, connector, logic sense, and logic levels. This interface allows simple connection to multiple devices over a bus structure. Since the connector and signals are standardized. you just bolt the connecting cable to the peripheral for the computer to begin communicating. You then can concentrate on the software needed to run the peripheral. A single HPIB interface can connect a computer to 14 peripheral devices.

Older instruments use a different type of interface known as binary-coded decimal (BCD). Data is transferred in 4-bit chunks, and each group of 4 bits represents a numeral (0 through 9). BCD interfaces are generally used for transmitting numeric information.

In the third and fourth installments of this primer, I'll examine these types of interfaces in depth. For now, though, let's turn to this month's main topic, interrupts and direct memory access (DMA).

# Getting the Processor's Attention

What do you think is the most important part of a telephone? The dial? The receiver? The cord? I submit that it's the bell. If the telephone had no way to summon you when a call came in, you'd have to check it periodically to see if there was someone on the line. Having to lift the receiver every few minutes would make the instrument a maddening inconvenience. Fortunately, telephones do have bells that interrupt you when someone calls.

Earlier I discussed the relative speeds of computer processors and peripheral devices. The mismatch in speeds forced the creation of handshaking lines the processor could check to determine the peripheral's availability. Without these lines, the speedy processor would inundate the poor peripheral with data. Using these handshake lines is the simplest form of I/O. The computer spends much of its time patiently waiting for the peripheral to signal readiness for

# COBOL the language of business. The language of Micro Focus

# CIS COBOL

Our CIS COBOL product family brings you the most successful business programming tool ever devised, COBOL, in a form optimized for today's most cost effective hardware, the microcomputer. Standard COBOL as defined by ANSI X3.23-1974.

The reliability and performance of CIS COBOL are strongly emphasized by its' continued qualification for U.S. government contracts. In January 1981 CIS COBOL entered its 2nd year of G.S.A. certification.

CIS COBOL is powerful but simple to use. Its screenhandling, dynamic module loading and fast ISAM let you take full benefit from micro computer facilities.

Our FORMS-2 utility is a COBOL source code generator to help you build interactive applications with ease. Using our unique demonstration "How to create a COBOL program in 20 minutes," you can quickly try out new application ideas.

And if you are developing software for resale, the variety of systems running CIS COBOL offers you a very large available market.

CIS COBOL and FORMS-2 are trademarks of Micro Focus. 8080 is a trademark of Intel Corp. 280 of Zilog. LSI-11 and PDF-11 of Digital Equipment Corp. Apple II of Apple Computer, Softcard of Microsoft Consumer Products, CP/M of Digital Research and UNIX of Bell Laboratories.

CIS COBOL and FORMS-2 are available through our dealers and distributors for many 8080, Z80 and LSI-11 systems including Apple II with Softcard and CP/M.

For OEM purchase on 8086, PDP-11, UNIX and other order codes approach us direct. Our system transfer technology has made CIS COBOL first on a number of processors and enabled us to interface to 30 different operating systems.

Figure 4: A computer system with memory bus, I/O bus, and added interrupt line. Interrupts allow the processor to start I/O processes, then go on to other tasks. The peripheral uses the interrupt line to indicate readiness for another transaction.

the next transaction.

# Interrupting

Waiting for peripherals is tolerable if the computer has nothing else to do, Often, however, there are many other things the computer could be doing, making the handshaking I/O highly inefficient. Fortunately, most computers now offer an alternative called interrupt I/O.

Let's first make clear exactly what will be interrupted. The computer is continuously executing a program in its memory. If there's no user program running, then at least the operating system will be. Thus there are at least two program levels in the computer, with the higher level being the user program, usually written in a language such as BASIC.

Because microprocessors can't run a BASIC program directly (although that day isn't far off), they use a lower-level program called an interpreter, which is written in a machine language the processor can run directly. The interpreter takes the BASIC program and interprets it by deciding which machine-language routines to call to perform the tasks requested in the BASIC program. Another type of lower-level program, a compiler, can translate a high-level language program into machine code. I'll consider only interpreters here.

Interrupts are hardware mechanisms that force the processor to leave the part of the program it's executing and start executing the code in a different location in memory. Figure 4 shows the I/O bus with an interrupt request line added. That's the only change the bus needs in order to add interrupt capability.

Interruption takes place at the machine-code level. It's helpful in synchronizing external events with the computer program but must be used carefully. Let's take an example.

Suppose a user program asks the computer to calculate the value of 2.5 + 2.5, produce the resulting value on a printer, then calculate the value of 3 + 3. The computer will first execute the BASIC interpreter's routine for floating-point addition and produce the first sum: 5.00. Then there will be six characters to print; 5. ., 0, 0, <CR>, and <LF>. <CR> and <LF> are carriage return and linefeed characters usually sent to advance the printer to the next line on the paper,

Assume the addition takes around two milliseconds. If the printer produces ten characters per second, it will take 0.6 seconds to print the first answer (actually, a little more time will be needed because carriage return and linefeed take extra time on most printers).

Handshake I/O requires the computer to wait the full 0.6 seconds before calculating the second sum because the computer is waiting to send the printer another character during that time.

Interrupt I/O's alternative is to place characters to be printed in a buffer somewhere in memory. Interrupt routines can then withdraw characters from this buffer whenever the printer can accept them, and the computer can push on through the program.

## Interrupting Machine Code

When the first character to be printed is removed from the buffer and sent to the printer, the printer interface "goes busy," transferring the character to the printer and waiting for a signal that indicates completion of the printing. Meanwhile, the computer can proceed to the next BASIC statement. When that first character has finally been printed, the printer will "go ready" for the next one. At that time, the printer interface will interrupt the processor and request another character.

Note that the machine code interpreter is interrupted, not the BASIC

program. The flow of execution of the BASIC statements is not changed but merely halted while the interruption is serviced. The interpreter, however, does branch to a different routine. This special routine, also in machine code, is called an interrupt service routine. The author of the BASIC program doesn't have to write interrupt service routines for Hewlett-Packard desktop computers, as needed routines are provided in the interpreter. This is convenient because interrupt service routines must handle many factors.

An interrupt forces a branch to the location in memory where the interrupt service routine is stored. If the processor doesn't remember where it was before the interruption, the processor will be unable to return to that location. In fact, the processor will be "lost" and unable to continue processing. Most microprocessors automatically save the address of the location being executed before the interrupt, and a return from the interrupt is sufficient to store that address.

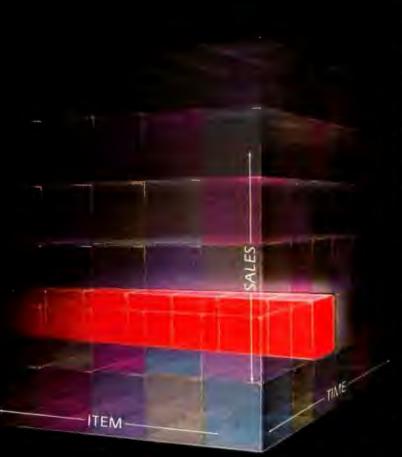

If the interrupt routine uses any of the internal registers in the processor, the routine must carefully save the contents of these registers before using them. This procedure is called context switching because the registers will be used for a different purpose in the interrupt service routine than in the main program. Upon completion of the interrupt service routine, the routine must restore the saved values of the registers.

# Interrupting BASIC

Occasionally, the buffered I/O routines for servicing interrupts are not sufficient for handling a problem. Some interrupts are more complex than those needed for data transfer. Maybe the computer is monitoring a water system and the dam bursts. Such crises require the processor's immediate attention; a simple data transfer will not suffice. A branch is needed in the high-level program to a special high-level routine written to handle the interrupt. You did write the "Dam Burst" routine, didn't you?

Interrupting a program in BASIC or another high-level language is considerably more complex than inter-

# If you think two dimensions of computer calculating power have been useful, wait until you get your hands on three.

NEC Introduces Report
Manager™ for the PC-8000
microcomputer, giving you an
astounding mastery of labels,
numbers, and formulas in a
unique 3-dimensional matrix,
the "Data Cube."™

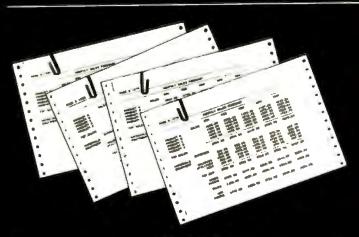

All the power and flexibility of the best electronic spread sheet ever created...now available with an axis of depth in addition to the standard horizontal and vertical.

You get an electronic book, not just an electronic page. Easy as A, B, C...and powerful as X, Y, Z!

The best way to learn about the solid wonders of Report Manager is to see it in action.

Three dimensions of calculating power, not just two: Unprecedented flexibility in any direction. Powerful editing commands to change or add to contents of a cell. Versatile report features that allow easy control over portions of data, columns on a page, pages on a row, etc. Four independent viewing regions can be created on the same screen. And there are built-in time and calendar functions, so you can manage duration as well as dimension.

See Report Manager run on the PC-8000 at your nearest NEC Home Electronics (USA) dealer.

# ANOTHER CRATE IDEA FROM ALTOS!

The complete multi-purpose, multi-terminal desktop business computer system with a built-in tutor.

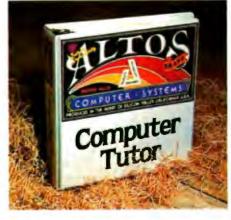

Get everything you need to computerize your business. An Altos Series 5 computer, with highly reliable 5 MByte Winchester hard disk that stores up to 1,800 pages. Three of our new smart terminals, and a speedy draft quality printer. Plus an Altos Computer Tutor, the self-teaching business software package.

All for less than \$4 a day per user.

For a quick, productive start, the Altos Computer Tutor provides simple, self-paced, step-by-step

instructions and training. Operators will become faster and much more accurate because, when you have an Altos system, it's like having three computers in one. While your bookkeeper prepares payroll, other users can check inventory, look up needed information, or produce error-free reports. Plus Altos lets vou communicate with other computers, main frames, and even allows networking. Need more? For less than \$1 a day additional, each user can also have

. WordStar™ for

word processing and Microplan™ for business analysis. And your Altos dealer has hundreds of other popular CP/M,® MP/M I1™ and OASIS applications programs for Altos computers. And most importantly, he can arrange for on-site service, nationwide.

Join thousands of businesses, professionals and institutions who rely on Altos.

Call our toll free number. We'll put you in touch with your local Altos sales and service dealer who'll crate an Altos business computer system just for you.

\*Complete 3 user system for \$4 a day per user. Price approximate and may vary in your area. Daily lease based on \$13,800 principal, 20% annual interest, five year term. Packaged system includes Altos Series 5-50 computer with 5 MByte Winchester hard disk, draft quality printer, three Altos 1 smart terminals, and the Altos Computer Tutor software package. Price does not include tax, installation, training and maintenance.

# Packed with fresh ideas for business

2360 Bering Drive San Jose, California 95131

800-538-7872 (In Calif. 800-662-6265)

WordStar is a trademerk of MicroPro International Corp. Microplan is a trademark of Cheng Laboratories, Inc. CP/M is a registered trademark and MP/M, II is a trademark of Digital Research, Inc. O SSIS is a product of Phase One Systems, Inc. O 1982 Aftes Computer Systems rupting a machine-language routine for data transfer. High-level statements can affect large portions of memory through the use of variables, arrays, and strings. If a variable is in the process of being changed when the interrupt comes in and the BASIC interrupt routine uses that same variable, the interrupt routine may use the wrong value or a garbled value. If the dam has burst and you need to close some locks downstream immediately to save a town, you and the townspeople have a strong interest in seeing that the interrupt routine uses the right value.

### End of the Line

To prevent such problems, Hewlett-Packard desktop computers allow the BASIC program to be interrupted only at the completion of program line execution. This feature is called end-of-line branching because the branch to a BASIC interrupt service routine is allowed only when the end of a line is reached. The interrupt may occur at any time and will be logged in, but it will not be serviced until the end of the current program line

Machine-code or low-level interrupts are generally called hardware interrupts because the processor hardware grants the interrupt request and performs the subsequent branching. Interrupts to the BASIC or highlevel program are called software interrupts because several instructions in the operating system are required to log in the interrupt, request an end-of-line branch, then take control of program flow at the end of the line.

# A Misunderstanding

A classic example of misunderstanding interrupt operations occurs whenever a first-time writer of interrupt service routines tries to use an interrupt for input. The typical programmer will enable the interface to interrupt and expect that when the interrupt comes, the interface will have the desired data. Unfortunately, the interface interrupts when it isn't busy. This may happen when the interface wasn't told to do anything or when an operation has completed. Since the interrupt routine didn't originally make the interface busy by requesting a data input operation before the interrupt was enabled, the interface interrupts immediately but has nothing to offer. Such a miswritten interrupt routine always produces incorrect information on the first data transfer. Remember, to use interrupts properly, you must see that data transfer is started before interrupts are enabled. That way, the first interrupt will occur when the first data transfer is complete.

# DMA: The I/O Superhighway

Thus far, I've covered the hardware within a computer and the interfacing circuitry necessary to interface peripheral devices with computers. All the discussions have assumed that the computer processor is in control of the data-transfer process, which is true for many peripheral devices. The processor is usually fast enough so that the peripheral determines the data-transfer rate.

Some devices, however, are too fast for processor-controlled I/O. These devices can handle data at rates approaching the speed of the computer memory and therefore require a different I/O technique. One technique for interfacing these fast peripherals is called direct memory access.

If the peripheral device is slightly slower than the computer processor, the processor may be able to execute only the few machine instructions needed for the I/O transfer before the peripheral is ready for another transfer. In that case, there's a good match between the I/O software and the peripheral speeds, and programmed I/O will suffice for the task.

Some peripherals, however, are too fast for the processor to execute even the few instructions needed to perform programmed I/O. As long as these peripherals are not faster than the computer's basic memory cycle, direct memory access can perform the required I/O.

In order to discuss DMA and how it works, we must return to the model of the processor/memory/I/O sys-

# SUPERVYZ-THE NEXT INDUSTRY STANDARD

SUPERVYZ is a revolutionary software concept designed to overcome the frustrations of using CP/M. This allows you to crack any non-technical market without the hassles of teaching the operating system. Instead, users are greeted with a series of self-prompting, selfexplaining menus linking the user directly to the application. We'll supply the menus or you create your own, to meet the exact needs of your customers. SUPERVYZ presents unlimited software flexibility by providing a system to coordinate multiple application programs. The menus tie it all together, allowing program interaction. Even the most complicated commands between programs can be a simple menu choice.

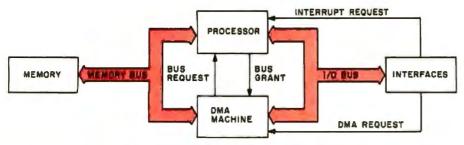

Figure 5: A computer system with an added DMA (direct memory access) machine. The DMA machine, which parallels the processor, can generate the signals necessary for controlling both the memory bus and the I/O bus.

tem. Recall that the processor is linked to the memory via a set of lines called a memory bus and to the I/O interfaces via an I/O bus. Both buses require the processor to generate address signals and control signals to synchronize the flow of data over these buses.

Generally, I/O consists of taking information from the interfaces through the I/O bus and transmitting this information to the memory using the memory bus-or vice versa. During this transfer, the processor is also using the memory and memory bus to supply machine instructions so that it knows how to effect the data transactions. If you assume that the processor takes only nine machine instructions to perform one data transaction, you can see that the effective I/O throughput is only ten percent of the rate that the memory could support. That is, of every ten memory cycles, nine instruct the processor and only one places data for I/O, Only the simplest data transactions can be performed with nine machine instructions. Formatting and code conversions require many more instructions.

The only way to speed up the I/O process is to eliminate the slowest link in the data path. For high-speed peripherals, the slowest link is clearly the processor itself! How can you eliminate the processor when it's the component that links the I/O and memory buses and is required for generation of the signals that actually make these buses work? The answer is to build a specialized circuit designed to transfer data at the full speed of memory. Since this transfer is the only function this circuitry must perform, the capability can be wired into the circuit. Instructions from memory, which would reduce

the effective memory bandwidth, are not needed.

By placing this special circuitry so that it bridges the I/O and memory buses and also by giving it the capability of generating the address and control signals required by these buses, you then have a machine that can perform I/O at the full speed of memory. Such special circuitry is called a direct memory access machine. Figure 5 shows how one might add a DMA machine to the I/O

All that remains is to decide which device will have control of the buses: the processor or the DMA machine. Normally, the processor will have control of the buses, since the DMA I/O must be infrequent enough to allow some processing to get done. The DMA machine must therefore have a way to acquire bus control from the processor whenever necessary. The processor can enable the DMA machine to request bus control. but the interface must actually request service through the DMA machine because only the interface knows when an attached peripheral requires DMA service. Thus some connecting signals must exist between the interface and the DMA machine and between the DMA machine and the processor. To give the interface a means of requesting service from the DMA machine, let's add a signal called DMA Request (DMAR) to the collection of signal lines on the I/O bus.

Upon receipt of a DMA Request, the DMA machine must request bus control from the processor. If the processor decides that the request comes at an inopportune time, it can temporarily withhold transfer of control. This is a job for the ever-present handshake! Let's create two handshake

lines. Bus Request and Bus Grant. The DMA machine will ask for bus control with Bus Request and will take control after receiving a signal on Bus Grant. As a result, the processor can maintain control of the memory and address buses as long as required.

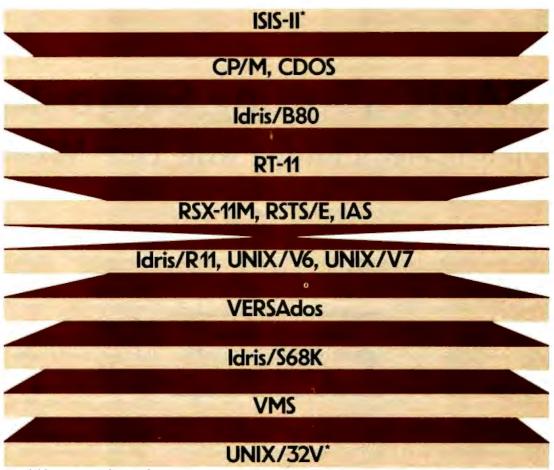

The kind of DMA I've been discussing is called burst DMA because the data transfer is done in a burst during which the DMA machine totally controls the memory and I/O buses. This provides the I/O with the full speed of the memory bus at the expense of completely halting processor activity. If half the memory bus bandwidth were sufficient to solve the high-speed I/O problem, we could use another type of DMA called cycle-steal DMA. In the cyclesteal arrangement, the DMA machine alternates control of the buses with the processor, each using every other memory cycle. Cycle-steal DMA allows the processor to operate at 50 percent efficiency while still providing relatively high-speed I/O.

# Summary

It would simplify matters greatly if all devices could agree on data representation, format, signal levels, timing, or even the number of wires used for interconnection. Attempts at standardization have been made, but the swift pace of computer technology renders some standards obsolete before they're published. In addition, the need for compromises seems to arise with every new system. Older equipment also needs to be interconnected: otherwise, replacement of a computer would dictate replacement of the entire system.

Fortunately, present technology can reach backward as well as forward. The computer itself can make adaptations, since computers excel at changing one value into another. Furthermore, interface circuitry that links the computer's memory or I/O bus to the I/O of the peripheral device can overcome hardware incompatibility. Next month I'll discuss two basic types of hardware interface presently used in computer systems: the parallel and HPIB (GPIB) interfaces.

# is now shipping Pascal Compilers for 10 (count'em ten) different operating system families:

'Available in source form only.

Idris is a trademark of Whitesmiths, Ltd. 

UNIX is a trademark of Bell Laboratories 

CP/M is a trademark of Digital Research 

RSX-11M, RSTS/E, 
RT-11, and VMS are trademarks of Digital Equipment Corporation 

VERSAdos is a trademark of Motorola Inc.

All implementations support the full ISO Pascal (Level 0). All pass the Tasmanian Validation Suite with flying colors. And all are free of those tempting non-standard extensions—because we added the only extension you need.

Separate Compilation.

You can partition your Pascal program into separately maintainable files. You can write library functions to add to the extensive set we give you (about 100 of them). And you can mix in modules written in other languages, like assembler (if you must) or C (to preserve portability).

In fact, C language support comes with every Pascal Compiler we sell.
Our native Pascal Compilers are only \$950, including shipping in the continental U.S. Cross Compilers, for most combinations of host system and target machine, \$1350. Interested? Write or call.

# A BASIC Plotting Subroutine

# Sophisticated Plotting with Your MX-80

Lawrence J. Bregoli 106 South Longyard Rd. Southwick, MA 01077

Since the introduction of the MX-80 printer, several articles have described most of its outstanding features, including the remarkable print quality for the price, I'd like to showcase another great feature of this printer: its ability to plot data curves. By combining its features with simple software routines, the MX-80 can emulate sophisticated plotters.

### Plotter Criteria

Several features constitute a good plotting routine, First, it should be a subroutine that, when called, plots data generated in the main program and, if needed, returns to the main program with the data unmodified for further processing. Second, the plot routine should be automatically scaling so that the operator of the main program doesn't have to worry about keeping tabs on all the maximum and minimum values sent to the plotting routine. Last but not least, the hard-copy output should have enough resolution to allow in-

### About the Author

Lawrence 1. Bregoli has a bachelor's degree in electrical engineering and is currently employed as a research engineer working on electrochemical aspects of fuel cell research at UTC in South Windsor, CT.

terpretation of the data. After all, that's why a plot was deemed necessary in the first place.

# Once a linefeed is generated, there's no turning back.

The MX-80 printer easily meets these criteria, as evidenced by figure 1. The plot is a straight line of the form y=mx+b. Note that the plotting routine provides its own graph paper by inserting horizontal and vertical grid lines; legends for both axes are included. Ah, you say, any print routine could handle a straight line with ease. Figure 2 is a better test of the printer and plotting routine. Here, concentric circles are plotted with radii of 1 and 0.5. Note that the auto-scaling routines in this case must handle both positive and negative values, and that, although the circles are not perfect, they have enough resolution for most plotting applications.

Resolution of these plots is set by the maximum number of data points allowed by the plotting routine. In the plots shown, the number of points

was limited to 101 X,Y pairs. The number of points chosen was based on several criteria. First, the maximum number of print positions that can be set in the horizontal direction is 132. Using 101 of these positions for data plotting leaves 31 positions for printing the Y-axis scale values and the Y-axis title. In the vertical direction, the MX-80 can be set so that every linefeed increment moves the paper up by as little as 1/2 inch. Therefore, resolution to a single printed dot can be obtained. I chose only 101 points in the vertical direction for several practical reasons. In most cases, this is all the resolution needed to obtain a smooth fit of the data. Most important, though, each data point plotted takes time to print, and the increased printing time is not warranted in most cases.

# About the Program

The program for generating the plots, shown in listing 1, was written in Microsoft MBASIC 5. The size of the program can be cut down considerably by removing the REM statements and by combining several program lines into one multiple-statement line. As written, the program doesn't need a main program to gen-

# MORROW DE Non Steen

# Leading edge technology in hard disk systems.

Complete systems. Morrow Designs hard disk subsystems are delivered complete with hard disk, controller, cabinet, power supply, fan, cables and CP/M' 2.2 operating system.

Widest range. Morrow Designs offers the widest range of hard disk systems available from a single supplier. 5¼," 8," 14." Five to over 100 megabytes of formatted hard disk storage. \$2,995 to \$17,980. Cost effective systems that work. And keep working.

**S-100 and more.** Morrow Designs hard disk systems are designed for use with the CP/M operating

system. Available software packages allow our systems to run on any IEEE696/S-100 Standard system with no hardware modification. Plus, Cromemco,\*\*\* North Star,\*\* Vector Graphics, Godbout, Dynabyte, Exidy,\*\*\*\* IMSAI, Micromation, Processor Technology and California

Computer Systems.

Reliable systems. Morrow Designs is committed to hard disk system reliability. Not simply with a 90-day warranty, but with a money back guarantee. If our system fails to perform to specification, send it back. We'll send back your money.

Experience. As of April, 1981, there were over fifteen hundred Morrow Designs hard disk systems successfully installed. In fact, over 200 independent systems integrators now use our hard disks to solve their mass storage problems.

Performance answers. Morrow Designs hard disk systems have been benchmarked against all other systems. None is faster under CP/M. Morrow Designs hard disks operate at 10 times the speed of a floppy disk drive. Transfer rates range from 590,000 bytes to 900,000 bytes per second. That kind of performance can become addictive.

Cost effective answers. Compare Morrow prices and performance to anything presently available for S-100 systems. You'll find Morrow's price/megabyte/

performance ratio to be unmatched. Leadership in disk systems technology earned us leadership in price/performance. And

that may have earned us a call from you. Circle the Reader Service Number for our full line data sheets. Can't wait? Call us at (415)

524-2101. And yes, OEM quantity prices are available. LOOK TO MORROW FOR ANSWERS.

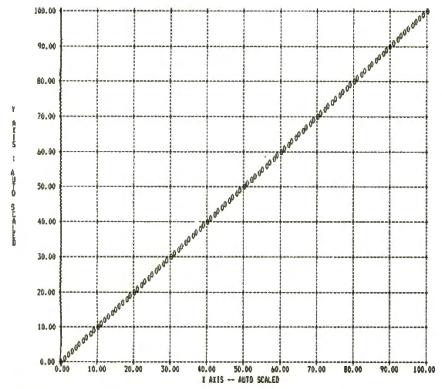

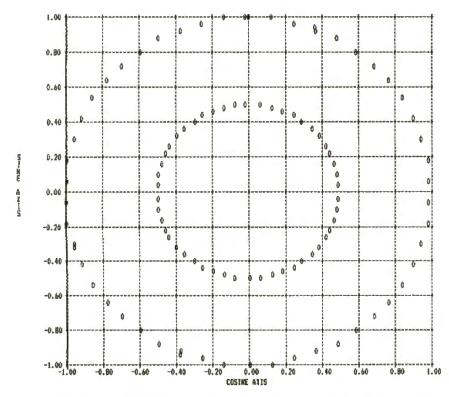

Figure 1: Sample plot of a straight line using auto-scaling (y=mx+b, b=0).

**Figure 2:** Sample plot of concentric circles using auto-scaling (radii=1 and 0.5).

erate X, Y data sets. It was written this way so that it could be tested immediately for errors using data generated in lines 5120 through 5200. In normal operation, the DIM statement in line 5160 would be in the calling program, and the entry point to the plotting routine would be at line 5250. Line 5670 would also be changed from END to RETURN,

Lines 5250 through 5310 allow the user to enter the graph's title and legends for the X and Y axes. These strings are then centered in 50-character strings so they are printed at the center of the X and Y axes, independent of the title or legend length. Manual or automatic scaling can then be selected by answering the prompt in line 5320.

The main body (lines 5460 to 5670) and its subroutines are where the real plotting action occurs. Most dot-matrix printers print from the top of the page down and do not allow this top-down mode to be reversed. The MX-80 also fits into this category. The resulting limitation forces special handling of the data to be printed so that all the data of a given Y value is printed on a line before the next line-feed occurs. Once a linefeed is generated, there's no turning back to print another data point on the line above it.

In the main body, the first few lines set up the printer for 132 characters per line and 1/36 inch per linefeed. With these settings, a plot size of somewhat over 51/2 inches in both directions is obtained when two linefeeds are performed for each of 101 data positions in the Y direction. Line 5520 performs a very important function in that it converts the line number position presently being pointed to on the plot to a numeric value proportionate to the total span of the data, which is set by the maximum and minimum scale values. (I didn't even understand that!) In other words, consider line number 100 to be at the top of the plot and line number 0 at the bottom; also suppose that  $Y_{MAX} = 1$  and  $Y_{MIN} = -1$  as shown in figure 2. Then, if the present line number were 20 lines down from the top, the value of YN would be:

Listing 1 continued on page 148

$$YN = 1 - (((1 - (-1))/100) \times (100 - 80)) = 0.6$$

This value is subsequently tested against the data in the PLOT DATA subroutine. If a match with any data in the Y array occurs, a point is plotted at the proper X position as determined by the value in the corresponding X array.

The overall action performed on any given line can be summed up as follows:

- 1. The value of YN is calculated.
- 2. A character in the Y-axis title is printed.
- 3. The vertical grid line segments are printed.
- 4. The data is plotted for that line, if
- 5. If a horizontal line is called for, it's printed along with the scale.
- 6. The cycle is repeated for the next line down.

A special precaution must be taken to ensure exact horizontal indexing on printers like the MX-80, as they use bidirectional printing. Because the print head doesn't physically return to the left-hand stop each time a new line is printed, a slight but distracting misalignment occurs in the vertical grid lines. To overcome this, lines 5500 and 5590 were inserted to force the print head to the left prior to each new line printed. If you take a close look at the left-hand vertical grid lines in figures 1 and 2, you can see this slight misalignment. If your particular printer is perfectly aligned or if you can put up with a slight misalignment error, then remove these line numbers. Removal of these lines will save a lot of time in actually plotting the data.

While I'm on the subject of time, it takes about eight minutes to complete a plot using the program shown in listing 1. This may seem a bit long to some users, but consider plotting 101 X,Y points by hand from a table of data, I'd rather sip my coffee and watch the MX-80 go about that agony. Later, I'll discuss a way to take about two minutes off this time,

Another program statement which

DIABLO

Eliminates noise, vibration problems. Originate/ Answer. Bell 103. Cassette port saves data.

Money back if not delighted

129<sup>95</sup>

MFJ-1230 INDUCTIVE COUPLED MO-DEM eliminates room noise, vibration caused by acoustic coupling. Gives more reliable data transfer. Used like acoustic modem. 0-300 Baud, Ball 103 compatible. Originate/Answer, Half/Full duplex, RS-232, TTL, CMOS compatible. Use any computer. Cassette tape ports save data. 110VAC or 9V batteries. Crystal controlled. Carrier detect, power LEDs. 9x1 ½x4". MFJ-1231, \$39.95. Optional cable, software for Apple II, II Plus. Plugs Into game port. No serial board needed.

\$995 MFJ-1108, AC POWER CENTER. Adds convenience, prevents data loss, head bounce, equipment

damage. Relay latches power off during power transients. Multi filters isolate equipment, eliminate interaction, noise, hash. Varistors suppress spikes. 3 isolated switched socket pairs. 1 un-switched for clock, etc. Lighted power, reset switch. Pop-out luse. 3 wire 6 ft. cord. 15A/ 125VAC, 1875 watts. Aluminum case. Black, 18x24x2". MFJ-1107, \$78.95. Like 1108 less relay. 8 sockets, 2 unswitched. Other models available.

MFJ-1240 RS-232 TRANSFER SWITCH. Switches computer between 2 peripherals (printer, terminal, modem, etc.). Like having extra port. Pushbutton switches 10 lines (pins 2,3,4,5,6,8,11,15,17,20). Change plug or cable to substitute other lines. Pushbutton reverses transmit - receive lines. LEDs monitor pins 2,3,4,6,6,8,20. PC board eliminates wiring, crosstalk, line interference. 3 RS-232 25 pin connectors. 7x2x6 Inches.

Order from MFJ and try it. If not delighted, return within 30 days for refund (less shipping). One year unconditional guarantee.

Order yours today. Call toll free 800-647-1800. Charge VISA, MC. Or mail check, money order. Add \$4 00 each for shipping and handling.

may be difficult to interpret occurs in the PLOT DATA subroutine. Line 6040 compares a data value in the Y array with the value of YN discussed above. If the value in the Y array equals YN plus or minus 51 percent of the value between lines, it's printed on the plot at an X position determined by the corresponding value in the X array. This value (XP) is calculated in line 6050. The PLOT DATA subroutine checks every data value in the Y array each time the subroutine is called to make sure that

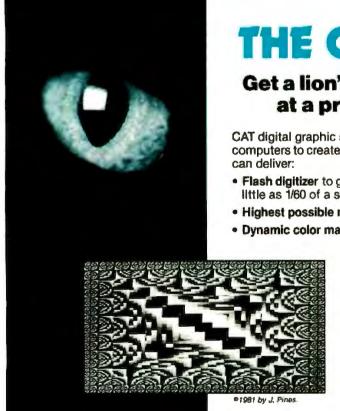

all data corresponding to YN is plotted before a new value of YN is calculated and a new linefeed occurs

## **Automatic Scaling**

The type of automatic scaling used in a plot program can be one of the most critical factors in determining usefulness of the resulting plot. I've run programs containing auto-scaling features that actually make the resulting plot worthless. These programs seem to be written so that the highest data point falls on the top line and the

lowest falls on the bottom line-without any consideration of the intermediate scale values. This type of scaling is the easiest to implement but makes data interpretation extremely difficult. One of the problems in developing auto-scaling routines involves individual perference regarding the scales selected. Some people may prefer the type of scaling mentioned above, some may choose scale deltas that vary in the 1-2-5 sequence which many analog plotters have adopted, and others may accept any sequence as long as it has integer values. Because of this, I've written auto-scaling routines in which you can tailor the scaling sequence simply by inserting a new DATA statement with user-selected values.

The auto-scaling subroutines start at line 6550. The extreme values in both the X and Y arrays are determined in lines 6550 through 6610; then the X and Y scales are determined. Determination of the scales starts by restoring the DATA statement in 6830. Then the minimum scale delta

# THE CAT'S-EYE VIEW

# Get a lion's share of graphic capabilities at a price that will make you purr.

CAT digital graphic systems interface with S-100, PDP-11, LSI-11 and other host computers to create incredibly detailed images. Look at the features that a CAT can deliver:

- Flash digitizer to grab your image from camera, broadcast or recording in as little as 1/60 of a second.
- Highest possible resolution—up to 484x512x8, 242x512x16 or 242x256x24.
- Dynamic color mapping to produce animation and other effects.
  - Maximum color palette of 16.7 million hues, with displays of 65,536 simultaneous colors or 256 levels of gray.
  - Light-pen input and other useful options.
  - Flexibility to fit your computer imaging needs within the CAT-100 through CAT-800 and CBX series. Call us for a CAT that suits your application . . . and your budget.

# The New Idea Computer from TeleVideo® Systems.

# Two great single-user computers that can grow for multi-user applications when you need it.

We're bursting with new ideas when it comes to small business computers and peripherals designed to give you much more value for your money. That's why we've zoomed to our No. 1 position among independent suppliers of CRT terminals. We make it our business to get new ideas to market first. So, meet our latest new idea. The Model TS 802.

The new TS 802 has been designed with upgradeability and growth in mind. You can start out with a Model TS 802, using it as a powerful, single-user work station with a full data processing and word processing capability. Then, as your computer needs expand, you can add our TS 806 or TS 816 multi-user hard disk system to build a versatile multi-station mass storage computer for up to 16 users and 70 Mbytes of on-line storage.

The TeleVideo TS 802 computer. It can grow as your needs grow. That's computer power with no restrictions or hassles. Now, that's a real new idea!

# **New Technology Galore**

Looking at the hardware, our new idea TS 802 Series comes in two different versions. The TS 802 features two 5¼-inch floppy disks for 1 Mbyte of on-line storage, a Z80A microprocessor, 64K or RAM memory, and a 4K EPROM for diagnostics. The TS 802H computer has one 5¼-inch Winchester disk drive with 10 Mbytes of on-line storage, and a single 500 Kbyte minifloppy disk unit. Both versions come in an attractive, low-profile desktop enclosure that can enhance any modern office decor.

### Nationwide Service:

All computers are backed and serviced by General Electric's Instrumentation and Communication Equipment Service Centers.

Circle 381 on inquiry card.

# **Worth Looking Into**

Both versions of the TS 802 computer offer an easy-to-read green phosphor CRT display with an exclusive patented character resolution that spells goodbye to eyestrain. The telescreen gives you advanced editing with wraparound, smooth scrolling, special graphics characters, and versatile screen attributes. And the detachable keyboard can be placed conveniently anywhere you want it.

## Just the Software You Want

In its stand-alone mode, our new TS 802 Series uses the \*CP/M\* operating system. In the multi-user mode, each TS 802 satellite user station runs CP/M under TeleVideo's unique ‡MmmOST™ Service processing system that provides scheduling, file/record locking, and data base access control formerly only possible with much more expensive and sophisticated multi-user operating systems.

### The Price is Right, Too!

Our *new idea* Model TS 802 computer is priced at just \$3495. And the Model TS 802H is only \$6995. These two revolutionaries can deliver *new idea* features you might have to pay \$30,000 for elsewhere. If you want to get down to business, try a new idea computer from TeleVideo today.

(MSD) is determined, based on the data extremes. This value is the smallest that can be used between major scale divisions yet still fit all the data on a plot with ten major divisions. Line 6640 starts a

FOR. . . . NEXT loop which selects the multiplier for the scale divisions; the nested FOR. . . . NEXT loop beginning at line 6650 selects the value of the major scale divisions using the DATA statement in line 6830. Lines 6660

through 6710 then use this information to determine new maximum and minimum scale values which in turn are used in the data plotting routines. Scaling of both the X and Y axes is handled in the same manner.

Although the logic of these routines would become quite clear with some study, you don't have to understand these routines at all to select your own personalized auto-scaling factors. Simply change the DATA statement in line 6830 and the limit of the FOR. . . NEXT loops in lines 6650 and 6750. For example, suppose you like any even integer scaling. Change the DATA statement from 1, 2, 5 to 1, 2, 3, 4, 5, 6, 7, 8, 9, and change the upper limits in the READ loops from 3 to 9. I don't like scales with increments of 3, 6, 7, 8, or 9 and typically use a scaling of 1, 2, 2.5, 4, 5. As I've stated, though, this depends strictly on your esthetic values. The program uses 1, 2, 5 scaling as an example.

Figure 3 is a plot of EXP(X) versus X using 1, 2, 2.5, 4, 5 auto-scaling values. Exponential curves such as

# JANUS 4

the language that is based on the past but looks to the uses of the future.

# Now You Can Have JANUS On Your System.

JANUS is a subset of the famous ADA language developed by the U. S. Department of Defense. This new language was designed to ease maintenance of programs, yet be easy to program in. ADA combines the best features of ALGOL and Pascal to produce a powerful programming language. ADA puts an emphasis on Modular programming and program portability.

The JANUS implementation of an ADA subset includes features found in no other micro-processor programming language. It features true modular programming, where the computer, rather than the programmer, remembers which modules are being used. JANUS also features full error walk-backs and line number error messages. And there is much, much more.

8086

# The JANUS system comes complete — no other programs to buy — It includes:

- Compiler
- Screen Editor
- Assembler
- Linker
- Disassembler
- Full Documentation

The JANUS package produces ROMable, Re-entrant 8080, optimized Z80, or 8086 machine code.

You too can take a step forward into the future.

8080 or Z80, CP/M (requires 56K memory) — \$300.00 8086, CP/M-86 or 86-DOS (requires 64K memory) — \$400.00

JANUS is supplied on IBM formatted, single density 8" floppy disks. Other formats are available.

CF M and CF-M 86 are tradements of Digital Represents for 86-DDS to a Hademark of Seattle Cambular fine. \* ADA is a tradement of the U.S. Desartment of Galance.

# IBM's new baby just grew up.

# SEATTLE COMPUTER'S NEW RAM+ GIVES YOU THE MEMORY YOU NEED AT A PRICE YOU CAN'T FORGET.

A great new machine, the IBM personal computer, just got better. With RAM+, the new expansion memory from Seattle Computer.™

RAM+ can change your personal IBM from a pony to a workhorse by adding up to 256 K of memory. RAM+ is expandable, reliable and is made by Seattle Computer, the people who created the operating system for the IBM personal computer.

To make your IBM work even better, each RAM+card has a RS-232 serial port which uses IBM supplied software. And RAM+ comes fully assembled, tested and with a 90 day guarantee.\* The RAM+ is available in 64 K, 128 K, 192 K or 256 K, with affordable prices ranging from \$475. to \$1,075. Expansion kits are also available.

How to order: Call Anna Ford at (206) 575-1830 for the location of the nearest RAM+ dealer.

The RAM+ —a great addition to your IBM personal computer. At a great price.

Dealer inquiries welcome.

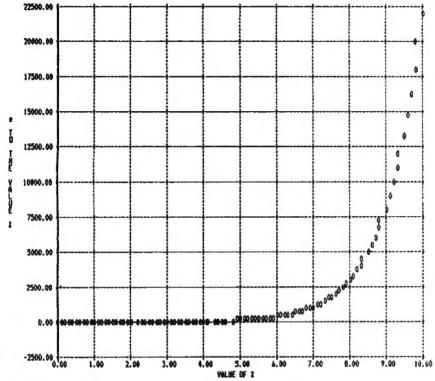

Figure 3: Sample plot of exponential curve using auto-scaling (Y = EXP(X)).

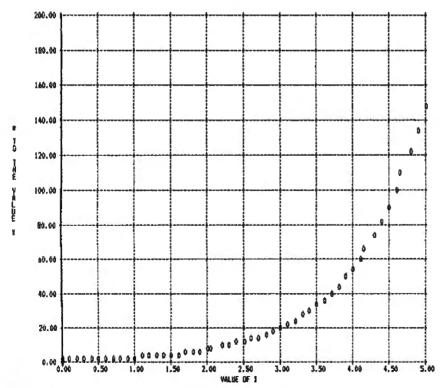

Figure 4: Sample plot of exponential curve using manual scaling (expanded section of figure 3).

the one shown are particularly difficult for any linear plot routine to handle because of the wide range of values usually involved. It's obvious from figure 3 that much of the data falls below the Y value of 200 and below the X value of 5. With this type of data, it's sometimes desirable to have a higher-resolution plot of this section of the data. You can accomplish that by now replotting this section of data using the MANUAL feature of the program. Figure 4 shows a plot of the same data with the Y scale manually set from 0 to 200 and with the X scale manually set from 0 to 5. Use of auto-scaling to present all of the data and manual scaling to expand features of the overall plot can provide a very powerful tool for those who have to handle data regularly.

## Speeding It Up

As I mentioned before, this plotting routine isn't very fast and has never been optimized to make it faster. One obvious method to decrease the overall time is to presort the data prior to plotting it so that the PLOT DATA routine doesn't have to scan every bit of data each time through, Listing 2 shows the lines that have to be added or modified to sort and plot the data with the sort routine given. Inserting these lines will cut almost two minutes off each plot, but there's no free lunch here either, What price is paid for this speed-up feature? The data isn't the same as when it entered the routine, since the array numbers have been altered. You could save the arrays in other arrays to maintain the integrity of your data, but this will cost you variable space. Again, use of these options is strictly up to the user and the particular application.

I've written the software for a standard MX-80 without the Graftrax-80 option. Those of you having this option should delete the last part of line 5780, since the CHR\$(27)"2" is no longer needed.

Please feel free to write and let me know of any features of the MX-80 or of the program I've missed that would reduce the plot time—my mailman will love it!

# **MICRO-TERM**

Gives You Complete Performance for the Price With Features Others Don't Have

# **MIME.740**

VT-100\* compatible terminal with advanced video and printer port standard. Additional features include two pages of memory, plain English set-ups, user programable function keys, diagnostic mode, X-OFF indication, and green screen with screen saver.

Better than all these features is the price.

# MIME-2A/ACT-5A

Fully featured smart terminals with smooth scroll, bi-directional printer port, function keys, editing, and four non-volatile video attributes. Both terminals feature 7x11 dot matrix with true descenders. MIME-2A emulates popular DEC, Hazeltine, and Soroc terminals.

# **MIME, 340**

Low end terminal with block mode, full editing, protected fields, printer port, host definable function keys, numeric keypad, green monitor and LEAR Siegler, Hazeltine or ANSI Codes. So reliable it carries a full one year warranty. Very smart – very inexpensive.

"VT-100 is a registered trade mark of Digital Equipment Corporation.

# Modify Your Paper Tiger for Different Paper Thicknesses

R. P. Sarna 39 Cushnoc Dr. Augusta, ME 04330

Are you tired of removing the printer cover of your Paper Tiger to adjust for different paper thicknesses? A simple modification can change all that.

The various Paper Tiger models produced by Integral Data Systems (IDS) are popular with microcomputer owners because they're rugged, reliable, extremely flexible in operation, and well supported by the manufacturer. That tremendous flexibility, however, is marred by one "bug" in the IDS 460. I use my highspeed printer to generate business

reports (using both single- and multiple-part copy paper), form letters, and address labels. This necessitates a change from thick address labels to thin fanfold paper to single sheets in holders to carbonless multiple-part copy-forms, and back again.

The paper-thickness control knob is located *inside* the cover. In order to adjust it, you must remove the cover, adjust the control, replace the cover (try not to snag the ribbon or damage the circuit board), and then run the printer to see if it's adjusted correctly.

If it isn't, you have to start all over again.

A simple modification solves this problem, making it easy to adjust to the proper paper thickness from *out-side* the printer. All you have to do is drill a hole in the cover and cut a slot in the adjusting rod for a screwdriver.

(Editor's Note: IDS says that this modification isn't necessary for the newest version of the model 460, as there is a lever attached to the paperthickness control knob which allows it to be adjusted from outside the printer. You can purchase this lever and knob by contacting Customer Support Group, Integral Data Systems Inc., Milford, NH 03055. If you choose to make the modifications described in this article. IDS says it will still repair its printers no longer under warranty, as long as the printer mechanism itself has not been modified....SIW)

The first step is to locate the position for the hole. Put the printer on a light-colored table or piece of paper and remove the cover. Set a drafting triangle or a small carpenter's square on the table (see photo 1) and make a mark on the table or paper directly below the center of the paper-thickness control knob. Then mark on the triangle the height of the center of the control knob from the table. Without moving the printer, carefully replace the cover. Using the marks on the table and on the triangle, find the spot on the cover where the two marks intersect (see photo 2). Mark

**Photo 1:** Use a square or a drafting triangle to mark the table directly beneath the center of the knob. Measure the height of the shaft above the table and mark the triangle.

Photo 2: After replacing the cover, use the square to mark the hole location on the cover.

Photo 3: Slotting the end of the thicknessadjusting knob allows it to be adjusted with a screwdriver.

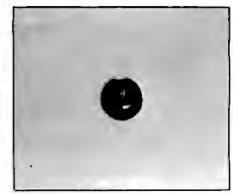

Photo 4: The hole in the cover opposite the paper-thickness adjusting knob allows easy access with a screwdriver.

this spot on the cover. This is the location for the hole you will drill.

Next, remove the cover from the printer. As you begin to drill the hole, let the drill bit turn slowly (I used a sharp %-inch drill and a drill press for an accurate hole). Make the hole large enough to allow a screwdriver to be inserted easily.

Use a fine-tooth hacksaw to cut a slot in the shaft (see photo 3), and watch out for the circuit board and the wires attached to it. I chose to make a slot that is horizontal when the print head is at its closest setting so that I could use it as a reference point. Once the shaft was marked, however, I turned it 45 degrees clockwise to cut it, making it less awkward to work on. Saw through the knob and the shaft until you have a screwdriver slot about 1/16-inch deep. Then clean out all the shavings from the printer.

Replace the cover, erase any pencil marks, and adjust your printer from the outside (see photo 4). I find that the screwdriver blade on my jackknife fits perfectly. It's easy to set the proper adjustment while the Paper Tiger is printing its test pattern on the type of paper you will be using. I also marked the positions of the slot for various paper thicknesses on the cover of the printer, so that I can quickly set the different adjustments.

### S-100 USERS

# INTERFACE 9-TRACK TAPE DRIVES

With the DTI - DMA **Tape-Unit Interface** 

- Transfers data via DMA up to 200K bytes per second
- Allows full control over all tape-drive functions

# **Programming Quickies**

# **BASIC** Formatted Printing

Dr. Malladi Subbaiah 301-46 Caltech Pasadena, CA 91125

How often would you like to have the results of a computation printed in a selected format? Unlike FORTRAN or Extended BASIC, a minimal BASIC such as TI BASIC does not usually have FORMAT statements. Listing 1 shows a routine that I developed to obtain printer output in any desired format with my BASIC programs. The routine, written in TI BASIC (although it can easily be adapted to other BASICs), is simple to use because the PRINT statement can directly access the user-defined format functions without any conditional transfers.

To use the format routine in a program, you must include the statements in lines 230 through 320 in your program before the first PRINT statement. Line 510 is a typical example of such a PRINT statement. Titles and string variables are printed using a PRINT statement like that shown in line 490.

An example of the formatted output is shown in figure 1b. The results would have been printed as in figure 1a if a regular PRINT statement with semicolon print separators (line 470) was used. (Figures 1a and 1b are on page 164.)

The formatting routine takes advantage of the string variables used in TI BASIC. To print a real variable, say X, print the formatted string RF\$(X). Similarly, use IF\$(I) to print an integer, I. To obtain print titles, use RFT\$(X\$) to print X\$ as the title associated with the real numbers. IFT\$(I\$) is a similar function for titles of integer fields. RFT\$(X\$) and IFT\$(I\$) can, of course, be used like RF\$ and IF\$ to print any string variables.

The format field is controlled by the variables FL, FD, and IL (see the DATA statement on line 250). FL and IL represent the total length of the field for real and integer variables, and FD is the number of decimal places chosen for the real numbers. The real numbers are rounded off to the desired digits. (The effect of the two format descriptions is similar to using the FORTRAN statements FOR-MAT(F FL.FD) for real numbers and FORMAT (I IL) for the integer numbers.)

The program prints right-justified entries in the userselected field in both real and integer formats. When the value of the variable is larger than can be accommodated in the allocated field, a starred output is printed as shown in figure 1b.

Listing 1: The format routine embedded in this program (lines 230 through 320) allows control of printer output without the use of FORMAT statements.

# **WESTICO** —The Software Express Service that really delivers:

# **IIILANGUAGE IIIPROCESSORS**

When it comes to providing quality programs for serious microcomputer users — come to Westico. And you'll find more than quality software. You'll find instant response. In most cases, your order will be shipped within 24 hours. You'll also find the technical expertise on staff when you need help. For language processors and lots more, it's Westico. Here's just a sample of the more than 150 quality programs currently in stock:

programming language for microcomputers. Implements on a micro the ANS Subset G language for minicomputers. Includes native code compiler, LINK-80 linkage editor, LIB-80 subroutine library manager. PLILIB run-time library and RMAC relocatable macro assembler. \$475/\$35. LINK-80 and RMAC also available separately.

BT-80 — Efficient B-tree key Indexed access method for PL/I-80. Features key length to 63 bytes, unique or duplicate keys, and data records to 4096 bytes. Datasets can be spread over 8 files for a total of 64 megabytes. \$200/\$30.

HASIC-80 — Extremely fast interpreter features double precision floating point math, 40 character variable names, CHAIN/COMMON, random and sequential files, EDIT, CALL with parameters and an overlay technique. \$350/—.

EASIC COMPILER — Compatible with BASIC-80. Produces extremely efficient, optimized 8080/Z80 machine code. Includes macro assembler, linkage editor and subroutine library manager. Compiled programs can be linked with FOR-TRAN-80, COBOL-80, and assembly language programs. \$395/—.

cnasic — BASIC language compiler/interpreter for development of financial and business application programs. System \$120/\$20.

CBASIC — Implementation of CBASIC for CP/M-86, INT files compatible with CBASIC and supports 128K main memory. Requires CP/M-86 or MP/M-86. \$325/\$30.

cB-BO" — Native code 8080 compiler of CBASIC language. Offers all of the features of CBASIC plus the speed and versatility of a compiler. Includes linkage editor which can create overlay modules. Supports CP/M and MP/M II. \$500/\$30.

FORTRAN-80 — Includes full ANSI standard X3.9 except COMPLEX data type. \$500/—.

editor for creating COM files from Microsoft compatible REL files. Constructs programs that use all available memory including that used by LYNX itself. Program size can be increased at least 9K without using the overlay feature. The overlay option is vital to programs larger than available memory. Easy to use with BATCH and HELP commands. \$250/\$25.

PASCAL/MT+\*\* — Compiler produces 8080/Z80 code. Standard REL file can be linked with other languages. Includes linker, debugger disassembler and special Speed Programming Package with editor and Pascal syntax checker. \$475/\$30.

COBOL-80 — Complies with ANSI Level 1 requirements and most useful features of Level 2. SCREEN SECTION for definition of CRTs. \$750/—.

\*\*ASMXX\*\* — Family of microprocessor cross-assemblers. Designed to run on 8080/Z80 based microcomputers under a CP/M-like operating system. Support for Motorola 6800, 6801, 6803, 6805, 6809; RCA 1802; COP400; Intel 8048, 8051; MOS 6502. \$200/\$25.

\*\*LT86\*\* — Translates Intel 8080 assembly language source code into optimized Intel 8086 source code. \$150/\$10.

The Westico 24-Hour Computer Hotline (203) 853-0816 (300 baud) for detailed information and quick

 Westico has more than 150 programs for professionals and businesses that use a wide variety of microcomputers including: TRS-80 Model II, Apple, Vector Graphic, Cromemco, North Star, Micropolls, Ohio Scientific, Altos, Dynabyte, IBM, Intertec, Xerox, Zenlth, Northern Telecom, AVL Eagle and more. We're working hard to be your software company.

# Epson MX-80 Print-Control Program for the Apple II

Bill Starbuck 2100 East Edgewood Ave. Shorewood, WI 53211

How many times have you, after buying a new "toy" for your computer, installed the hardware, read the manual carefully, and played with the equipment until its functions become familiar, only to go back to your regular activities and forget much of what you've learned?

This is what happened after I bought my Epson MX-80 printer. I studied the manual conscientiously and learned all the printer-control codes. For weeks thereafter, I did nothing with the printer except turn it on and off. By the time my Epson Graftrax-80 bit-plot graphics option arrived, I had forgotten how the printer worked.

This time I entrusted the information to the Apple's memory instead of my own. I wrote a print-control program in Applesoft BASIC, called MX-80 (see listing 1), that I keep on disk with my Applewriter text editor.

When the program is run, the screen displays a menu of available printer options (see figure 1). The on-screen display has some of the instruction codes highlighted as black on white. The highlighted options are the choices transmitted to the printer when one of the three termination codes (EDITOR, PRINTER, or OUIT) is entered. To review the inventory of (nongraphics) printer signals, I can choose the INVENT option.

There is no way to query the printer about its current status, so the program records a status file, called MX.STATUS, that recalls the last instructions sent to the printer. This status file is used to initialize the program the next time it is run. The status file is especially convenient when a given typeface is used repeatedly. So that there will be a file for the print-control program to read

The Percom Peripheral

35 cents

# Percom's DOUBLER II tolerates wide variations in media, drives

GARLAND, TEXAS — May 22, 1981 — Harold Mauch, president of Percom Data Company, announced here today that an improved version of the Company's innovative DOUBLER<sup>58</sup> adapter, a double-density plug-in module for TRS-80° Model I computers, is now available.

Reflecting design refinements based on both theoretical analyses and field testing, the DOUBLER II\*, so named, permits even greater tolerance in variations among media and

drives than the previous design.

Like the original DOUBLER, the DOU-BLER II plugs into the drive controller IC socket of a TRS-80 Model I Expansion Interface and permits a user to run either single- or double-density diskettes on a Model I.

With a DOUBLER II installed, over four times more formatted data - as much as 364 Kbytes - can be stored on one side of a fiveinch diskette than can be stored using a standard Tandy Model I drive system.

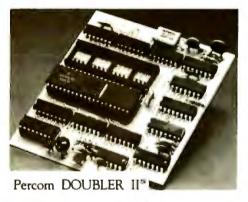

Moreover, a DOUBLER II equips a Model I with the hardware required to run Model III

(Ed. Note: See "OS-80": Bridging the TRS-80" software compatibility gap" elsewhere on

The critical clock-data separation circuitry of the DOUBLER II is a proprietary design called a ROM-programmed digital phase-lock

loop data separator.

According to Mauch, this design is more tolerant of differences from diskette to diskette and drive to drive, and also provides immunity to performance degradation caused by circuit component aging.

Mauch said "A DOUBLER II will operate just as reliably two years after it is installed as it will two days after installation."

The digital phase-lock loop also eliminates the need for trimmer adjustments typical of analog phase-lock loop circuits.

"You plug in a Percom DOUBLER II and

then forget it," he said.

The DOUBLER II also features a refined Write Precompensation circuit that more effectively minimizes the phenomena of bitand peak-shifting, a reliability-impairing characteristic of magnetic data recording.

The DOUBLER II, which is fully software compatible with the previous DOUBLER, is supplied with DBLDOS®, a TRSDOS'-

compatible disk operating system.

The DOUBLER II sells for \$2005, including the DBLDOS diskette.

The Percom DOUBLER II is available from authorized Percom retailers, or may be ordered direct from the factory. The factory toll-free order number is 1-800-527-1222.

Ed. note: Opening the TRS-80 Expansion Interface may void the Tandy limited 90-day warranty. Circle 309 on inquiry card.

### All that glitters is not gold

# OS-80<sup>10</sup> Bridging the TRS-80\*

software compatibility gap
Compatibility between TRS-80\* Model I diskettes and the new Model III is about as genuine as a gold-

plated lead Krugerrand.

True, Model I TRSDOS\* diskettes can be read on a Model III. But first they must be converted and re-

recorded for Model III operation. And you cannot write to a Model I TRSDOS\* dis-kette. Not with a Model III. You cannot add a file. Delete a file. Or in any way modify a Model I TRSDOS diskette with a Model III computer.

Furthermore, your converted TRSDOS diskettes cannot be converted buck for Model I operation.

TRSDOS is a one-way street. And there's no retreating. A point to consider before switching the company's payroll to your new Model III.

Real software compatibility should allow the direct. immediate interchangeability of Model I and Model III diskettes. No read-only limitations, no conversion/re-recording steps and no chance to be left high and dry with Model III diskettes that can't be run on a Model I.

What's the answer? The answer is Percom's OS-8044 family of TRS-80 disk operating systems.

OS-80 programs allow direct, immediate interchangeability of Model I and Model III diskettes.

You can run Model I single-density diskettes on a Model III; install Percom's plug-in DOUBLER® adapter in your Model I, and you can run doubledensity Model III diskettes on a Model I.

There's no conversion, no re-recording

Slip an OS-80 diskette out of your Model I and insert it directly in a Model III.

And vice-versa.

Just have the correct OS-80 disk operating system - OS-80, OS-80D or OS-80/III - in each com-

Moreover, with OS-80 systems, you can add, delete, and update files. You can read and write diskettes regardless of the system of origin.

OS-80 is the original Percom TRS-80 DOS for BASIC programmers.

Even OS-80 utilities are written in BASIC.

OS-80 is the Percom system about which a user wrote, in Creative Computing magazine, "...the best \$30.00 you will ever spend "# \$30.00 you will ever spend.

Requiring only seven Kbytes of memory, OS-80 disk operating systems reside completely in RAM. There's no need to dedicate a drive exclusively for a system diskette.

And, unlike TRSDOS, you can work at the track sector level, defining and controlling data formats—
in BASIC—to create simple or complex data struc-

tures that execute more quickly than TRSDOS files.
The Percom OS-80 DOS supports single-density operation of the Model 1 computer — price is \$29.95; the OS-80D supports double-density operation of Model I computers equipped with a DOUB-LER or DOUBLER II: and, OS-80/III — for the Model III of course — supports both single- and double-density operation. OS-80D and OS-80/III each sell for \$49.95. Circle 310 on inquiry card.

# Circuit misapplication causes diskette read, format problems. High resolution key to reliable data separation

GARLAND, TEXAS — The Percom SEPARATOR<sup>48</sup> does very well for the Radio Shack TRS-80\* Model I computer what the Tandy disk controller does poorly at best: reliably separates clock and data signals during disk-read operations.

Unreliable data-clock separation causes format verification failures and repeated read

### CRC ERROR-TRACK LOCKED OUT

The problem is most severe on high-number (high-density) inner file tracks.

As reported earlier, the clock-data separation problem was traced by Percom to misapplication of the internal separator of the 1771 drive controller IC used in the Model I.

The Percom Separator substitutes a highresolution digital data separator circuit, one which operates at 16 megahertz, for the lowresolution one-megahertz circuit of the Tandy design.

Separator circuits that operate at lower frequencies - for example, two- or fourmegahertz — were found by Percom to provide only marginally improved performance over the original Tandy circuit.

The Percom solution is a simple adapter that plugs into the drive controller of the Expansion Interface (EI).

Not a kit - some vendors supply an untested separator kit of resistors, ICs and other paraphernalia that may be installed by modifying the computer — the Percom SEPARATOR is a fully assembled, fully tested plug-in module.

Installation involves merely plugging the SEPARATOR into the Model I El disk controller chip socket, and plugging the controller chip into a socket on the SEPARATOR.

The SEPARATOR, which sells for only \$29.95, may be purchased from authorized Percom retailers or ordered directly from the factory. The factory toll-free order number is 1-800-527-1222.

Ed. note: Opening the TRS-80 Expansion Interface may void the Tandy limited 90-day warranty. Circle 308 on inquiry card.

PRICES AND SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE.

PRICES DO NOT INCLUDE HANDLING AND SHIPPING.

# Wizard-80

# **INSTANT 80 COLUMN APPLE\***

The miracle of the 80's ... everything you want in an 80-column card.

# STOP STARING AT 40 COLUMNS

WIZARD-80 lets you see exactly what you will get when typing 80-column format. It gives you a full 80-column by 24-line display with all these features.

- Fully compatible with Apple II and Apple II Plus
- Fully compatible with most word processors, micro-modems and prom programmers, plus all current Apple II expansion boards
- Lists BASIC programs, integer and Applesoft
- Fully compatible with Pascal
- Uses software to switch between 40 and 80 column formats

- Displays 7 x 9 matrix characters
- Provides upper/lower case characters with full descenders
- Fully edits...uses ESCape key for cursor movement
- Scrolling stop/start uses standard Control-S entry
   Retains text on screen while it is being printed
- Contains crystal clock for flicker-free character display
- Has low power consumption for cool reliable operation
- Leads soldered directly to board for maximum reliability
- 2K on-board RAM, 50 or 60 Hz operation
- Inverse video selection standard

Available at all fine Computer Stores \$295.00

# Wizard-16K™

# **16K RAM APPLE MEMORY CARD**

Unleashes your Apple II\* and Apple II Plus\* computer.

### ON TO MAXIMUM MEMORY

Wizard-16 gives your 48K
Apple II or Apple II Plus the
last bit of directly accessible
add-on memory it can accept.
And, it interfaces with all
Z80\*\* cards to give you
CP/M\*\*\*

- Fully compatible with Apple II and Apple II Plus
- Adds 16K bytes of Random Access Memory (RAM)
- Fully compatible with Z80 microprocessor cards for CP/M
- Used with Z80 card, it turns your Apple II into a twomicroprocessor system with 56K of usable memory
- With a ZBO card, it lets you run BASIC-80\*\*\*\*

COBOL-80\*\*\*, FORTRAN-80\*\*\*\*, BASIC Compiler\*\*\*\*, and Assembly Language Development System\*\*\*\*, plus Applesoft BASIC\*, Integer BASIC\*, Apple Pascal System\*, Apple FORTRAN\* and Apple Pilot\*

- Utilizes Apple DOS 3.3\* 16-sector system to permit loading both Applesoft\* and Integer BASIC\*
- Compatible with VisiCalc\*\*\*\*\*
- Offers all features of Apple Language Card\* (except Autostart ROM)

Available at all fine Computer Stores \$149.00

Listing 1 continued:

Text continued from page 166:

the first time it is run, I've included a brief program, shown in listing 2, that creates a status file. (Listing 2 also

Listing 2: This program creates a disk file, called MX.STATUS, that is accessed by the program in listing 1. You must run this short program prior to running the MX-80 printer program for the first time.

10 REM THIS PROGRAM CREATES
A FILE, MX.STATUS, OF
PARAMETERS THAT ARE
USED BY THE MX-80
PROGRAM.

20 A = 1:A\$ = CHR\$ (4): PRINT A\$
"OPEN MX.STATUS": PRINT A\$"M
RITE MX.STATUS": PRINT A1 PRINT
A: PRINT A: PRINT A: PRINT A
\$"CLOSE MX.STATUS"

shows the italic font that is available with the Graftrax-80.)

The print-control program is designed for the Applewriter word processor, but can be adapted to other text editors by modifying lines 150, 160, 410, and 420. To use the program with Applewriter:

- 1. Enter S to save the text file.
- 2. Enter Q to quit Applewriter.
- 3. Enter RUN MX-80.
- 4. Turn on the printer.
- 5. Enter choices from the menu.
- 6. Enter Printer to quit the MX-80 program.
- 7. Enter L to load the text file.
- 8. Enter P to print.

Do not turn the printer off between running the printcontrol program and the actual printing because your choices will be lost as the printer resets to its default options (STANDARD, STRIKE1, NORMAL, SPACEN). You may switch the printer offline and manually advance the paper by pressing the formfeed or linefeed buttons without affecting the typeface settings.

# Grab a byte at the 5 & 10

12 bites, unless you're in a hurry

- 5 or 10 Mbyte (formatted) 5¼ " Winchester type hard disk
- Complete and ready to run with CP/M™ 2.2

# 5 or 10 Megabytes in a desk-top micro

If you need 5 Megabyte capacity grab our JUDERFIVE Grab our **SuperTen** for 10 Megabytes and join the hundreds of users world-wide.

- 700K or 350K floppy disk back up
- Dual Z-80A processors with 64K RAM
- 4 MHZ Clock frequency
- Dual RS232 ports
- Full ASCII keyboard, numeric pad, userprogrammable function keys

# Hardware Review

# Graphics II by Selanar

# High-Resolution Hard Copy from a DECwriter

Daniel Macero, Daniel Holmes Thomas Banks and Lloyd Burgess Department of Chemistry Syracuse University Syracuse, NY 13210

A picture, a thousand words, or both-that's what you can print out on a DECwriter II terminal outfitted with the Selanar Graphics II attachment. This versatile modification provides a host of features for the DECwriter (by Digital Equipment Corporation): high-resolution graphics, bidirectional linefeed, multiple character sets, the ability to print standard, boldface, and doublewidth characters that can be rotated in any one of four directions, and several other useful options that cost extra if purchased from DEC.

Our interest in this unit began when we saw it featured in the newproducts section of a digital-electronics trade magazine. We were especially interested in the claim that, with this attachment, a dot could be printed anywhere on a standard DECwriter page and that up to 1,045,440 points could be addressed. For \$850 (less a 5 percent educational discount), this seemed like a low-cost way to high-resolution graphics, so we ordered a Graphics II modification from Selanar Corporation.

In less than three weeks the unit arrived. The box contained the Graphics Il circuit board, a power cable consisting of three wires: blue, black, and orange (the same colorcoding used by DEC), six #8 nylon screws and nylon washers (already attached to the circuit board), and a user's manual.

## Installation and Testing

With the help of the user's manual. installing the Graphics II board was simple and straightforward. First, we examined the board for any damaged or loose components. (The manual provides a list of likely sources of trouble.) In our case, we found the ground connection of the TTL (transistor-transistor logic) interface socket (J4) to be loose and had to touch it up with a bit of solder: otherwise, everything was in order.

Next, the board was prepared for installation by selecting from the several available jumper options (i.e., parity, bell, serial interface, and datatransfer rate). Step-by-step instructions are accompanied by two fullpage photographs that show the inside of the DECwriter before and after installation of the Graphics II board. The photos are invaluable for locating and identifying the various components important to the installation.

Following the instructions given in the user's manual, the original DECwriter board was removed. (A screwdriver is all that is necessary for this and the following operations.) The Graphics II board was attached to the

DEC and DECwriter are trademarks of Digital Equipment Corporation, Maynard, Massachusetts.

# Now it can be Revealed GBS

The business software that solves problems your way.

So useful and adaptable it's like having an Award Winning programmer on staff.

## What is GBS?

GBS is both a powerful, relational data base management system . . . and, more importantly, a very powerful applications development tool. As such, it can deliver programs that match your specific business requirements . . . not just those of the average business. The final result is increased productivity now and in the future.

### Surprisingly Easy to Use

GBS has been honed and refined for two years, so it meets the needs of the user who wants programs that work without a lot of computerese! To that end, GBS operates with a simplified fill-in-the-blanks approach. The user merely fills in blanks and GBS does the rest . . . acting like an in-house programming whiz!

Since you need know **only 15 instructions** to utilize the full scope of GBS you should be able, after studying our exceptional documentation for a few hours, to develop your own business programs . . . general ledger, inventory control, order entry, job costing and more.

### Relational Data Base

Management of business records is a must for profitability. GBS handles it for you with unbelievable accuracy, speed and ease. For example, three data files of up to 64 thousand records and 1 million characters can be concurrently in use . . . and multiple indexes fully maintained (yes, fully maintained!). GBS . . . truly the quality solution in business software.

Only \$700. On disk, including documentation. Requires CP/M\*

Dealer and distributor inquiries invited.

ASCII character set, APL character set, Math/Greek character set, user-defined character set fload from keyboard or computer into memory), boldface: all characters; four rotations: all characters, double width: all characters

### Paper

Variable width 7.6 cm (3 inches) to 37.8 cm (14 ½ inches), up to 6-part forms 0.020 in maximum thickness; tractor-drive line feed

Power Requirements 120 V AC 50/60 Hz the terminal's power supply. This completed the assembly of the unit.

Sufficient warnings are included at each step to insure a virtually foolproof installation. Total installation time was about 30 minutes. After verifying that all connectors to the Graphics II board and all components on the board were secure, and that there were no loose parts, tools, or other items left on the circuit board or in the internal cabinet area of the terminal, the unit was ready for testing.

The testing procedure is straightforward and can be done without sophisticated test equipment. By switching the DECwriter to local operation, the user can run through the various features, including graphics, and verify that everything is working properly. Once everything is operational, the I/O (input/output) interface is checked and the printer is ready to use.

## Printer Adjustment

Our unit worked immediately and we were soon printing out the different character sets in boldface and double-width: however, some characters did not seem well formed. In addition, the tractor drive had a tendency to slip. The character problem, we were told, was caused by minor variations in parts such as the drive and stepper motors used in different DECwriters: this can result in different levels of performance depending on the user's specific terminal. To compensate for these variations, the Graphics II unit has built-in adjustments that can be set to obtain optimum performance. An oscilloscope, preferably one with dual-trace capability, is necessary for making these adjustments. The procedure outlined in the user's manual gives two types of adjustments: print columns and print-speed control. In our case, we simply adjusted the forward and reverse print-speed controls and the characters printed out perfectly.

In operation, the enhanced DECwriter can function as an unmodified terminal, as a terminal featuring many of the options offered by DEC at extra cost, and in the graphics mode (a completely new feature). System commands are selected by

# "We provide business programs as individual as your business needs."

"Allow me to introduce myself. I'm a Vector computer, dedicated to the advancement of society. And I'd like to tell you how a computer can help you manage your business more efficiently. Especially if that computer is a Vector, like me. Because we're probably the most flexible and cost-effective computers you can find.

"Our programs are the key. Because they enable me to handle sales forecasting, budgeting, job costing and proposals, commissions, personalized mass mailings, charts and graphs. We Vectors can even talk to each other and to other bigger computers.

"Unique combinations of our individual programs can actually customize me to meet your specific requirements. Any combination of our software packages can be assembled right off the shelf, to help you realize your full potential as a salesman, merchant, stockbroker, clergyman, contractor, real estate or insurance agent or whatever your business.

"Choose from Memorite III for word processing and mail list management, Execuplan for financial planning and forecasting, Business Accounting, Data Management for filing and sorting information, Communications and a host of others. And, of course, all we Vectors come with the popular CP/M operating system.

"For more information and your local dealer, call us at (805) 499-5831 or (800) 235-3547. In California, call (800) 322-3577. Or write to us at 500 North Ventu Park Road, Thousand Oaks, CA 91320.

"We'll show you how we small information systems can mean big business for you."

ì	cO	Normal character set	Selects normal character set.
ı	ESC 5	Print entire	Test mode.
ı		character set	
	ESC 7	Upside-down print mode	Rotates characters 180°
	ESC 8	Sideways I print mode	Rotates characters 90°.
	ESC 9	Sideways II print mode	Rotates characters 270°.
	ESC 0	Double-width characters	Prints double-width characters.
ı	ESC A	Boldlace characters	Prints each character in boldface,
ı	ESC C	Special reset	Returns DECwriter to normal configuration
	ESC F	Power-up reset	Resets all modes, character styles, tabs, and top of form (also occurs at power-up).
ı	ESC G	Up 1/4 line	Moves paper up 1/4 line at a time.
	ESC H	Down 1/4 line	Moves paper down 1/4 line at a time.
	ESC N	Third character set	Selects third character set (factory set for mathematics symbols and selected Greek letters).
	ESC P	Fourth character set	Selects fourth character set as defined in program- mable memory.
	ESC Q	Load-memory	Defines fourth character set to be loaded into pro-
		character set	grammable memory.
	ESC B	Enter graphics mode	Enters graphics mode. All characters ignored except "(" "," " "" "]", and digits 0 through 9
	ESC J	Set bar mode	In graphics mode, prints all seven dots instead of one at a time.

**Table 1:** Command codes used by the LA36 DECwriter II with the Selanar Graphics II modification. Codes in the table preceded by a lowercase "c" are entered by holding down the Control key while entering the indicated code (similar to the standard procedure for typing any uppercase letter by using the shift key). Other codes are entered by typing ESC (escape) followed by the indicated letter.

either a Control code or an ESC (escape) code. The Control code is obtained by simultaneously pressing the Control key and another key to select a given function. The ESC code is a two-step operation: first the ESC key is pressed, then the key that selects the desired function. Pressing ESC a second time cancels this command sequence. Table 1 is a list of some of the more important ESC and Control commands that function in the normal (nongraphics) and graphics modes.

Other system commands that can be implemented with Graphics II are horizontal tab control (advances the print head to the next column position with a set tab); vertical tab (advances the paper vertically to the next line with a vertical tab); set horizontal tab (sets a tab where the head is positioned, up to 16 tabs may be set); reset horizontal tab (resets the individual horizontal tabs at each desired head position); set vertical tab (sets a tab to any one or all of 16 vertical tab positions); and reset vertical tab (resets an individual vertical tab at the present position of the print head).

In addition, you can activate the bell, reset the top-of-form position, enable the automatic linefeed with carriage return, backspace, and issue a special *Here-is* message where up to

ESC C

Exit graphics mode

# Vistavision 80

Invisible or Invincible?
It all depends on your perspective.

The Vision 80° is a video display card that gives your Apple™ terminal an industry-standard 80 column by 24 line display screen with a full 128 character set including upper and lower case letters with three dot descenders. It is compatible with all existing Apple™ BASIC software and allows the use of 80 column lower case text with programs written in BASIC, FORTRAN Pascal, Microsoft CP/M™ and ASSEMBLER. Full communications driver support allows the Apple II™ to operate as an intelligent terminal

Definitely invincible. Ask Softalk magazine editors, who rated Vision 80<sup>©</sup> the Best Applevideo display card on the market.

But the Vision 80° card has an "Apple" command vocabulary including H-tab, V-tab, HOME, TEXT, PR# GRAPHICS). No changes in operating or programming procedures are necessary to produce whatever sophisticated displays you require. And it doesn't interfere with the operation of popular Apple compatible peripherals. Except for the enhanced display, it's as if you had never installed the Vision 80° in your Apple II computer.

Definitely invisible.

Ask your local computer dealer for a demonstration of the invincible, invisible Vision 80° video display card by Vista Computer Company. Or correspond with us directly: Vista Computer Company, Inc. 1317 East Edinger, Santa Ana CA 92705, (714) 953-0523. Toll free order line: (800) 854-8017.

Be sure to inquire about our new Vision 40, a softscreen programmable character generator for Apple II<sup>TM</sup> computers. It's great for graphics and perfect for foreign language applications.

# **Perceptive Perspective**

Vista\_

COMPUTER COMPANY, INC.

Circle 404 on Inquiry card. 1317 East Eding 714-953-0523

1317 East Edinger • Santa Ana, CA 92705 714-953-0523 800-854-8017 32 characters encoded in PROM (programmable read-only memory) are transmitted as if from the keyboard (e.g., for an automatic password sign-on to a remote computer).

## "Normal" Printing Operations

In the printing mode the Selanar Graphics II acts as a normal DEC-writer printer with enhanced capabilities. We can select any one of four character sets: standard, APL, mathematical, and user-defined. The first three sets are encoded in PROM, the fourth is stored in programmable memory. The fourth character set may be loaded from the host computer or entered manually from the keyboard; once loaded, it remains in memory until the DECwriter is turned off.

The programmable character set can contain up to 94 printable characters. Each of these is represented as a 7-by-7 dot matrix with the top dot corresponding to the most significant bit and the bottom dot to the least.

Seven bytes are required to define each character: one for each column of the matrix. For convenience in entering characters from the keyboard, each byte can be entered as an ASCII (American Standard Code for Information Interchange) character.

Using the boldface character option, we are able to emphasize words and headings, or even print out an entire document in this type style for a more pleasing appearance. Figure 1 shows the first three character sets and the various type styles available with the Graphics II enhanced DECwriter. The one-quarter-up and onequarter-down linefeed option is invaluable for printing the superscripts or subscripts that are often necessary when writing chemical or mathematical equations (see figure 1), as well as printing chemistry manuscripts, examinations, and writing computer-assisted instruction units.

## Data Buffer

The Graphics II unit also has a

1000-character buffer for serial I/O. In this mode, the printer will automatically print characters as fast as it can. Data not ready for printing will be temporarily stored in the buffer; however, the programmer must be careful not to overflow the buffer. To prevent this, an X-off character is sent to the host computer when the buffer is filled to within 100 bytes of overflow: an X-off character is then sent for every additional character received. When the buffer is emptied to fewer than 100 characters, an X-on character is transmitted. Thus, the programmer does not have to worry about overflowing the buffer or other timing considerations, and data transfer rates of up to 1200 bps (bits per second) are possible. The X-on/ X-off option need not be used if the programmer is careful to take into account the time needed to execute a carriage return and line feed, horizontal tab, vertical tab, graphic vectors, and Here Is, to avoid overflowing the buffer.

# How to maximize your Model III:

You don't have to settle for standard equipment. Let MTI and Alpha Byte help you build the Model III you want.

#### MTI FLOPPY DISK ADD-ON KITS

Now you can upgrade your I6K level II Model III to a full 48K Disk System the easy way with MTI's Double Density Disk Controller and your choice of Disk Drives. You can choose 40 track, Double-Sided 40 track or Double-Sided 80 track Drives to supply your disk storage needs. Forty Track Orives store 175K, Double-sided 40 Track drives store 350K. Four Double-Sided 80 Track Drives provide up to 3 MEGABYTES of On-Line storage

#### INTERNAL DISK DRIVE KITS

The first drive kit includs one Tandon Disk Drive, MTI Double Density Controller, Switching power supply, 32K of RAM, all mounting hardware, cables and Detailed Installation Instructions. The second internal drive kit includes a second drive and the necessary installation hardware.

40 TRACK DRIVE SYSTEM	
DRIVE NO 1 KIT	595 00
DRIVE NO 2 KIT	279 00
40 TRACK DUAL HEAD SYSTEM	
DRIVE NO 1	779 00
DRIVE NO 2	389 00
80 TRACK DUAL HEAD SYSTEM	
DRIVE NO 1	929 00
DRIVE NO 2	559.00

#### EXTERNAL DRIVE KITS

Two external drives can be attached to any dual drive Model (II Computer

40 TRACK EXTERNAL DRIVES	
DRIVE NO 3	379 00
DRIVE NO 4	359 00
DUAL HEAD 40 TRACK EXTERNAL DRIVES	
DRIVE NO 3	499.00
ORIVE NO 4	479 00
DUAL HEAD 80 TRACK EXTERNAL DRIVES	
ORIVE NO 3	679 00
DRIVE NO 4	659 00

#### **FIVE MEGABYTE EXTERNAL**

Add the Ullimate in Fast High Capacity Disk Storage to any Model III Floppy Disk system Reliable Winchester technology provides enough storage for the largest business files. Winchester disk drives have greatly increased data transfer rates and that means faster program and file loading. This is a complete self contained system that connects to a standard Model III Disk System in minutes without any modification to the com-

#### 

A complete diagnostic program for the Model III Tests RAM and ROM, video display and all disk drives. Catch problems while they're small and be sure that your Model III is in perfect running

#### MODEL III CP/M-80 NOW AVAILABLE! ... 849.00 CP/M™ & 80 Column Kit.

Now you can run proven CP/M based software on your Model III, with standard 80-column display. A simple internal modification will transform your Model III into a NEW computer and allow you to run CP/M the industry-standard operating system and assure you of a large supply of fine software. Includes CP/M 2.2

#### 

Now you can run your Model III at 4 MEGAHERTZ, that's almost double the standard speed. This simple-to-install kit does require some soldering.

#### MODEL III COOLING KIT

Heat build up is a major cause of system failures and 'flakey' operation. This kit provides excellent

#### DOSPLUS OPERATING SYSTEMS FOR THE MODEL III

#### THE GRAPHICS MODE

### **ACCUMULATOR** X2 **Y2 Y1**

GRAPHICS COMMANDS

- X2 TO X1, Y2 TO Y1, CLEAR ACCUMULATOR
- ACCUMULATOR TO X2, AND CLEAR
- ACCUMULATOR TO Y2, AND CLEAR
- DRAW LINE FROM X1,Y1 TO X2,Y2 POSITION PRINT HEAD TO X1,Y1

(2b)

EXAMPLES USING GRAPHICS COMMANDS

LOCAL = (800,200,(900,)(1000,150.)

BASIC - LPRINT (";STR\$(800);",";STR\$(200);".(";STR\$(300);",";STR\$(150); ")"

LOCAL - (900,500.(1000,450.)800,450.)800,550.)1006,556.)

Figure 2: Graphics-mode sample output. Figure 2a gives a summary of the graphics command procedures, as printed in the graphics mode. Figure 2b shows how straight lines are drawn.

#### Graphics Operation

The graphics mode is entered at any time with an ESC B and exited with a ESC C command. Graphics are done a page at a time, with each page consisting of 792 lines with 1320 dots per line. The origin (0,0) is located at the upper left-hand corner of the page; the bottommost right-hand corner corresponds to the point (1319,791).

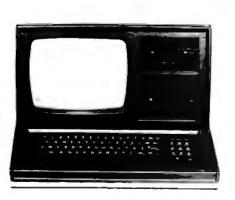

In the graphics mode, the system responds only to the digits 0 through 9, parentheses, the right bracket, the comma, and the period; all other characters are ignored.

The comma transfers the previously entered number from the accumulator to the X2 register and then clears the accumulator. A left parenthesis copies X2 into X1 and Y2 into Y1 and also clears the accumulator; a right parenthesis is the command for drawing a line between X1,Y1 and X2, Y2. This sequence of operations is summarized in figure 2a, Examples of lines drawn using these commands are shown in figure 2b. Also illustrated is a BASIC print statement that shows the method of drawing lines under program control. Note that a comma indicates that the number preceding it is an ordinate value and a period indicates that the preceding number represents an abscissa.

Thus, (A,B.(C,D.) will draw a line between A,B and C,D; (A,B,(C,) draws a horizontal line between A.B

METHODS, CHEM. 434/5 TNSTRUMENTAL

> ATETRUM: DAT

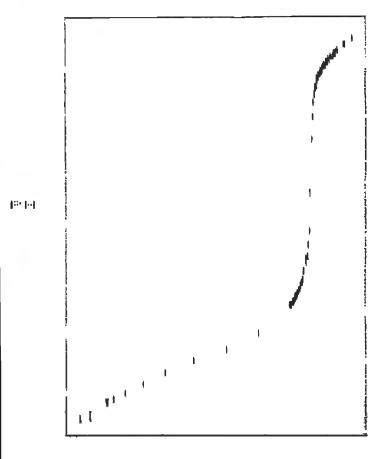

Figure 3: Typical acid/base titration curve. Data points are drawn as short bars, the curve is enclosed by a border, and the heading and labels are printed double width.

TURBUTUT

and C,B; (A,B.() prints a single dot; and the right bracket, as in A,B.(), positions the print head at location A,B without printing. Two examples are illustrated in figure 2b where, in the top example, a horizontal line is drawn between the points 800,200 and 900,200 and then a line from 900,200 to 1000,150. The intersecting lines in the bottom example are drawn in the same manner. First, a line is drawn between the points 900,500 and 1000,450; then a line between 900,500 and 800,450; a line between 900,500 and 800,550; and finally, a line between 900,500 and 1000,550.

COLUMB

#### The Use of Precision Tractors

AUDED

Another modification of the DECwriter, which is particularly useful in graphics mode, is the installation of a set of precision paper-feed tractors in place of the standard tractors supplied with a conventional DECwriter. (These can be obtained from the Selanar Corporation for \$50.) Their purpose is to insure that lines originating from the same point (such as in a radial pattern) begin at that point every time a new line is drawnotherwise the pattern shows a distinct discontinuity. The improvement in the printed results due to the use of the precision tractors can be seen in

In an age when new standards are constantly emerging, one disk consistently meets or exceeds them all.

## Maxell. The Gold Standard.

Not all disks are created equal. Some are better than others. To find out what's best for you, look for Maxell disks. They now carry the Gold Standard symbol of quality. It's your assurance Maxell disks meet or exceed every definition of quality. No matter who establishes it. We've earned this universal supe-

riority by never relaxing our uniquely demanding quality control. Every aspect of manufacturing is checked, then checked again.

Your benefits are many. Take the perpetual problem of drop-outs. A drop-out is a tiny defect that wastes time and degrades computer accuracy and performance. Now that you understand what a drop-out is, forget it. Maxell disks don't have any. Each disk comes to you certified

drop-out free at the time of manufacture. You can depend on this quality protecting your valuable programs and programming time, indefinitely. We've run disks over ten million passes under conditions designed to find weak points and wear. We couldn't. And you won't.

There is a Maxell disk for the floppy system you use, or plan to use. Check your computer's instructions. Or write for our complete, highly informative brochure.

When you set the Gold Standard as your level of quality, you'll benefit from improved disk performance, immediately. Bank on it.

maxell.

# ACCE EXERY

Why this operating system?
Ask the leading independent software vendors. They know Intel's iRMX 86 well enough to know it's an industry standard; that it allows them to plug into VLSI technology, and to design in

a heap of high-performance features.

Ask OEM's. They'll point out how it lets them tap a vast reservoir of massmarket application software. And how major software houses have already packed it with popular languages.

And both will tell you that iRMX 86's performance and cost advantages are flat out impressive. Which makes it a marvelous match for the industry's most widely used VLSI microcomputers—the iAPX

86 and iAPX 88.

IRMX 86 has two to

iRMX 86 has two to five times the multitasking talents of any other microcomputer operating system. So users can perform various chores simultaneously—with blazing, realtime system response. Thanks to ultrafast context switching, task synchronization and memory-based message passing.

And iRMX 86 even supports multiprocessing. Not only overseeing our 8087 numeric processor and 8089 I/O processor, but going even further. Often helping a whole team of 8086, 8088 microprocessors and 8087, 8089 processor extensions work together. While you're reaping the rewards of multiprocessing performance—without

having to wrestle with multiprocessing software.

Most importantly, iRMX 86 is the only

Company

Microsoft

Microfocus

Intel

Digital Research CBASIC

operating system taking full advantage of VLSI—already putting its advanced architectural virtues into silicon.

A prime example being our iAPX 80130 operating system processor. It squeezes timing tasks, interrupt processing and key functions of the iRMX 86 nucleus all onto a

chip. Marking the first major chapter in our commitment to bring operating software into silicon—so performance goes up as the

cost goes down..

And when it's time to tie into a communications network, you won't have to get tangled up writing complicated software: built-in software drivers are already in place. In fact, iRMX 86 is the only microcomputer operating system to support Ethernet," the de facto standard for local area networks.

Incidentally, all these features are available for \$130/unit in OEM quantities. Plus all are backed by extensive docu-

mentation, development tools, workshops, field support, software maintenance, and a company name that's liable to turn up anywhere.

Who knows, maybe

everywhere.

USE A 2-D ROTATIONAL ALGORITHM

#### **EXAMPLES**

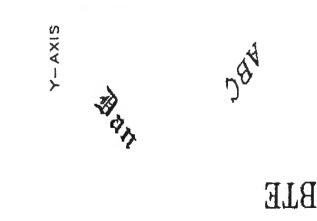

Figure 4: Various type fonts produced by the program of listing 1 from data stored on disk. The rotation feature is shown in figure 4b.

figure 2b, where the lines all originate from the point 900,500. The precision tractors are no trouble to install and otherwise perform exactly like the original tractors.

Figure 3 shows a typical acid/base titration curve. Note the use of the double-width characters to label the graph, the box enclosing the curve, and the use of the bar-print mode to emphasize the individual data points. This graph was generated with a FORTRAN program and is a good example of the combined use of printing characters and graphics. The four character sets, double-width, bold-face, and character rotation options all make the Selanar Graphics II board a powerful addition to any DECwriter.

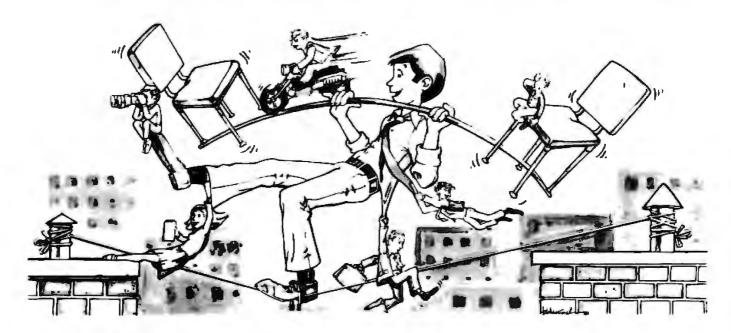

#### Generating Character Sets

The excellent resolution available with the Graphics II and the fact that it prints vector-generated graphics prompted us to explore the use of graphics to draw characters as well as plot curves. Normally, we would have to do this by developing tables of coordinates for each alphanumeric character. But fortunately, there is an invaluable reference work that provides all the information needed: A Contribution to Computer Typesetting Techniques: Tables of Coordinates from Hershey's Repertory of Occidental Type Fonts and Graphic Symbols. (Published by the U.S. Department of Commerce, the book is now out of print, although many libraries have a copy.)

This document lists the coordinates used to generate 1377 different alphabetic and graphic characters on either a video terminal or a hard-copy digital plotter. The tables were originally developed by Dr. A. V. Hershey of the Naval Weapons Laboratory in Dahlgren, Virginia. Dr. Hershey's assiduous digitization of these many character sets and symbols is as much a work of art as it is a scientific achievement, and it includes symbols from mathematics, engineering, music, and other disciplines. The typeset quality of the characters and symbols is certain to enhance any graphics display.

Figure 4a presents several examples

# RM/COBOLTM1 MAKES IT ACROSS!

...FROM ONE OPERATING SYSTEM TO ANOTHER! A VITAL WAY TO PROTECT YOUR SOFTWARE INVESTMENT FOR THE FUTURE!!

The RM/COBOL language runs on more different Operating Systems and more

different-sized computers than any other similar language. For starters, it runs on NCR and TI minicomputers and, in the micro field, on the CP/M², MP/M², CP/M86², MP/M-86², TRSDOS³, OASIS⁴, MOASIS⁴, and UNIX³, (ONYX version) Operating Systems... to mention only a few.

Until now, serious business software of the scope and flexibility seen in the minicomputer world has not been available on micros. **RA/COROL** now allows transfer of such software with a minimum of fuss.

We have participated in such a mini-to-micro transfer of a major set of general business software... using **RA/COSOL** as the transfer mechanism, of course. Running on literally thousands of minicomputers, these refined, enhanced, and proven software packages cover A/R, A/P, G/L, P/R, Order Entry (with Invoicing and Inventory Control) as well as Sales Analysis. The Packages define a new level of achievement for features and flexibility in micro applications software and offer top quality at a reasonable price.

For immediate information, call 714/848-1922 for your complete product descriptions.

# The important plus in matrix printers:

# grafixPLUS."

Since their introduction in mid-1980, the Anadex high-resolution DP-9500 Series matrix printers have set new standards for printer quality and performance. All models feature the rugged Anadex 9-wire print head that combines long life with resolutions of 72 dots/inch vertical and up to 75 dots/inch horizontal. With this kind of resolution, fineline graphics (under data source control) and razor sharp characters are pluses built into every printer.

#### Performance Plus

The full standard ASCII 96 character set, with descenders and underlining of all upper and lower case letters, is printed bi-directionally, with up to 5 crisp copies, at speeds up to 200 CPS. Models DP-9500 and DP-9501 offer 132/158/176 and 132/165/198/220 columns respectively. Print densities are switch- or data-source selectable from 10 to 16.7 characters/inch. All characters can be printed double-width under communications command.

#### Interface Plus

Standard in all models are the three ASCII compatible interfaces (Parallel, RS-232-C, and Current Loop). Also standard is a sophisticated communications interface to control Vertical Spacing, Form Length and Width, Skip-Over Perforation, Auto Line Feed, X-On/Off, and full point-to-point communications.

#### **Features Plus**

As standard, each model features forms width adjustment from 1.75 to 15.6 inches, shortest-distance sensing, full self-test, 700 character FIFO buffer (with an additional 2048 characters, optional), and a quick-change, 6 million character life ribbon.

#### **Quality Plus**

Beyond the built-in performance of the grafixPLUS series printers, the engineered-in quality and support are equally important. The result? Approval of both UL and FCC, Class A; operating noise levels under 65dbA; and a nationwide service organization second to none.

To see for yourself why the grafixPLUS printers offer more pluses for your printing dollar, contact us today.

# A Good-Buy Present.

Floppy Disk Controller, 64K of Memory, Serial & Parallel I/O Ports . . . all on a SINGLE S-100 BOARD!

Your business computer market has problems—expensive, power-hungry machines that are hard to expand and even harder to service. Advanced Micro Digital Corporation has the solution—SUPER/NET®, a TRULY single S-100 board computer that will seem like a dream to skeptical technicians and salesmen—not to mention your customers. SUPER/NET® is less expensive, less difficult to service and expand and requires less power than traditional four board S-100 systems; yet it contains all their popular reatures:

- IEEE S-100 Standard
- Z-80A™ CPU
- 64K Bank Select Memory
- Both 8" or 5¼" Floppy Disk Controller (WD 1793 chip)
- 2 Serial & 2 Parallel I/O Ports
- Real Time Clock Interrupts
- 2K Monitor EPROM
- Extended Addressing
- Runs with CP/M™, MP/M™ and CP/NET™
- One Year Warranty

Advanced Micro Digital
Corporation is dedicated to the
research and development of S100 computer technology. The
maintenance of superb quality in
our product line is our priority.

Now you can say "Good-Bye!" to all your old S-100 boards without giving up convenience and configurability, because now its all on a single S-100 computer board.

Circle 9 on Inquiry card.

Fill this space with a GRAFTRAX graphic and win a trip to Japan.

# The Epson "Softwear" Sweepstakes.

We're looking for the Picasso of programming. So we drew up an art contest for people who don't know a painting pallet from a PROM.

If you've got an Epson printer, a computer and a little imagination, you could win a week-long trip for two to Japan. Or our top-of-the-line 136-column MX-100 printer. Or his and hers Seiko Quartz Watches. Or a whole lot of honorable mention prizes. And you'll get a T-shirt with the winning graphic just for entering.

All you have to do is program a GRAFTRAX graphic—abstract, landscape, still life, whatever—using an Epson MX-70, MX-80, MX-80 F/T or MX-100 printer. We'll not only put it on our T-shirts, we'll be displaying the winning entries for all to see in June at the National Computer Conference in Houston.

Why, you may ask, are we being so generous? It's simply because GRAFTRAX is the most incredible graphics capability made for micros. And we want to see it used to its full potential.

All entries will be judged on originality, creativity and best use of computer equipment. They must be postmarked no later than May 1, 1982, and be accompanied by the software program, so we can recreate the winning entries for verification. Make sure the graphic is no larger than  $8" \times 10"$  and no smaller than  $4" \times 6"$ . And remember, if you digitize art or a photograph, it must have been originally created by you.

So get busy and enter. You might be a winner. And your software could be your "softwear."

### **EPSON** "SOFTWEAR" **SWEEPSTAKES**

- 1) Any computer equipment may be used to format the entry, but the graphics output must have been printed on an Epson MX-70, MX-80, MX-80 F/T or MX-10 printer with either built-in or optional CRAFTRAX. Winning entries will be recreated by Epson for verification.
- Each entry must be accompanied by the software program used to create it. All entries and software and the rights to use them become the property of Epson America, Inc.
- All entries must be at least 6"x 4" and no larger than 6"x 10"
- 4) Art or photographs, if used, must have been created by the
- 5) All entries will be judged by an independent panel of judges on their creative ment, originality and best use of com-puter equipment. Decision of the judges is final.
- This contest is valid from January 1, 1982 until May 1, 1982.
   Entries must be postmarked no later than May 1, 1982.
- 7) Participation in the Epson "Softwear" Sweepstakes is open to any except the following: employees of Epson America, Inc., its service agencies, or their families.
- 8) Winners will be notified by mail no later than June 1, 1982. A list of winners will be made available by sending a stamped, self-addressed envelope to Epson America, Inc., 3415 Kashiwa Street, Torrance, CA 90505.
- Entries will be maintained on file at Epson America, Inc. until January 1, 1983.
- until January 1, 1983.

  10) Prizes are as follows: First prize includes round-trip recommy air transportation for two to Tokyo, from the airport nearest the winner's place of residence, and six nights standard hotel accommodations, double occupancy. Trip does not include airport departure taxes, hotel service charges, cost of transportation or other expenses incurred before leaving the airport of initial departure, returning to Tokyo airport and returning home from the airport of initial departure; nor does it include meals or gratuities. Second prize consists of one Epson MX-100 Printer. Third prize consists of this and hers Seiko Quartz Watches. Additional prizes include 25 Micro-Nine Printheads, 50 Epson Digital Watches, and 100 Epson Ribton Cartridges.
- 11) You may enter more than once, but each entry must be accompanied by the official entry coupon below.

 	A second of	

12) Void where prohibited by law.

Text continued from page 186:

of Hershev-character alphabets. Starting from the top of the figure, these are: simplex Roman, simplex script, complex italic, triplex Roman, and Gothic English. At our laboratory, we now have the coordinates of these various character-printer sets stored on disk and can send them to the DECwriter under program control in any size desired. The coordinates for the simplex Roman characters occupy approximately 7K bytes of disk storage space, while the Gothic English files require more than four times that amount,

In addition to being able to vary the size of the displayed Hershey character sets, we also included in our program the ability to rotate characters to any angle. The effects of this routine, adapted from Mathematical Elements for Computer Graphics, by D. F. Rogers and J. A. Adams (see references), are shown in figure 4b, which displays several examples of character rotation; also shown is the rotational algorithm that does the calculations necessary for the individual rotations. The BASIC program that outputs the Hershey coordinates as letters, starting at any location on the page, with any magnification and any degree of rotation, is given in listing

Figure 5a is a three-dimensional plot of an exponential function showing the use of the graphics mode to display the lettering as well as the mathematical function itself. Figure 5b is a three-dimensional plot of the same function with certain lines hidden, with cross hatching, and labeled with graphically generated Hershey characters. Finally, shown in figure 5c is the three-dimensional representation of the quantum-mechanical wave function for a two-dimensional particle in a box.

#### Conclusion

The Selanar unit has been in operation in our laboratory for over a year and has performed flawlessly during that time. The illustrations of the various graphs shown, especially the three-dimensional plots, with or without hidden lines, coupled with the development of programs to encode and output the different Hershey character sets, has made our DECwriter a truly versatile and low-cost generator of high-quality, highresolution hard copy.

# WHILE OUR COMPETITORS TALK ABOUT PRINTER RELIABILITY,

### DATAROYAL PROVES IT.

Many printer companies talk about how reliable their products are. But very few can publish hard evidence supporting those claims.

Dataroyal knows that every printer breakdown, service call, or extra maintenance procedure increases the cost of owning and operating your system. So we don't make claims we can't prove.

Dataroyal tests our IPS-5000 printers non-stop at 100% duty cycle and page density. These printers have now surpassed an MTBF (mean time between failure) figure of 2000 hours-without failure, maintenance, or any special treatment. Under normal conditions, this performance rating means years of reliable operation between service calls.

And our printhead life now exceeds 500 million characters. All of this reliability spares you the time and expense you might now be spending on your existing printers.

This superior performance has made Dataroyal the intelligent choice for major domestic and international OEM systems manufacturers. Want to see our proof? Contact us, and we will send you our latest test results. And that's not just talk.

# Custom and Standardized Forms for the Microcomputer User

Philip Lemmons c/o BYTE Publications Inc. POB 372 Hancock, NH 03449

To help you find forms for your software, we are offering this brief account of the current marketplace of forms for microcomputer users.

Some microcomputer users have written their own software: others have bought one or more commercial programs. Many microcomputer users run both software of their own and commercial programs.

A number of companies stand ready to help you with various stock, custom, or standardized forms. Table 1 (page 200) lists companies active in this market. Table 2 (page 202) summarizes the product offerings of these companies and the minimum orders required for custom and standardized forms. I have also included brief information about these companies' offerings, if any, of continuous custom letterheads.

While stock forms are of several common types, they are not written specifically for one company's computer or software. Nevertheless, stock forms do, in fact, work with many commercial programs. Companies offering stock forms are too numerous to list. If stock forms will work with your commercial programs, or if you can write software that uses stock forms, you will be able to get the forms you need at an economical price. Some companies make the use of stock forms easier by providing programmer's guides for use of the form, e.g., a grid with rows and columns numbered and data fields highlighted.

But the focus of this article is on custom and standardized forms. Custom forms, of course, are designed to go with unique, userwritten software. What I am calling standardized forms are designed to go with specific pieces of commercial software. If you buy an accounting program from the fictitious Ersatz Software, for example, and you know someone who sells forms for the Ersatz programs, you won't need to spend any time adapting the software to your forms or spend any legwork looking for stock forms that happen to be compatible with the software.

#### **Custom Forms**

If you absolutely must do things your own way down to the last detail, custom-designed and printed forms are for you. Many companies produce custom forms. These companies are found under "Business Forms" in the Yellow Pages. Minimum order quantities vary greatly. The companies listed in table 2 that do custom forms accept orders for minimums ranging from 1000 to 5000. Pricing varies with the com-

# THE CENTRONICS 739. IT'S A LOT MORE THAN YOU'D EXPECT TO SELL FOR THE PRICE.

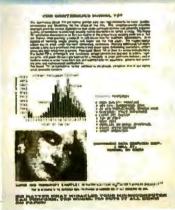

CENTRONICS 789

Inexpensive doesn't have to mean incomplete, and the quiet, dependable Centronics 739 is the classic example. It's complete in capability and because it's from Centronics you can expect it to perform just like the workhorse printers that have made Centronics a leader in the business for more than a dozen years. So when you shop for a desk-top printer and compare features, here's what you can expect from a 739:

CORRESPONDENCE QUALITY – Clear, high density characters plus right justification and proportional spacing that produce correspondence, direct mail, and other important documents that demand a "custom" quality appearance.

quality appearance.

BUSINESS GRAPHICS—
What good is a printer that can't print your technical business/
management information? The 739 produces a range of graphics—
from bar charts and curves to illustrative material—almost anything your computer can produce.

3-WAY PAPER
HANDLING — Cut sheets for
correspondence; roll paper for
day-to-day operations; fan-folded
forms for normal data printout.

DEPENDABILITY — You depend on your printer for hard copy of timely information and that means it must operate dependably. With Centronics reputation behind the 739, reliability is a foregone conclusion. More than 350,000 Centronics printers sold worldwide is the proof.

SERVICE – Someday you may need it. Where do you find it? With Centronics worldwide network of service locations it's not very far. And now, there are authorized Centronics sales and service dealers, and "walk-in" service centers in an expanding number of key cities throughout the U.S.

When it comes to printers,
Centronics is the leading
independent printer manufacturer—
chosen by computer professionals
in major industry brand preference
studies. So when you look for an
inexpensive printer don't settle
for incomplete. Choose the
Centronics 739. It comes complete
with a commitment—to
performance, dependability and
service. See it at your Centronics
dealer. Or write for information.

### CENTRONICS' PRINTERS

Circle 70 on inquiry card.

plexity of the form. Many companies stress that it makes little sense to buy only 1000 custom forms because 5000 cost relatively little more—much of the cost lies in the unique design of the form.

#### Standardized Forms

A few companies are now offering forms to go with standard, commercial software packages for microcomputers. NEBS, Checks-to-Go, DFS, Moore, and Trinity are all active in this market. Your choice of a company might depend on whether you want to buy forms by telephone or mail, from your local computer or software dealer, or (with Moore, at least) from the company's own local office.

More likely, however, your choice will depend on which company has the forms for your commercial programs. Table 3 (page 204) lists the kinds of software for which the companies shown sold forms. Note that not all these companies identify forms

the same way. Some companies list their standardized forms primarily by reference to software houses. Others refer primarily to computer companies: you tell them what kind of computer you use, and they tell you what forms they have for it. Some companies list standardized forms by a combination of software house and computer company. Since many computer companies sell software as well as hardware, you can't always be sure which forms company has exactly what you need.

Perhaps the wisest course is to contact all the companies or their local dealers and ask about your specific needs. Although table 3 lists the kinds of microcomputers and software for which various companies offer standardized forms, some of the companies have only recently entered the field. By the time you read this, the new entrants in the microcomputer forms market are likely to have added many new forms to their product lines.

Check-Mate POB 103 Randolph, MA 02368 (617) 963-7694

Comments: Check-Mate sells only by direct mail and telephone. Its custom forms are limited to checks; its standard computer forms are for Radio Shack and Libra software only.

Checks-to-Go 8384 Hercules St. La Mesa, CA 92041 (800) 854-2750 (800) 552-8817 (California residents only) Comments: Checks-to-Go sells only by direct mall and telephone. Tell Checks-to-Go what kind of computer you have and

DFS Computer Forms POB 643 Townsend, MA 01469

for your computer.

Comments: DFS has an extensive line of forms for existing microcomputer software and sells only through local dealers.

you will receive a sample kit of its forms

Moore Business Forms Inc.
1205 North Milwaukee Ave.
Glenview, IL 60025
(800) 447-4700
(800) 322-4400 (Illinois residents only)
Comments: Moore sells forms through
more than 600 of its own local sales offices around the United States. Check the
Yellow Pages or call Moore's toll-free
numbers to find out the name of your local
dealer.

NEBS Computer Forms 78 Hollis St. Groton, MA 01471 (800) 225-9550

(800) 922-8560 (Massachusetts residents

only)
Comments: NEBS sells only by direct mail and telephone. On request, NEBS sends a helpful, cross-indexed Forms Selector Guide and a catalog with programmer's guides for each form.

Trinity Forms Company
Micro Computer Forms Program
Carrollton, TX 75006
(800) 527-0625
(800) 492-5232 (Texas residents only)
Comments: Trinity sells through local dealers only, Contact Trinity on a toll-free number for the name of your local dealer.
Trinity plans to introduce a large line of standard forms for many different microcomputer software packages.

Table 1: Some companies selling standardized or custom forms for microcomputers.

# THE GRAPHIC EDIFFERENCE

BETWEEN ATARI® COMPUTERS AND ALL OTHERS.

3.7 million reasons why the ATARI Home Computer is something to see.

The display screen used with our computers is composed of 192 horizontal lines, each containing 320 dots. Delivering color and luminosity instructions to each dot for a second requires 3.7 million cycles...a lot of work for the normal 6502 processor.

That's why the ATARI computer has equipped its 6502 with its own electronic assistant. It's called ANTIC, and it handles all the display work, leaving the 6502 free to handle the rest. What this means to you is uncompromisingly spectacular display capabilities without loss of computer power needed to carry out the demands of your program.

That's a quality you just don't find in ordinary personal computers. And it's one of the reasons some computer experts say that ATARI computers are to first band of their time.

so far ahead of their time.

There's more...which is what you'd expect from ATARI.

Language. The ATARI Personal Computer uses several programming languages to give the user maximum control of its extraordinary capabilities. PILOT, Microsoft BASIC\* and ATARI BASIC are understood and spoken by the ATARI computer. You'll also find our Assembler Editor cartridge indispensable for machine language programming.

Sound. An ATARI computer has four sound generators, or voices, activated by a separate microchip. This leaves the principal microprocessor chips free to perform other tasks. And you can take full advantage of this capability which is designed for easy programming.

Change. ATARI Home Computers have been designed to make change and expansion easy. The ATARI computer has a modular operating system\* that can be easily replaced as new technology develops. If you need it, memory expansion requires no more than inserting additional RAM modules. And the ATARI ROM cartridge system also makes it easy to change languages. In short, your ATARI computer won't be obsoleted by future developments... beause it already incorporates the future.

Sharing. To learn more about the amazing capabilities of ATARI computers, visit your local computer store for a demonstration. Or send for our Technical User's Notes, intended for the serious programmer. They are only \$27 and contain a lot more information about our computers' special capabilities than most companies could tell. See your ATARI dealer, or send \$30 (\$27 plus \$3 postage and handling), payable to ATARI, to Technical User's Notes, c/o ATARI Customer Service, 1340 Bordeaux Avenue, Sunnyvale, CA 94086.

# Financial Planning... from SuperSoft SCRATCHPAD: SUPERSOFT'S

### **ELECTRONIC WORKSHEET**

ScratchPad is a user-interactive data modeling program suitable for financial planning or any general purpose modeling. Whether you are an executive, a researcher, or planning the family budget; you will find ScratchPad an invaluable tool in giving you the numeric correlations you need for sound decision making.

ScratchPad provides for labels and corresponding numeric data entries cross-referenced by row and column. Data entries are then defined as dependent variables in a user-created algebraic formula. You can now quickly see how changes in one or more variables affects all others.

JAM

ScratchPad includes the following

- Multiple screen splitting which allows two or more sections of the worksheet tobe viewed simultaneously.
- Both immediate and deferred calculation modes allowing calculations to be either made as data is entered or deferred until later.
- Flexibility in entry and editing functions so that data can be entered or changed easily.
  - Column widths are variable.
- Portions of the worksheet not currently being viewed can be quickly brought to the screen for either single or split screen viewing.
- Any portion of the worksheet can be printed as hardcopy at the user's discretion.

# DATA-VIEW: ORGANIZER

MAY

STATS-GRAPH: SUPERSOFT'S STATISTICAL **DISPLAY PACKAGE** 

Stats-graph performs statistical analyses on user data and displays the results in graphic form.

Graphic formats include:

- Pie Graph
- Bar Graph
- Scatter Graph

Statistical Analyses include:

- Mean
- Median
- Minimum and Maximum values
- Standard Deviation
- Regression Analysis

Stats-graph is an easy-to-run, userinteractive program that presents valuable and often complex information in a concise and easily understood form.

THE EXECUTIVE

Data-view is an easy-to-use, free formatted system for organizing information. It can be used as an electronic filing cabinet, an automated date book, or a computerized listing device. Insertion and retrieval of information is both simple and quick. Data may be retrieved by file, string, or key word, and any type of information can be stored.

\$200.00 ScratchPad: Stats-graph: \$200.00 \$200.00 Data-view: \$500.00 Total Package: \$ 15.00 Manuals only:

Software available for virtually all CP/M systems. Specify your system.

### **Hardware Review**

## Base 2 Printer

Walter leffries RFD<sub>1</sub> Readfield, ME 04355

Recently, after considering it for quite awhile, I added a printer to my system. My choice was the Base 2 printer, which I use with an Exidy Sorcerer with 32K bytes of RAM (random-access read/write memory). I bought the printer used for \$470, complete with most of its options (tractor feed, graphics option, and expanded character buffer). Parts of this article may not apply to Base 2 printers that lack these options.

#### Construction

This compact printer measures 7.5 by 24.5 by 35.6 cm (3 by 11 by 15 inches) and is constructed of aluminum, which makes the printer surprisingly heavy for its size. The aluminum chassis acts as a heat sink for the large-scale integrated (LSI) circuits, making a fan unnecessary if the printer has an unimpeded airflow. Designed around the 8085 microprocessor and other LSI chips, the printer has few components but great flexibility. Behind the tractor mechanism is a removable panel that provides access to two erasable programmable read-only memories (EPROMs).

One EPROM contains the printer's program and the standard character set, consisting of 96 ASCII characters. The other EPROM can contain auxiliary character sets; it does not come standard with the printer. The paper inlet is located in the bottom of the printer, and the friction

feed mechanism is located inside. In the upper left-hand corner of the printer's back panel is the power switch. Also on the back panel are the three interface connectors, power inlet, mode switches, and the reset/selftest switch. On the front panel are the formfeed (FF) and unit-select switches.

#### Interfaces

The Base 2 printer has three interface connectors that support four popular interfaces: RS-232, 20-milliampere (mA) current loop, Centronics parallel, and IEEE-488. You select the interface mode by using two switches of an eight-position miniature DIP (dual-inline package) switch located under the power switch. The next four switches set the default line length from any of five of the six line densities. The remaining two switches determine the "pinout" (lines assigned to the socket pins) for the serial interfaces. Also on the back panel is the data rate/unit-number switch, which consists of a 16-position thumb-wheel switch. In the serial mode this switch determines one of 15 data rates ranging from 75 to 9600 bits per second. In the IEEE-488 interface mode this switch acts as the unit-number switch. In the parallel mode this switch is not used.

An additional mode recommended for the TRS-80 uses the parallel interface and a line length of 80

#### At a Glance

Base 2 printer

Medium-quality printer

#### Manufacturer

Base 2 Inc. POB 3548 Fullerton, CA 92634 (714) 533-0111

#### **Dimensions**

7.5 by 24.5 by 35.6 cm (3 by 11 by 15 inches

#### Price

\$499

#### Hardware Needed

Host computer with one of four interfaces: RS-232, 20-mA current loop, Centronics parallel, IEEE-488

#### Software Needed

Appropriate driver for interface

#### **Hardware Options**

Tractor feed, paper holder, graphics option, expanded buffer

#### **Features**

Print speed: 100 cps bidirectional. Formfeed speed: 1.5 inches per second. Six character densities with elongated printing. Standard 96 ASCII characters in 5 by 7 dot-matrix font. Nine additional userdefined character fonts.

#### Documentation

74-page paperback

#### Audience

Computer hobbyist desiring a flexible. Inexpensive printer

# How to turn your HP-41 into a handheld computer.

# Introducing the Hewlett-Packard Interface Loop.

Starting today, your HP-41C or HP-41CV can be more than just a great little calculator. It's a great little computer, capable of controlling a quickly-expanding family of peripherals.

The new Hewlett-Packard Interface Loop (HP-IL) makes it all possible. HP-IL is an easy-to-use, low-cost interfacing system, specifically designed for batteryoperable devices.

The Interface Module and Peripherals.

At the heart of the system is the Interface Module, which plugs into any one of four HP-41 ports. You can control up to 30 peripherals, using only one port in your HP-41 calculator.

One of the key HP-IL peripherals is the new Digital Cassette

HP-IL Drive.

Drive. This batteryoperable device provides an

Circle 178 on inquiry card.

incredible 131,000 bytes of mass memory.

Another work-saving HP-IL peripheral is the new, batteryoperable Thermal Printer/ Plotter with enhanced

formating options and graphics.

This is just the beginning.

There are many more HP-IL products on the way. And they're all designed to provide the versatility and adaptability you expect from HP. You see, Hewlett-Packard is committed to a very big idea: small devices talking to each other, giving you big system capabilities – at small system prices!

For details and the address of your nearest dealer, CALL TOLL FREE: 800 547-3400, Dept. 276J, except Hawaii/Alaska. In Oregon, call 758-1010, or write Hewlett-Packard, Corvallis, OR 97330, Dept. 276J. TTY users (503) 758-5566.

Table 1: The control codes of the Base 2 printer.

characters, with automatic linefeed (LF) on receipt of a carriage return (CR).

Power Supply

My printer came wired for 110 volts of alternating current, but it can easily be rewired for 210 volts. Written directions and diagrams are in the operator's manual. Since the stepping motors are direct current (DC) and independent of the line frequency, the printer does not need to compensate for frequencies of 50 or 60 hertz (Hz).

# Chart your financial future with MicroFinesse

In this fast-paced business world, the best way to stay competitive is to chart your financial alternatives clearly and make decisions fast.

MicroFinesse is a complete planning package providing professional forecasting PLUS full high-resolution color graphics support, including pie charts, histograms and graphs, for the financial projections you create.

With this evolutionary resource planning tool you can consolidate or expand your financial models,

generate up to 15 user-defined reports per model, with visuals, all without bothersome reprogramming.

Previously available only for mainframe applications, MicroFinesse can now be pur-

chased for the 48K Apple II\* with the Apple Language Card.

So when your variables are many and your time is limited, take a good look at the financial artistry of MicroFinesse.

MicroFinesse\*

630 Bancroft Way, Berkeley, CA 94710, (415) 548-2805, Distributed by: OSBORNE/McGraw-Hill Apple II is a registered trademark of Apple Computer, Inc. MicroFinesse is a trademark of P-E Consulting Group Limited.

#### Manual Control

The Base 2 printer's front panel consists of a unit-select switch and a formfeed switch. When the unit-select switch is on, the formfeed switch causes the printer to eject paper to the top of the next form (default form length is 66 lines per page). When the switch is off, the formfeed switch causes the paper to advance at a rate of 1,5 inches per second.

In the upper right-hand corner of the printer's back panel is the reset/self-test switch. When toggled to the left, this switch resets the printer to its default mode. When the reset/self-test switch is toggled to the right, the printer prints a line of characters using the present mode. The self-test switch allows testing the printer independently of the host computer.

#### Software Control

Two sets of software controls have functions that overlap to a slight degree. One set consists of "control codes" (table 1); the other set consists of "function codes" (table 2). To take effect, the function codes must be prefixed by an ESC (ASCII 27). Some of the function codes must be followed by data, as when setting tabs.

The Base 2 printer supports six character densities (64, 72, 80, 96, 120, and 132 characters per line), as well as elongated characters (10 dots wide rather than 5) in all character densities.

The standard character set contains 96 ASCII characters in a 5 by 7 dot-

**Table 2:** The function codes of the Base 2 printer. All function codes must be preceded by an ASCII <ESC> (escape, hexadecimal 1B, decimal 27) in order to take effect.

# APPLICATION DEVELOPMENT WITHOUT PROGRAMMERS

### McGraw-Hill Bookstore

Are programmers available? Are they needed?

## APPLICATION DEVELOPMENT WITHOUT PROGRAMMERS

by James Martin, Prentice-Hall

With the wide range of software available and the great proliferation of computers, there may not be enough programmers to go around.

Here's how to put the computer to work without a programmer.

A wide range of methods is described. Each has its place; the ability to apply the right approach to each trade becomes an essential new DP skill. 320 pp

# DEALER DEMO SOFTWARE FOR 3<sup>‡</sup> ON THE DOLLAR

# Look at what you get for just \$295.

How can we afford to make available over \$9,000 worth of the finest software in the microcomputer industry for just \$295? Our answer is how can we afford not to?

We both know that professional demonstration is the best sales closer. It sells your computers and it sells our top quality software. That's why we'll send you all the business applications listed below for just \$295. You'll also receive important promotional materials and our exclusive video sales presentation designed to help you make the sale.

Just give us a call, or drop us a card and we'll send you the whole package for just 3¢ on the dollar . . . we'd like to lose less, but we can't afford to.

IN PA. CALL (717) 327-9575 501 E. THIRD ST., WILLIAMSPORT, PA 17701 matrix font. With software, you can define 96 other characters as an alternate character set. Up to eight other character sets can be contained in a 2732 EPROM, or four in a 2716 EPROM. A function code selects each of the 10 character sets. These extra character sets, especially the userdefined set, allow for special character sets, for example, APL characters, math symbols, and foreign alphabets.

The expanded buffer allows storage within the printer of a full screen (1920 characters). The buffer contents are printed either when the buffer is full or the print-buffer function code is received. The print on buffer full can be optionally disabled with a function code.

The graphics feature provides six horizontal densities up to 99 dots per inch and a constant vertical density of 72 dots per inch. Table 3 shows the character set in different densities. To use the graphics mode, you send the graphics-mode-enable function code followed by a full line of graphics data. The graphics data consist of bytes in which the lower 7 bits control the seven wires in the print head. The printer automatically prints the line of graphics upon receiving a full line of data. Since the printer does not linefeed automatically in the graphics mode, you must send an LF after each line of data. Figure 1 shows a printout of my name in script, produced by using the graphics mode.

#### Documentation

The documentation for the Base 2 printer is well done. It consists of a single 74-page Operator's Reference Manual that is divided into five sections plus appendixes. The sections cover installation, operation, internal specifications, and software control. Each control code and function code has a complete written description followed by a demonstration program in BASIC. The appendixes cover the hardware, providing full schematic diagrams and component layouts for the logic boards, as well as the parts lists.

#### Disaster and Recovery

After I wrote the first draft of this article, disaster struck at a most inconvenient time (couldn't Murphy have waited?). I had used my computer to write my term papers in school and had saved the papers on tape. When the time came to print the papers and pass them in, the printer blew a fuse. Okay, I thought, no problem. Just a fuse. Having noticed that the lights had flickered earlier. I thought it was probably just a power surge. I made sure that none of the mechanical parts had stuck, and then I inserted a new fuse. That blew immediately. My printer was not under warranty, Besides, I needed the printer now; I could not afford to wait six weeks for the company to fix it. Well, everything was not against me. With the help of the Operator's

## TAKE A TEST DRIVE.

Our drives feature excellent engineering, and all of the advanced performance features you've come to expect from the nation's leading disk drive manufacturers. All systems are completely burned-in and tested. And, you'll see at least five quality assurance stamps on each and every drive, which is how we make sure our drives will run and will continue to run past our optional two year extended warranty.

Our drive packages start at \$250.00 and include a comprehensive operations manual and an attractive static free, dust free cover.

Systems available for Altos, ¹Apple™, Atari, Heath™, North Star™, S-100, ²TRS-80™ (Model I. II. III, Color), Zenith™.

If one of our drives fails to meet your highest expectations of how trouble free and reliable a disk drive can be, then return it to us for a complete refund.\*

So, before you buy another drive, take a test drive with one of ours. We're sure that you'll find TRAXX to be the

finest. IT'S GUARANTEEDI

## Walter Vose

Figure 1: A printout produced using the Base 2 printer's graphics mode. The printer renders the author's name in script.

Reference Manual and a multimeter. I was able to determine that the diodes in one of the bridge rectifiers of the power supply had blown, creating a short circuit. The parts were standard; the night before my papers were due. I got the parts and fixed the printer.

This experience put quite a strain on my nerves, but it did teach me that the printer is quite simple to dismantle and repair.

#### Conclusions

The following conclusions can be made about the Base 2 printer. It is rugged and is backed up with a good manual listing all the parts and containing schematics and layouts.

The printer's format is very flexible and can be changed under software control or, to a lesser degree, by hand. It requires a driving program in the host computer to do the handshaking.

The printer can support as many as 10 character fonts: standard 96-character ASCII, user-defined, and eight more fonts, all in EPROM.

It accommodates four major interfaces: RS-232, 20-mA current loop, Centronics parallel, and IEEE-488. The printer provides high-resolution graphics.

The print rate is 100 characters per second, with bidirectional printing. Both hardware and software are well documented with many diagrams and examples.

## The Fill Forms System

## CP/M Programs to Cut Down on Paperwork

Bill Roch 24000 Bessemer St. Woodland Hills, CA 91367

We live in a paper-mill world with a form for just about everything. And someone has to fill out all those forms. A computer can make form handling easier because it can be programmed to do the complete job, but if there are many forms then you'll need many programs to fill out these forms—right? Wrong. You can do it with three programs.

The Fill Forms System is composed of three CP/M-based programs. The first, FFGRID-1, is used to determine the line and column position for each data field. The next, FFTABL-1, is used to build a control table that is used by the third program, FFORM-1, for data entry and forms

Editor's Note: Copies of these programs, on either 8-inch single-density CP/M disks or 51/4-inch single-density disks for North Star CP/M users complete with instruction manual can be obtained for \$20 from Elliam Associates, 24000 Bessemer St., Woodland Hills, CA 91367. Programs with the enhancements mentioned in the article are also available.

printing. These programs are relatively simple and, best of all, easy to use.

Form designers have been known to ignore the fact that typewriters and printers are generally unable to handle forms with unusual line spacing.

Each of these programs is written in Microsoft BASIC and is designed for use on a CP/M-based system (CP/M versions 1.4 through 2.2).

#### **Determining Field Positions**

The idea behind the system is to establish the line and column position for each data field to be printed on the form, then enter the data and print it in the proper position.

Field positions may be determined by measuring the number of lines in the form and finding the width by counting the spaces from the left side of the form (see figure 1). Once line position 1 and column position 1 are established as reference points, all other field locations can easily be determined—if you count correctly.

This method works fine for a form with a few fields, but when there are a number of fields, it is better to draw a grid on the form and then determine the field positions from the intersections of the horizontal and vertical lines of the grid.

#### Gridding the Form

The FFGRID-1 program is used to produce a grid on a form (see listing 1). The program prints a row of col-

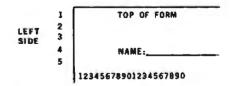

Figure 1: Each field position is determined by its particular reference points. The form is divided into numbered rows and columns. In this example, the data for the NAME field should be placed on line position 4 and start in column position 14,

Wild Hare Software Systems Multiply the Capabilities of Data General's

## RDOS INFOS® ICOS DOS

Wild Hare gives Data General users a choice when upgrading to a multi-user environment and eliminates the need to use AOS.
Wild Hare makes it easy for you. It creates a true multi-lingual, multi-user environment for your current system. No user software modifications are necessary. There is no need to install a new operating system. And, no expensive hardware upgrade is required.

#### **Features**

- · Each user is totally independent of all other users.
- · Each user may run all standard Data General software.
- Each user may independently edit, compile, execute and debug programs written in any language supported by RDOS, INFOS®, ICOS and DOS.
- Standard languages supported include: Fortran IV, Fortran V, COBOL, ALGOL, RPG, DG/L™, BASIC, PASCAL, MAC, etc.
- · All NOVA's® and ECLIPSE's® are supported.
- · Wild Hare guarantees its software systems on a money back basis.

Wild Hare's Software Gives Data General Users A Choice!

umn positions across the top of the form and on every tenth line. It also prints each line position on both edges of the form as well as horizontal and vertical grid lines. Since plus and minus characters are used, the grid intersections are at the center of a character rather than to the left and under it.

The program requires that you enter only the form size: the number of lines per page and the width in columns. After you position the form, the program prints an asterisk (\*) in line position 1 and column position 1. You can then reposition the form if necessary. Any number of attempts at repositioning may be tried, since

# NO COMPROMISE

#### No Compromise in Performance

- ☐ Operates in *any* S-100 System IEEE 696\* or not.
- Main-frame type memory mapping or 24-BIT extended addressing.
- ☐ DMA operation fully supported\*
- □ 8/16 data transfer protocol\*
- □ Up to 6 MHZ with no wait states;
   □ Up to 10 MHZ with automatic wait state assertion
- ☐ Parity error detection\*

## No Compromise in Features

- ☐ Easy overall characterization☐ No timing characterization
- No timing characterization required: optimal refresh mode selection.

#### **No Compromise in Quality**

- ☐ Multilayer board and bus signal filtering for noise-free operation
- Highest quality tested components
- ☐ Highest standard workmanship
- ☐ Thorough, rigid 100% final test and burn-in

#### No Compromise in Customer Support

- ☐ Comprehensive technical manual
- ☐ User hot-line
- ☐ Full one year parts and labor warranty

#### N

"In accordance with IEEE 696 S-100 Standard

#### **APPLESCOPE**

DIGITAL STORAGE OSCILLOSCOPE Interlace for the Apple II Computer

The APPLESCOPE system combines two high speed analog to digital converters and a digital control board with the high resolution graphics capabilities of the Apple It computer to create a digital storage oscilloscope. Signal trace parameters are entered through the keyboard to operational software provided in PROM on the Disported board.

 DC to 3.5 Mhz sample rate with 1024 byte buffer memory

Pretrigger Viewing

Programmable Scale Select

Continuous and Bingle Sweep Modes

. Single or Dual Channel Trace

Price for the two board Applescope system is \$595 EXTERNAL TRIGGER ADDAPTER \$29

#### APPLESCOPE ACCESSORIES

APPLESCOPE-HR12 High resolution 12 bit analog to digital converter with sample rates to 100 Khz. Requires 48K Apple It with disk drive. Software provide on lioppy disk includes basic SCOPE DRIVER package.

Price per channel \$695

APPLESCOPE-HRHS High Resolution AND High Speed. Circuit combines two 6 bit flash analog to digital conveners to give a 10 bit dynamic range. The 10 bit converter resolution is maintained at sampling rates up to the 7 Mhz. maximum for signal siew rates less than .5 volts per microsecond. Larger inputs siew rates with reduce the converter resolution to 6 bits until the signal stabilizes within the .5 Volt per microsecond limit. Requires 48K Appleti with disk drive. Sollware provided on disk includes the basic SCOPE DRIVER package.

APPLESCOPE-EXT External trigger adapter has a switch selectable external trigger input to a BNC connector mounted in a rear slot of the Apple II computer Price \$29.00

APPLESCOPE-BNC BNC adapter connects the Berg stick connectors on the A1 circuit card to mate BNC plugs mounted in a rear stol of the Apple It compter

Price \$14.95

BUS EXTENDERS Allow easy access to Apple II peripheral Groull cards Price \$19.95

SCOPE PROBES Oscilloscope probes for use with the APPLESCOPE BNC adapter Price\$29.85

SCOPE DRIVER Advanced software for the Applescope system provided on 5<sup>th</sup> lipppy disk. Available options include:

 Signal Averaging Acquires 1 to 255 signal sweeps and displays the averaged result

 Digital Voll Meter: Attows use as a real time DVM or use to measure points on an acquired sweep

 Hard Copy - Uses graphics printer to produce hardcopy output of displayed traces.

 Disk Storage - Allows automatic storage and recover of acquired data on lloppy disks

Spectrum Analyzer - Calculates and displays requency spectrum of acounted data

#### BUS RIDER LOGIC ANALYZER for the APPLE II

The BUS RIDER circuit card silently rides the Apple It peripheral bus and allows real time tracking of program flow Software provided on EPROM allows set up of trace parameters from the keyboard and read back of disassumbled code after a program has been tracked

• 32 Lit by 1024 sample memory buller

Monitors Data and Address bus plus 8 external inputs

Ingger on any 32 full word or external trigger
 Professor any 32 full word or external trigger

Prethgger wewing

V(52

The BUS RIDER is an invaluable development tool for anyone working with Apple II or Apple (I i computers Price **5295**

## 5-100 STATIC MEMORY BREAKTHROUGH

### 16K STATIC RAM \$169

### 64K STATIC RAM \$795

32K PARTIALLY POPULATED \$479 48K PARTIALLY POPULATED \$659

Finally, you can buy state-of-the-art S-100 static memory for your computer at unprecedented savings.

Memory Merchant's memory boards provide the advanced features, quality and reliability you need for the kind of operational performance demanded by new high-speed processors.

#### COMPLETELY ASSEMBLED

These memory boards are not kits, nor skeletons—but top quality, high performance memories that are shipped to you completely assembled, burned-in, socketed, tested and insured with one of the industry's best warranties.

#### SUPERIOR DESIGN & QUALITY

Memory Merchant's boards are created by a designer, well-known for his proven ability in advanced, cost-efficient memory design. Innovative circuitry provides you with highly desired features and incredible versatility.

Only first quality components are used throughout, and each board is rigorously tested to assure perfect and dependable performance.

## SHIPPED DIRECT FROM STOCK

All Memory Merchant's boards are shipped direct from stock, normally within 48 hours of receipt of your order.

#### **NO RISK TRIAL**

We are so convinced that you will be absolutely delighted with our boards that we extend a no risk trial offer. After purchasing one of our boards, you may return it (intact) for any reason within 15 days after shipment and we will refund the purchase price.

## NEW 18 MONTH LIMITED WARRANTY!

The reliability of our boards, through quality controlled production and proven performance, has enabled us to extend our warranty to a full 18 months. This includes a 6 month exchange program for defective units.

#### **HOW TO ORDER**

Please send check, money order, VISA or MASTERCHARGE (add ICA#) with your order. Sorry, no C.O.D.'s. Specify model number, and quantity desired. Shipping and handling charge is \$5.00 per board. California residents add 6% Sales Tax. Credit card purchases may be telephoned to (415) 483-1008.

**OEM** and **DEALER** inquiries invited.

14666 Doolittle Drive San Leandro, CA 94577 (415) 483-1008

#### 64K RAM, Model MM65K16S

Cool running operation to 10 MHz
Ultra low-power consumption
Fully loaded 64K board draws:
Typ. 350 Ma. (Max. current 550 Ma.)
Bank Select Capability
Extended Addressing Capability
One 16K submodule equipped with a
2K window which may be located

2716 (5V) EPROM Compatibility: Programmed 2716 EPROM's may replace any or all of the RAM

in any of the 2K segments

Four independently addressable 16K submodules on one board organized as two pair of independent 32K banks or as one 64K Extended Address Page. Each 32K bank responds independently to phantom. Bank Select logic is compatible with either Cromemco Cromix\* or standard Bank Select software.

New 16K (2K X 8) 150ns Static RAM Runs on any S-100, 8-bit system MPM Conversion Option: Write for details.

#### 16K RAM. Model MM16K14

Bank Select Capability
Extended Addressing Capability
One 4K segment equipped with 1K
windows

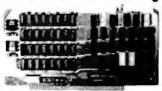

Four independent 4K X 8 byte segments

Uses field proven 2114 (1K X 4) Low-power consumption (Typ. 1.3 Amps) Runs on any S-100 8080, 4 MHz Z-80 or 5 MHz 8085 system.

Prices, terms, specifications subject to change without notice.

Circle 233 on inquiry card.

#### S-100 Boards from S. C. Digital

#### 64K DYNAMIC RAM 'Uniselect: 2'

features: Model 64KUS

18 or 24 bit addressing 8 8 bit data. 8 Bank Select by SW settable Port, Bits in Twe blocks. Two 32KB (or 126KB) addressing. Transparent refresh with delay lines, giving unlimited DMA, immune to Weit States, halts, resets. Fast access time - 220nsec from Smann or Psync high, will run with 280, 28000 to 4mhz, 8080, 8085, 8088, 8086 to 5mhz without wait states.

#### 32K Static Ram 'Unisalect: 3'

features: Model 32KUS

Fully Static using 2k by 8 NMOS chips. • 18 or 24 bit address. • B/18 bit wide data. • Bank Select by port and bit in 32K block. • Two 16K block addressing with window capability in 2k increments. • EPROM can be mixed with RAM. • Fast access - 25Onsec from address valid -will run with 280. 28000 to 4 4mfz. 8080, 8085, 8088, 8086 or 88000 to 8 8mhz without Wait States. • Provision for Battery Backup using NMOS or CMOS

#### 1/0, Memory Interface 'Interface: 1'

features: Model 3SPC

3 Serials using UART, RS-232C or 20ma current loop.

1 Parallel I/O with hand shakes.

4 Ram, 4k EPROM (not supplied)

Built in Kansas City Audio Cassette interface.

Baud rate generator from 18.2kbaud to 110 baud.

#### 2K Z80 Monitor Program

evailable for M:3SPC

feetures: many routines including breaker points, cassette record and play back . . etc. Comes in 2 EPROMs and 1K RAM.

Z80 CPU Board Model CPUI-Z80 feetures: © 2 or 4mhz clock. © Jump on Reset © 2K of EPROM (not supplied). © 8 levels of prioritized vectored interments.

#### 16K Static Ram 'Uniselect: 1'

features: Model 16KUS

■ Futly static using 2114L-2, 200nsec chips. ■ Bank Select by port and bit. ■ 8 bit date, 16 bit address.

All boards conform to IEEE896/S100 specifications, fully socketed, screened legenda, masks, Gold contacts. Guaranteed One Full year.

# MAGNE I.

The Grappler™ is the most intelligent Apple interface available. Simple commands from the keyboard or user program, are all you need to dump screen graphics to your printer. The Grappler's exclusive EPROM chip makes high resolution graphics that easy. There are Grappler versions to accommodate the Anadex, Epson Series,\* IDS Paper Tigers, Centronics 739. NEC 8023, C. Itoh Pro-writer, Okidata 82A, Malibu 200, and future graphic printers.

\*Requires Graphics Upgrade,

For information contact: CompuCable Corporation (714) 635 7330 High Technology (314) 838 6502 **Kal Tronics** (312) 291 1220 **Micro Distributors**

#### **MMSFORTH VERSION 2.0:** MORE FOR YOUR RADIO SHACK TRS-80 MODEL I OR MODEL III!

\* MORE SPEED
whose teater than Layer II BASIC.

MORE ROOM

MORE MOOMS Very compact compiled code plus VIRTUAL MEMORY makes your RAM act larger. Variable number of block buffers, 31-cher-unique word names use only 4 bytes in header!

MORE INSTRUCTIONS
Add YOUR commands to its 79-STANDARD plus instruction set!
Fair more complete than most Forths: single A iction set! nore complete than most Forths; single & is pracision, arrays, string-handling, clock,

+ MORE FASE

MORE EASE
Excellent full-screen Editor, ptructured &
modular programming
Word search utility
THE NOTEPAD letter writer
Optimized for your T85-80 with keyboard
repeats, upperflower case display driver, but
ASCII, single-8 double-width prachice, atc

MORE POWER

MODRE POWER Forth operating system inserpreter AND compiler 3660 Assembler (250 Assembler also evallable) intermix 35 to 80-frack disk drives Model III System can read, write & run Model i aftee! TUAL NO for video and printer, disk and lape Magabyte hard disk avaliable;

the program issues only a carriage return and waits for a response. If your printer includes a line feed, you will have to crank the form back one line before repositioning. When the form is aligned satisfactorily, the program prints the grid on the form. Figure 2 shows a sample standard purchase-order form that has been gridded with the FFGRID-1 program.

IF AS <> "Y" GOTO BLOD ELSE GOTO TOKO

#### Building a Forms-Control Table

Using the gridded form, you can determine the line and column posi-

tions to be used in building a control table (see listing 2). At the same time, the maximum length for each field can be specified.

Listing 3 shows the control table created with the FFTABL-1 program for the purchase-order form. This control-table file will also be used by the FFORM-1 program to display the field names for data entry, determine the maximum field length, and provide the line and column position for each data field.

FFTABL-1, like the other programs, scrolls up from the bottom of the screen, so no cursor positioning is required.

When the FFTABL-1 program comes up in the command mode, you are given the choice of building a new control table, updating or changing an existing control table, listing an existing control table to the screen or printer, or ending the program and writing out the control table to disk. The program always returns to the command mode after each mode is finished.

Build Mode: When the Build mode is entered, a column heading is displayed with item number 1 on the next line. After each entry is made, the item number is incremented by one. An entry consists of the line number, the column position, the maximum field length, and a field name (see figure 3). The field name is displayed by the FFORM-1 program for data entry. Commas are required as delimiters between fields.

While in the Build mode you may reenter the previous field by entering a < or go back to any previously entered item by entering < N, where N is the item number. The program issues an error message if N is less than 1 or greater than the largest item

number. The Build Mode is terminated by entering the word END.

List Mode: After the Build mode is ended, you may list the control table on the screen or print the table. The program lists 18 lines on the screen and then requests a carriage return before listing the next 18 lines. If printed, the program takes care of column headings for a 66-line page. A previously prepared control table can also be read and listed.

Update Mode: In the Update mode you can:

 Insert: Enter the code IN, with N being the item number of the record to be inserted. If I9 is used, item 9 will be renumbered to 10, 10 will be moved to 11, etc. The inserted record becomes item 9. All previous records are moved up to make room for the insertion. Item numbers greater than N will be incremented. To append records to the end of the file use I to insert an item number greater than the highest item number in the file or return to the Command mode and use the Build mode.

- Replace: The entry of RN will allow a new entry for item N. This entry replaces the existing record with the new record.
- Delete: DN causes item N to be deleted. All records will be moved down. Item numbers greater than the N used will be decremented.
- List: The list commands allow you to L all items, L# a single item, or L#-# a range of items (# is the number of an item).
- End: END terminates the Update mode and returns the program to the Command mode.

#### Valid Entries

The fields that make up a record are entered as a string, then broken up into individual fields. This allows use of < and END, which would never work in BASIC if the line-number field was a numeric field. The program edits each record to make sure it is valid by

- Checking for commas as delimiters between fields
- Checking for line or column positions less than 1
- Checking to make sure that line numbers increment (for example, you cannot insert line number 20 ahead of line number 15)
- Checking to make sure that fields on a line do not overlap (a field starting in column position 20 that is 20 characters long cannot be followed by a field starting in column 30)
- Issuing error messages when the record is not valid and displaying the same item number again for a correct entry

Once a control table is built, it can be changed by running the control-

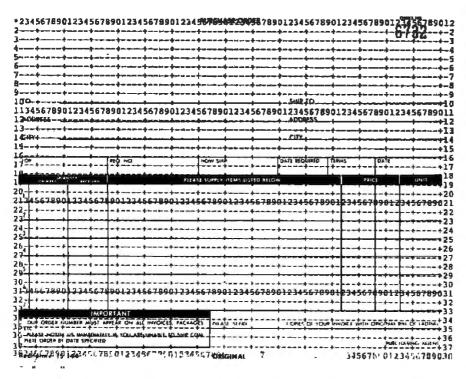

Figure 2: The FFGRID-1 program prints a grid over your form that allows you to determine the coordinates for the various data fields.

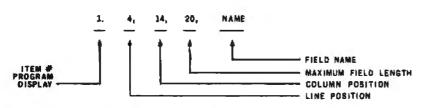

Figure 3: In the Build mode, the FFTABL-1 program prompts you to enter the data for each field.

A GALAXY of features makes the LNW80 a remarkable computer. As you explore the LNW80, you will find the most complete, powerful, ready to run, feature-packed personal and business computer ever made into one compact solid unit.

MODEL I COMPATIBILITY - The LNW80 is fully hardware and software compatible with the Model I. Select from a universe of hardware accessories and software - from VisiCalc" to space games, your LNW80 will launch you into a new world of computing.

FULLY LOADED - A full payload includes an on-board single and double density disk controller for 5 %" and 8" single or double sided disk drives. RS232C communications port, cassette and parallel printer interfaces are standard features and ready to go. All memory is fully installed - 48K RAM, 16K graphics RAM and 12K ROM complete with Microsoft BASIC.

QUALITY CONSTRUCTION - Instrumentation quality construction sets LNW80 computers apart from all the rest. Integrated into the sleek solid steel case of the LNW80 is a professional 74-key expanded keyboard that includes a twelve key numeric keypad.

HIGH RESOLUTION GRAPHICS & COLOR— The stunning 480 X 192 resolution gives you total display control—in color or black and white. The choice of display formats is yours; 80, 64, 40 and 32 columns by 24 or 16 lines in any combination of eight colors.

PERFORMANCE – Lift-off with a 4MHz Z80A CPU for twice the performance. The LNW80 outperforms all computers in its class.

Our down to earth price won't send you into orbit

table file through the FFTBAL-1 program. Use the Update mode to insert, delete, or replace the line and column positions that need adjusting so that the data fields will fit properly on the form.

#### Filling in a Form

After building a control table, the FFORM-1 program is used to enter the data to be printed on the form (see listing 4). When the program is loaded it goes into the Command mode and gives you the following options:

- Build: Build new data arrays; these may be printed or written to disk.
- Change: Change the data in the data array or data file (fix errors).
- List: List the data-array file, showing the line and column position and data for each field. The listing may be displayed or sent to the printer. You can specify that the whole file, a single field, or a range of fields be listed.
- Print: Print out the form on the printer or display the data on the screen as it would look on the form.

While in the Command mode, the FFORM-1 program functions the same as the other two programs. User options include:

Build: The control table that provides the line and column positions and field names is first read into an array. The program then displays the first field number and field name, together with underscores corresponding to the maximum field length. You enter the data for that field and hit the carriage return. The program will display the field number and field name for the second field. For blank fields, a carriage return is entered. The use of the < and <N for reentering data is the same as in the FFTBL-1 program. If you want to stop before reaching the end of the table, enter < END to go back to the Command mode.

Form designers have been known to ignore the fact that typewriters and printers are generally unable to han-

# Look What Apparat has for your IBM Personal Computer.

Apparati announces our initial line of add-on

boards for your IBM Personal Computer. We are committed to further product introductions to enable you to build on your new IBM system.

Add Functionally and Capability with

These New P.C. Boards
Apparat has the following products
available for delivery in the first quarter

Prom Biaster will program most 1K to 4K byte EPROMS of 25XX and 27XX single or multivoltage type. Complete with personality modules and read/write software. Priced at \$149.00. Clock Calendar features seconds, minutes, hours, day of week, date,

month and year. Backup batter leap year and crystal time base. Priced at \$129.00. Protype Card 3.5 by 8 inches wirewrap area holds over 150-14 Pin Dips. Priced at \$29.95.

RGB Color Monitors choose from NEC, AMDEK and TECO CRTs, Priced at \$1.095.00 for the NEC and \$999.00 for AMDEK. TECO available in April 1982.

More Products Coming Soon
Apparat has more products for your IBM system in production and ready for introduction in the second quarter 1982: 3rd and 4th add-on disk drives expansion cabinet houses up to two IBM compatible drives. Priced at \$499.00 for cabinet and one 160K drive, two drives at

Combo Cards parallel printer, ASYNC

communication (RS-232), and clock calendar multipurpose adapter.

64K byte hardware
print-spooler — (with parallel printer
adapter) buffers 13 minutes of print
output (at 80 characters/second).
500 Baud Modem Card with ASYNC serial
adapter

Apparat will continue developing add-on products to support your IBM Personal Computer. Call today to find out more information about the above products or to order yours. Dealer inquiries welcome.

## **What's Better** Than Basic?

Delphic Systems has merged its Z80 BASIC with FairCom's MICRO B+TM to produce BASIC B+TM, the first all purpose interpreter featuring a B-TREE file structure implemented using NEW commands. No more messy CALLs or difficult assembly language interfacing! Instead, use the following BASIC B+™ functions to manage an index without ever reorganizing the file:

BOPEN BCLOSE **NEWB** FINDB KILLB GETB **NEXB** PREVB

In addition, BASIC B+TM was written using Z80 code in order to minimize size and enhance speed performance.

#### Features & Requirements

- Search a 10,000 entry index in one second
- No index reorganization needed
- Uses fast and compact Z80 code
- CP/M® Versions 1.4 or 2.2
- 12 Digit precision
- Program Chalning
- Read only file protection
- Sequential and random files

with documentation \$325.00

**Delphic Systems** 2260 Compton Avenue St. Louis, MO 63104 314/773-6753

Coming Next INVENTORY B+TM

MasterCaro MICRO 8 + TM is a Trademark of FairCom

# LET'S TALK EPROM PROGRAMMING PROGRAMMING AND THE 5-100 BUSI

You say your eprom programming needs are varied, but your engineering budget doesn't permit the purchase of that \$5,000-\$7,000 standalone programmer?

#### a.d.s. has the solution! Hardware

The ads Prom Blaster eprom programming card sits on the I.E.E.E. 696/S-100 bus as an I/O device.

### Does not require memory locations!

Handles the following devices: 2708's thru 2764's, single and three supply parts, and the Hitachi 48016 eeproml Device plugs into on-board LIF socket.

#### Software

Runs under CP/m\* or adsmon MC6809 monitor. Price: \$299,00 A & T + shipping. Includes board & software.

### For complete details contact:

ackerman

dle forms with unusual line spacing. If the form has unusual line spacing, the print program can be stopped so the form can be realigned: just enter <STOP for the field name and the program will stop on the selected line at the selected column. Reposition Form will be displayed on the screen.

Once back in the Command mode the data can be changed, listed, written to disk, displayed on the screen, or sent to the printer.

Change: If the change command is used when the program starts up, you will be requested to enter the file name for a previously saved data file and control table. If you enter C while using the FFORM-1 program, it will request the field number to change. If you enter CN, the program will display the current data for field N. You can then change the data for that field and the program will be ready for the next command.

List: The list command, like the change command, can be used with a

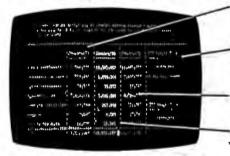

## **BREAKTHROUGH!**

View and edit many files simultaneously.

Draw diagrams as easily as typing text.

Cut text from one window and paste it into another.

Horizontal and Vertical scrolling.
Create your own commands for your applications.
Automatic memory management of large files.

Compare, contrast, review or analyze.

Automatic

#### A MULTI-WINDOW TEXT EDITOR FOR UNDER \$200.

Imagine this kind of productivity: Your 4 favorite files right before your eyes on the screen of your CRT.

Divide the screen of your CRT into any combination of horizontal and vertical windows, each with its own workspace. Or, windows can share a workspace—so you can edit different parts of the same file.

You get true on-screen editing, plus the ability to add or delete any of 10 windows, at any time, anywhere on the screen.

Using CP/M compatible files and simple, easy to remember commands, THE ELECTRIC BLACKBOARD™ has functions to satisfy the needs of the most demanding professional computer eclentist. Yet THE ELECTRIC BLACKBOARD™ can be used just as productivly by the novice within minutes. A step-by-step Learning Guide,

designed for the novice, will guide you gently through the learning process.

Unleash the extraordinary power and flexibility of THE ELECTRIC BLACKBOARD<sup>®</sup> on your Z80-based microcomputer today.

Requires 48k CP/M or CDOS, Z80 processor, and CRT with cursor addressing. Distributed on SSSD 8" diskette, includes reference manual, learning guide, and quick reference card. Price: \$198, manuals only: \$30.

## Word processing that goes beyond the stars.

M ow could anyone call their word processor The FinalWord? Take the best features of the most popular word processors, combine them and add a few more in one text editor/ The formatter and you'd be off to a good start. Then, write the program in C to allow user customization and make it capable of supporting any printer on the market and you'd be ahead of everybody else. If you went one step further and made your word

processor transportable from one terminal to another you'd have—The FinalWord.

Supports multiple printers: The FinalWord allows you to produce high-speed draft copies on one printer, and letter-quality on another. It also means you'll never need another version just because you bought a new printer.

#### User-installable on different hardware:

With The FinalWord you can upgrade your system and still have a familiar screen display. And since we've written The FinalWord in C, new versions are available almost as soon as new computers.

Features that go beyond the stars: Look at what you get with The FinalWord: automatic generation of Table of Contents, Index, footnoting and chapter/section numbering; enhanced command sets (delete/move a letter, word, sentence, paragraph, page); multiple buffers and windows, deletion recovery, true proportional spacing and more. And because we wrote The FinalWord to be easily reconfigured for different systems, our price can be lower.

Features	The FinalWord	WordStar	Magic Wand
Full-Screen Editing	Yes	Yes	Yes
Directory Access while Editing	Yes	Yes	Yes
Simultaneous Printing while Editin	g Yes	Yes	Yes
External Commands while Editing	Yes	Yes	No

Supports Multiple Printers	Yes	No	No
Crash Recovery	Yes	No	No
Dynamic Include Files	Yes	No	Yes
Suggested Retail Price	\$300	\$495	\$395

The FinalWord requires a 56K CP/M system and video terminal with cursor positioning character sequences. It is presently available in 8" standard format for the TRS-80 Model II, Vector Graphics and Altos Systems. There are compatible versions for the HP-125, Xerox 820, Cromemco, Micropolis, Ohio Scientific and Dynabyte Systems, and there are 5\%" versions for the Heath/Zenith Z-89, Northstar, Apple and Superbrain. Coming Soon:

The FinalWord for the IBM Personal Computer.

The FinalWord is available through leading retailers, Westico, and Discount Software. or directly from:

Mark of the Unicorn PO BOX 423 Arlington, Massachusetts 02174 (617) 489-1387

data file or used to list the fields just completed. All the fields may be listed by entering L; a single field can be listed using LN; a range of fields can be listed using LN-N, where N is the field number (see listing 5 for a sample data file).

The listing of the sample data file created with the FFORM-1 program contains the item number, line position, column position, and data to be printed at that location.

Print: The print command allows you to display either the array data (created by FFORM-1) or field data. formatted as it would look on the form, or the field data can be used to fill in the form on the printer.

When a printout of a form is requested, the program first asks you to position the form, then prints the first field and allows you to reposition the form. It can then print the next field and stop for forms alignment check, print the rest of the form, or quit. If a data field contains <STOP, the program will stop to allow you to reposition the form, Figure 4 shows the completed purchase order that was printed using sample data fields.

Saving the Data: In the Command

mode, the program can be ended by entering E. You then have the option of writing the data arrays to a disk file for future use or rerunning the program.

Depending upon your needs, you can add a number of enhancements to

These programs work best when there is constant use of a standard form, such as insurance forms, applications, or government paperwork.

these programs that will make them easier to use, for example:

- Multiple page forms with more than 100 data fields
- Command letters in either uppercase or lowercase
- Left- or right-justified data fields
- String or numeric fields
- An alert to any entry-required fields
- Print constants from the control table

- Special editing and range checking
- Use of the INP statement instead of INPUT to eliminate the need of the carriage return for completely filled fields
- Making a mask that looks similar to the form to be filled in and placing it over the screen—then filling in the data in the mask fields (this enhancement requires the use of a display that has an addressable cursor)

Most of these enhancements could be implemented by expanding the number of fields in the control table. then adding more code to support them.

#### Summary

The Fill Forms System is a relatively simple set of programs that can be used in a wide variety of situations. They work particularly well in situations where a standard form is required—for insurance agencies, application forms, or government documents. The more complex the form and the more frequently it is used, the more time you'll save by using this system.

## **Invest in an M System**

"Okay, which entry-level, singleuser microcomputer should I own?" The BOS M System.

"Which multi-user system should I own?"

The BOS M System.

"If I want a larger system with the ultimate in performance and capacity, what should I own?"
The BOSM System Multiprocessor.

"How much more does it cost to own a single-user set-up and upgrade it, than to start with a larger system?"

Not a penny more.

"Can I have diskette, tape, and large rigid disk storage?" Yes. "How about really good accounting software?"

The MBSI\* package (GL, AR, AP, PR, OE/INV, Sales Analysis — all in Cobol) is probably the best available on any system...this is one you have to see to believe.

"How about Word Processing?" WordStar \*\*\*, and others.

"Can I run all the other software I've seen?"

Yes, if it's CP/M\*\*\* compatible, almost certainly!

"Will I have to change the operating system when I expand?" No, with BOS/TURBODOS\*\*\*\*, just upgrade it.

"Well, this is important...will service be available when I need it?"

Yes, with a large dealer network, strategically placed maintenance depots, and fast factory repair turn-around.

"Sounds great! But isn't it too good to be true?"

No...and it's not even expensive! So, why take a chance with somebody else?

"Okay, how can I get one?"

## **Product Description**

## Tele-VIC

#### Commodore Breaks the \$100 Price Barrier for Modems

Max Lebow 2121 Locust St. Philadelphia, PA 19103

A really good modem takes a telephone number stored in your computer's memory, dials it, selects the appropriate originate/answer frequencies, and starts communicating at 9600 bits per second (bps). Unfortunately, a really good modem can also cost as much as a good used car.

If you are willing to dial your own telephone, set a manual switch to select originate/answer frequencies, and settle for 300 bps, Commodore's new modem may be an inexpensive solution. In fact, for the price of a moderately good 1200-bps modem, Commodore will sell you its modem and a VIC-20 home computer to go with it.

The modern is the VICMODEM. It is contained in a slim plastic case with an edge connector at one end and a modular telephone jack (for the handset cord) at the other. The edge connector attaches directly to the VIC-20, which has a special telecommunications slot to accept this modem or Commodore's RS-232 interface (see photo 1). (The VIC-20 is named for the Video Interface Chip. which provides the necessary interface between the computer and a television set. The VIC-20 has built-in connectors for a television (RF) and a video monitor. It also has a typewriter-style keyboard, which is unusual for a computer in this price range.)

The modem is compactly designed on a single circuit board and conforms to the Bell 103 modem frequencies. It uses Motorola modem integrated-circuit chips and has a crystal to ensure frequency stability. Selection of originate or answer frequencies is accomplished manually

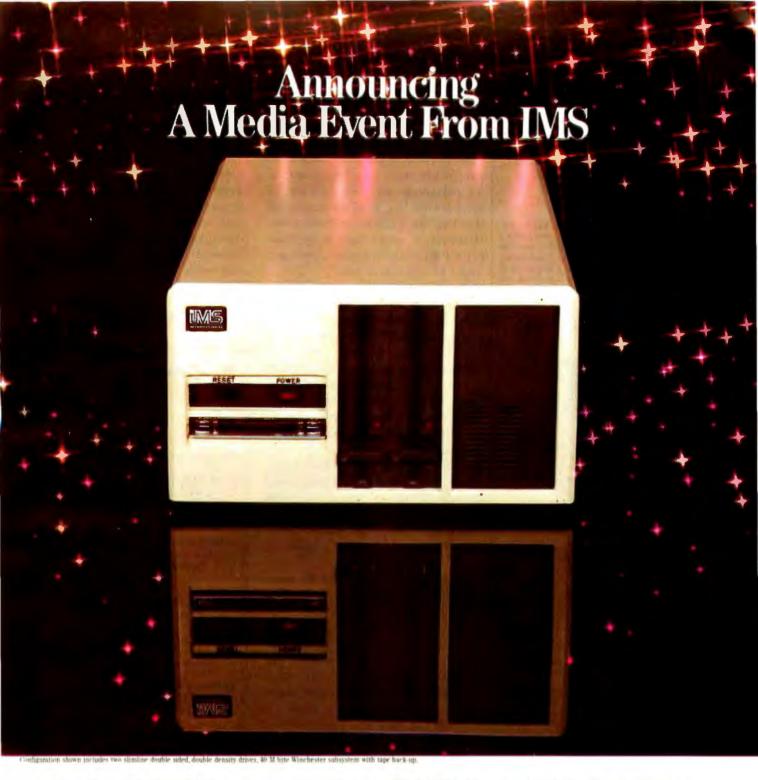

by setting a small slide switch on the side of the unit. A carrier-detection LED (light-emitting diode) is also provided.

A cassette contains the object code for the interface program VICTERM I. The features included in this software are impressive. They include:

Word wrap: If the word at the end of a line is too long to fit on that line, it

Photo 1: This low-cost modem for Commodore's VIC-20 home computer takes a modular plug from a telephone handset and plugs directly into VIC-20's telecomputing slot. The modem shown here is a prototype with a provisional model number.

#### The New 8000 SX Micro Computer System With Winchester And Floppy And Tape

Winchester technology brought a tremendous increase in capacity, but it also dumped a big problem in your lap.

How to dump all that data? Trying to transfer 10 to 40M bytes of data between Winchester and floppies takes an armload of diskettes and a lot of time.

Cartridge tape is fast, but not efficient for random file handling. Answer?

The new 8000 SX Micro Computer System with Winchester plus Floppy and Tape. It lets you back up and restore a single file or a complete drive with maximum efficiency.

Choose from 10, 20 and 40M byte Winchester subsystems, with error detection and correction, capable of loading a 20K byte system program in less than a second.

The floppy subsystem offers up to 1.2M byte per 8" drive.

The bulk memory subsystem, an incremental cartridge tape drive, stores up to 17M byte on a single cartridge.

And, of course, the computer itself offers proven IMS top performance and reliability. Compare its full 2-year warranty.

Operating systems include CP/M, MP/M, and the incredibly

powerful TurboDOS.

For all the facts and the location of your nearest IMS International dealer, call us today at (714) 978-6966. Or write:

We Build Computers As If Your Business Depended On Them. 2800 Lockheed Way, Carson City, NV 89701 Telex: 910-395-6051

#### Choose an Apple Desk

A compact Bi-Level desk ideal for the Apple computer system. This 42" × 29½" desk comes with a shelf to hold two Apple disk drives. The top shelf for your TV or monitor and manuals can also have an optional paper slot to accomodate a printer. It is shown here with the optional Corvis shelf which will hold one Corvis disk drive. The Corvis shelf is available on the 52" x 291/3" version of the Apple desk.

#### Choose a Micro Desk

The Universal Micro desk accommodates the \$100. type microcomputers. The desk is available in four sizes: 17.75 inch, 19.06 inch, and 20.75 inch wide openings with 24 inch front-to-rear mounting space. The fourth size is a 20.75 inch wide opening with a 26.50 inch front-to-rear mounting space.

#### Choose a Mini Rack

Mini racks and mini micro racks have standard venting, cable cut outs and adjustable RETMA rails. Choose a stand alone bay or a 48", 60", or 72" desk model in a variety of colors and wood tones. A custom rack is available for the Cromemco.

#### Choose a Printer Stand

The Universal printer stand fits the:

Centronics 700's Dec LA 34 **NEC Spinwriter** Lear Siegler 300's

Diablo 1600's & 2300's T.I. B10 & 820 Okidata Slimline Anadex 9500's

Delivery in days on over 200 styles and colors in stock. Dealer inquiries invited.

#### **ELECTRONIC SYSTEMS** FURNITURE COMPANY

17129 S. Kingsview Avenue Carson, California 90746 Telephone: (213)538-9601

#### Product Description\_

is whisked to the beginning of the next line. This feature is particularly useful for the VIC-20 with its maximum line length of 22 characters. Without this word-wrap feature, the screen would quickly become cluttered with many word fragments at the beginnings and ends of lines. (A 40-character-line software option for the VIC-20 is under consideration. However, it would use a 3 by 5 dot matrix to form the characters and might be difficult to read.)

Half or full duplex: Half duplex means that the "echoplex" used by some data networks is not utilized. Communication still takes place in two directions on two frequencymultiplexed "channels," but the host computer no longer echoes what the user types. Instead, the VIC-20 displays what the user types directly on its own screen. This feature is also menu-selectable.

Color separation: In the half-duplex mode, the software can display what the user types in one color, while displaying the host computer's output in another color. This feature makes user-computer dialogues easier to read.

Data rate: This selection on the menu goes from 0 to 300 bps. Some datacommunications aficionados may turn up their noses at a data rate of 300, but most economy moderns do not exceed it. Three hundred bos translates into 300 five-letter words per minute. This is faster than most of us type and faster than a radio announcer can read,

Five parity settings: These are also menu-selectable. They are: even parity, odd parity, parity set to one (mark), parity set to zero (space), and no parity (eighth bit treated as data). This feature goes a long way toward assuring that the modem will make the VIC-20 compatible with most 8-bit-byte transmission schemes. More on this feature later.

By now, a cartridge with even more features should be available, priced around \$50.

If you decide not to buy the VICTERM I software, Commodore provides a free printed copy of a

short BASIC program with the modem (see listing 1). You key this program in before dialing and eventually record it on your own cassette. It has none of the features listed above for the VICTERM I software.

What do engineers at large data networks recommend when using an inexpensive modem to connect to their expensive computers? Mike Marburger, Tymnet's Eastern Region Technical Manager, recommends setting parity to zero (space) on the modem and typing control-H immediately after the Terminal Identifier (TID) to disable Tymnet's

## Pascal Computer Design

Volume No. 4

**PENN YAN, NEW YORK** 

25 CENTS Cheap

#### **IMP Debuts**

A Generation Bayond MuMath and FORTRAN

Programmer/Engineer John Clarke has released his IMP (Instant Mathematical Programming) for use with all UCSD p-System machines, as well as for CP/M users with Pascal/M. The program, which was introduced at \$225, permits anyone (yes, a non-programmer) to generate sophisticated Pascal programs to solve complex linear and non-linear equations.

#### **IMP Writes It**

The IMP software first simplifies an algebraic problem statement (entered in simple text form), then writes a Pascal source program which, when compiled, gives the user a solution. The compiled program then permits the user to interactively redefine constants or variables, or to maximize given parameters. Reviewers claim this system may replace FORTRAN as the engineer's computer standard.

#### TURNKEY CHEAPER THAN CP/M

Eliminate Need for Operating System Boot to Run Applications Approach (End Users Relieved)

P-System Turnkey Packages are now available for applications developers to distribute with their programs. The software allows the enduser to "Boot and Run" without needing to learn about operating system commands. Full backup, editing and file handling capabilities also available at a fraction of the full system cost. This should prove to be a boon to systems houses. and it's cheaper than CP/M!

## LOGICALC (TM) moves "Calc" Software to UCSD Environs

LOGICALC (TM) gives spreadsheet capability to all those other micros. Does -Does Regression Analysis -Accepts Database in-Out

Penn Yan-Logicalc (TM) has swept the Pascal world by storm. Only \$295 a complete package.

#### RADIO SHACK'II, III GET p-SYSTEM

Now Can Share Programs with Apple, DEC and IBM

Penn Yan- PCD Systems, who originally installed the p-System on the TRS-80 Model if have announced release of the complete system for the TRS-80 Model iff. The p-System requires a 48K Model III with 2 disk drives. Now Radio Shack users can write programs compatible with Apple, Commodore, IBM (Personal Computer) and DEC machines (and vice versa).

A spokesman from the company noted that p-System software for DEC, Altos, Terak and Apple are already available from PCD Systems, Inc.

#### Chapin Refuses to Reveal True Meaning of CPR

Penn Yan- Chip Chapin, who recently released his CPR "text formatter" refuses to reveal the true meaning of his new program's title.

CPR, which was designed for use with the UCSD p-System operating system software, takes raw text files produced from the Editor and formats them for printing. At \$195, CPR provides sophisticated word processing capabilities for a fraction of the cost.

So, when someone mentions CPR, don't think "first aid", think "text aid",

Now available at PCD Systems, Inc.

§CP/M is a tim of Digital Research 1DEC, PDP-11 LSI-11 & RT-11 are tim of Digital Equipment Corp • MuMath is a tim of Microsoft

\*p-System is a tim of the Regents of California \*TRS Model II. III a TRSDOS are tim of

the Tandy Corp • Z-80 is a tm of Zilog Corp

## UCSD p-System To Burst CP/M's Balloon

Experts predict 8-Bit to 18-Bit Portability Crucial Support from IBM, Texas Instruments, Philips, Hewlett Packard, Commodore Announced

San Diego- Sources close to the battle predict that recent Version IV.O release and the master design that allows programs compiled on an 8-bit machine to run unchanged on the new 16-bit micros will give the p-System the "industry standard" status presently enjoyed by CP/M. They say that Soffech and PCD Systems have come up with the most viable system for the 80's.

Cross assemblers and "Pseudo-Code" allow programs developed on an 8-bit 6502 (such as Apple or Commodore) to be transported to a 16-bit 8088 (IBM) or LSI-11 (DEC) in OBJECT CODE FORM. A program can be executed without change on dozens of different machines with any common terminal.

Structured Programming lowers Maintainence Costs

P-System structured languages give developers powerful tools. A complete implementation of Pascal (plus many useful extensions) is available, as is FORTRAN-77, which supports the ANSI-77 subset for that language. A new BASIC compiler and a full range LISP interpreter round out the high level languages available. The structured approach to programming eliminates maintenance headaches which plague present users of standard BASIC and FORTRAN systems.

Speed No Longer an Issue
Linkage of Code segments in assembly tanguage and/or use
of the NATIVE CODE generators give compact code without
the sacrifice of speed expected from p-Code Interpretation.
One can have one's cake and eat it too!

Dynamic Memory Management

Virtual operating system characteristics with nearly unlimited overlaying of program segments allows the user to run larger programs than other microcomputer operating systems. Program chaining, print spooling, 128K addressing capability and efficient use of system library units, universal screen control coding, and many peripherals configurations are fully supported. Command files, asynchronous I/O processing, p-Code debugger, procedural cross referencer and many more capabilities are being hailed by thousands of users.

#### 20% Off List

Penn Yan- PCD Systems is giving purchasers 20% off Softech Microsystems suggested list price for those who buy a complete UCSD Development System by July 1st. Operating System, File Handler, Screen Editor (with word processing capabilities) system Library, Assembly Code Linker, Pascal Compiler and full documentation over 1000 pages is being sold for only \$800 complete. Compare other systems of this power and capability at three times the price!

## For a Catalog of UCSD p-System and Applications Software

write to PCD Systems, Inc. P O Box 143 Penn Yan, NY 14527 (315) 536-7428

(or stop in, Penn Yan is no stranger than Armonk)

Circle 307 on Inquiry card.

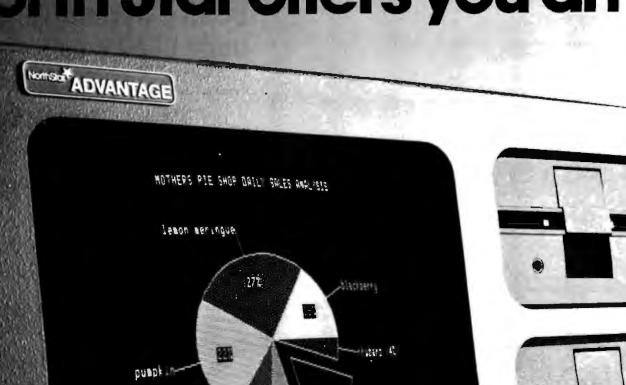

#### Cross Assemblers, File Conversion Transfer

A complete set of native code generating cross assemblers generate absolute or relocatable code for the Z-80, Z-8, 8080, PDP-11, LSI-11, 8502, 6800, 6809 and 9900 microprocessors and are available through PCD Systems. File conversion programs for transferning data between TRSDOS, CP/M, RT-11, Microengine and IBM 3741 formats and p-System format add depth to system capabilities.

#### Complete Portable Environment

The standard p-System still includes that amazing screen editor (with its programming and word processing modes), file handler, interpreter, formatter, backup and configuration programs, and your choice of compiler. PCD Systems together with UCSD and Soffech have advanced the state of the art!

## North Star offers you an

# incredible Advantage over IBM and Apple.

The ADVANTAGE™ desktop computer from North Star is better in every category than either the IBM Personal Computer or the Apple III. Compare for yourself!

#### **Incredible Data Storage:**

The ADVANTAGE has twice the diskette capacity of either the IBM PC or the Apple III. This means you have twice as much information at hand.

#### **Incredible Graphics:**

The ADVANTAGE gives you a higher precision display. A revolutionary software package called BUSIGRAPH™ is provided at no extra charge for preparing graphs, bar charts, and pie charts.

#### Incredible Software:

The ADVANTAGE is fully CP/M\* compatible. Neither IBM nor Apple provides this ability to run the broadest range of industry-standard applications. In addition, only North Star offers 10 application packages for word processing, financial analysis, accounting and data base management.

#### Incredible Convenience:

ADVANTAGE is the only one of the three that's fully-integrated. It fits attractively on your desk without the clumsiness of the multiple-enclosure, multiple-cable approach taken by IBM and Apple.

#### Incredible Price:

The ADVANTAGE from North Star offers you the best in price/performance. You get more data storage per dollar invested, more applications programs, more available languages, and more graphics capabilities. At an incredible list price of \$3999.

To find out more about our incredible family of desktop computers with graphics, call TOLL FREE 800-447-4700. (Illinois 800-322-4400.) North Star Computers, Inc. 14440 Catalina St., San Leandro, CA 94577 USA (415) 357-8500. TWX/Telex (910) 366-7001.

InterSystems has done it again! The new Series III operates at 6 MHz and includes software to fully utilize the 256K high speed memory. You can buy it from BRIDGE for \$5545—check out these features. . .

- Operating system software that effectively utilizes the 256K RAM
- CP/M 2.2 and Cache BIOS™ that speeds operation up to 4 times
- 6 MHz CPU with powerful 1 MByte memory management system
- 256K memory—6 MHz with parity and 8/16 bit transfers
- S-100 Bus follows IEEE 696 Standards
- Two serial ports and four parallel ports with two interrupt controllers
- Dual double-density soft-sectored 5¼" drives (0.8 MByte total)
- Easily upgraded to 6-user MP/M system.

But we are sure that you want turnkey operation, so we have packaged a system that includes . . .

- InterSystems Series III Computer P/N CB-256/525
- BMATE™ screen oriented text editor/word processor
- Zenith Z-19 or Televideo 950 Terminal.

#### INTRODUCTORY OFFER

Special ORDERING INFORMATION List Offer \$6545. InterSystem CB-256/525 Computer with software \$5545. As above with BMATE™ and Zenith Z-19 Terminal 7590. 6495 As above with BMATE ™ and Televideo 950 Terminal 6725.

For something still more powerful, ask about the BRIDGE enhanced systems, including the FORTRAN Development and the Compiler systems, based on InterSystems computers.

Call to order, or send for complete information. Dealer inquiries invited.

Cache BIOS is a trademark of Ithaca InterSystems, Iru BMATE is a trademark of BREDGE Computer Company Division of Sea Data Corporation.

ONE BRIDGE STREET NEWTON, MASS. 02158 U.S.A. PHONE: (617) 244-3203 default (automatic) echo state. Tymnet can, at the interface to a host computer (not a terminal or home computer), routinely strip parity coming in from terminals and microcomputers and put on whatever type of parity the host computer requires.

General Electric Information Services Company operates a network similar to Tymnet, although GE's is much larger. In fact, it is the largest international data-communications network in the world. Robert Mc-Calley, manager of the communications and distribution system, recommends setting the modem to half duplex and no parity (treating the eighth bit as data) before logging on.

Keith Boyer, a spokesman for Compuserve's technical services. noted that although any parity setting will put ASCII characters on the screen, the eighth bit must be sendable and receivable as data in order for Compuserve's A and B filetransmission protocols to work properly. These protocols are used for important functions such as downloading programs to user memory. Also, transmission of some graphics characters requires the eighth bit. The "no parity" selection on the VICTERM I menu should be selected when using the A and B protocols or graphics programs.

As this article was being completed. The Source had some information for VIC users in its Commodore Business Machines database.

The VICMODEM was developed under the watchful eyes of Michael Tomczyk, The development process took four months from start to finish. he said in a recent interview. The toughest part was bringing it in at the right price. Tomczyk, who has an astute sense of the marketplace for home computers, assessed the future of the modem this way: "We think this modem may sell as many VICs as the game cartridges."

With a growing number of giant publishing firms gearing up to supply electronic newspapers, videotex, and other home data products, he may well be right.

## **NEW HIGHER PRINTING SPEED, NEW LOWER PRINTER PRICE**

#### High-speed printer

The Heath/Zenith 25 Printer is a heavy-duty, high-speed dot matrix printer that gives you sharp, clear printouts. It prints crisp, clear copy at speeds over 150 characters per second with quiet smoothness.

Baud rates from 110 to 9600 are user-selectable.

#### Versatile printer

The 25 prints the entire 95-character ASCII set in upper case and lower case with descenders, in a 9x9 matrix, Also, 33 block graphic characters – which are compatible with the Heath/Zenith 89 All-In-One Computer and the 19 Smart Video Terminal - let you create graphs and charts. All functions and timing are microprocessor-controlled.

Plug-in ribbon cartridges make ribbon replacement a no-mess snap.

The 25 works with most computers and terminals using an RS-232C Serial Interface or a 20 mA current loop with handshaking control signals.

#### Low-priced printer

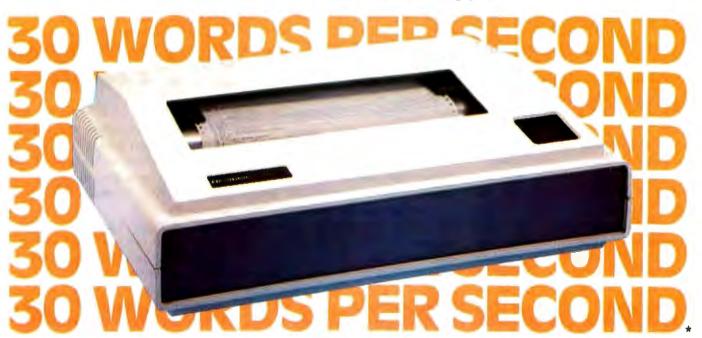

The 25 has all the features you've been looking for in a highquality, high-speed dot matrix printer - for only \$1095 in kit form, or for only \$1595 assembled and tested.

#### Free demonstration awaits you at your Heathkit Electronic Center †

Pick the store nearest you from the list below. And stop in today for a demonstration of the new Heath/Zenith 25 Printer. If you can't get to a store, send \$1.00 for the latest Zenith Data Systems Catalog of assembled commercial computers. We'll also send you a free copy of the latest Heathkit® catalog. # Lowercase Descenders for the Epson MX-70

Bruce Piggott 35 Beverley Rd. Stevenage, Hertfordshire SG1 4PR, England

Like most home-computer owners, I wanted a printer and, like most, couldn't afford one. But as prices began to fall, I gradually realized I could afford the Epson MX-70.

The MX-70 uses ordinary paper and has a graphics mode, but unfortunately it does not do lowercase descenders. This didn't worry me too much because most of the printing I wanted to do was program listings.

However, after working with the printer, I realized that although the MX-70 has eight print wires, it uses only seven in text mode. That meant lowercase descenders would be possible by switching to the graphics mode at the right time and using all eight print wires to create the lowercase letters.

Strangely enough, the MX-70 can print true descenders mechanically, but electronically the option was not available. I decided to write a machine-language program to modify the output.

The technique is to have a small program that examines the output of a printing routine. It looks at the ASCII (American Standard Code for Information Interchange) character in the microprocessor's A register to see if it is a lowercase letter with descender (e.g., g, j, p, q, or y). If one of those letters is not in that register, then the program jumps to

the standard output routine and prints the character in the normal way.

If, however, the letter requires a lowercase descender, the program switches the printer into the graphics mode and outputs a string of data that drives the printing pins to construct the improvised character (see listing 1).

The program assumes that the printer controller card is in slot T. The equates (EQU) in lines 19, 20, and 21 must be changed for other slots: for slot 2, add hexadecimal 100 to the numbers, for slot 3, add hexadecimal 200, and so on.

If the character style is not to your liking, it can be changed by modifying the appropriate data string. The format is 5 dots wide and 8 dots deep, with the first byte defining the left side of the character and with the most significant bit at the top. The data string must end in a zero, as this is the delimiter for the program.

The program can also be extended to modify other characters or create some that are not in the standard ASCII set, for example:

- to change the number sign (#) to the English pound sign (£)
- to intercept normally unprintable codes (0 through 7) and print graphics

to print Chinese characters

Plan the character you wish to design on graph paper. Convert the vertical columns into hexadecimal values using the tables in the MX-70 operation manual (remember the top bit is most significant). Then insert the resulting string into the source code in the DATA1 file (line 93), and insert the representative ASCII code into the "match" string (line 87). If you add a string at the end of the DATA1 file, you must also place the matching ASCII code at the end of the match string.

The program resides at hexadecimal 300 (decimal 768) and this address will have to be entered into the printer driver program.

Anyone planning to use this technique should expect that the operation of the MX-70 will seem a little strange at first. Whenever the MX-70 enters the graphics mode, it completes printing whatever is in the buffer up to that point, then backsteps to print the graphics. Consequently, the speed of the printer will slow down proportional to the number of lowercase letters with descenders. For this reason, I use the routine only for the final copy.

But the combination of the MX-70 and this program has saved me over \$150 compared to the price of the MX-80. And now I also have the use of the graphics mode.

Listing 1: The Lowercase Descender program for the MX-70 and Apple II. Not only can you get true lowercase descenders, but you can program your own characters.

## INTERESTED?

LET'S TALK

# CONCEPT: PRIVATE COMPUTERS

Our marketplace is maturing. Those of you that were around in 1977 will remember what it took then to make a sale...(anything that worked!)

The two beautiful faces at the left are evidence that changes have occured in the industry!!!

Besides an excellent, well proven S-100, CP/M, Z-80 4MHZ computer system, we have a few extra things to offer. (Not the model!)

Delta specializes in something called a **Private Computer**. It's for those of you systems integrationists that have matured with the market. You stopped assembling systems in your garage a long time ago, but still need a totally flexible computer line that your customers won't find at *Wards* or *Sears*.

- A Private Computer means you will never see one of our computer systems on the shelf of your local department store or computer shop. We only sell to systems integrationists who add value to our product.
- A Complete Range of Products is available. No other micro company in the world offers a more complete line of equipment to satisfy your needs. We have everything from low end single user systems to the top of the line 64 user distributed processing networks.
- The DP Software Library is growing every month. We supply Accounting, Business Management, Code Writing, Medical, Dental, Chiropractic, Word Processing, Property Management and other programs. We have the source code in most cases and can negotiate customization if needed. Video taped training cassetts to aid you and your customers in learning how to use the programs and run the hardware are available.
- Factory Support and Service is available in most large cities. There are 66 fully stocked factory maintainance centers in the U.S. and 12 outside the U.S. In more remote areas, our 24 hour fast turnaround component pool can be used to insure reasonable response times to satisfy customers. We have a customer service Hotline independant of sales or service. We have a 24 Hour Modem Engineering Advisory Billboard.
- Our Engineering Assistance and Software Development Program can make headaches turn into profits. We maintain a staff of Engineers and Programmers whose services can be leased to expand your range of services. Problems from something as simple as hooking up a new printer or modifying an existing software program to customize a screen display can be resolved with this service.
- Financial Assistance is available through a flexible credit program that can not only get the product to you quickly but keep your cash busy where it will do the most good. 30 60 90 day flooring plans can be arranged to allow you to collect your money before you have to pay us.

Sherry Starkey is on line right now at Delta to direct you to your area representative. If you have a half inch Beta or VHS video machine, ask Sherry for a sales demonstration in your own home or office. See the Plant, the People and the Program.

# **NEW FROM NETRONICS**

# **AUTO-PATCH** HARD DISK

With plug-in multi-user ports Automatically Installs Itself Into Your Present CP/M° 2.2 Operating system & Floppy Disk Hardware.

It's Exclusive!

12 megabytes . \$3495.00 5 megabytes . \$2995.00

What's the big concern of \$100 owners when they consider adding Hard Disks? They worry that it will be difficult to install, that it won't be compatable with their present software and hardware, and that it may cause down-time on their \$100 system.

Worry no more — Netronics new AUTOPATCH Hard Disks Systems are here. AUTOPATCH installs in just one-two-three: (1) plug in the hard disk \$100 card: (2) run three short programs supplied on disk. (3) disable the boot on your lioppy controller and enable the boot on your hard disk controller (this step not required if wish to continue to bool to your floppy drives)

And thats it The AUTOPATCH leature automatically finds the end of your existing BIOS and then self relocates and patches itself into the existing BIOS a virgin copy of CCP and BIOS are loaded into memory, a customized SBOOT is added to the front of CCP and a customized SBOOT is added to the front of CCP and the whole memory image is written to the reserved fracks on your hard disk. You can add up to 4 hard disks to the controller supplied The new BIOS will automatically rename any old devices as B, and C, and define the hard disk as drive A.. All with the lift of one linger!!! If your BIOS is large you may have to resysten your system down to 2 k. If this is necessary the AUTOPATCH program will prompt you to do so

AUTOPATCH Hard Disk Systems are available in 6 AUTOPATCH Hard Disk Systems are available in 6 and 12 megabyte models, included in the system: 6 or 12 megabyte Hard Disk Drive; ... Controller for up to 4 Hard Disk drives S100 Hard Disk card with provisions for adding 8 additional 100 ports to be used when adding a multi-user operating system. Power Supply Deluxe Steel Cabinet All necessary cables AUTOPATCH Programs supplied on either 8" or 51%" IBM formatted single density diskettes (specify style required). Complete installation instructions Fully wired and tested, ready to go

# **New JAWS-IB**

The Ultrabyte Memory Board

Due to the tremendous success of our JAWS I, we were able to make a special purchase of first-quality components at helow-cost prices for JAWS-IB. And we are sharing our cost saving with you. But don't be surprised if the next time you see this ad the prices have gone up substantially. Better yet, order now, and get the best memory on the market at the best price on the market.

ONE CHIP DOES IT ALL

ONE CHIP DOES IT ALL Jaws-IB is the Rolls-Royce of all the S100 dynamic boards. Its heart is Intel's single chip 64K dynamic RAM controller. Eliminates high-current logic parts delay lines... massive heat sinks... unreliable trick circuits. JAWS-IB solves all these problems.

LOOK WHAT JAWS-IB OFFERS YOU

Hidden refresh . . fast performance . . low power consumption . . latched data outputs . . . 200 NS 4116 RAM's . . on-board crystal . . RAM Jumper selectable on 8K boundaries . . fully socketed . . . solder mask on both sides of board . . . phantom line . . . designed for 8080, 8085, and Z80 bus signals . . . works in Explorer, Sol. Horizon, as well as all other well-designed \$100 computers.

\*\*\* SUCCESSFUL ASSEMBLY: NO ERRORS

Next to keeping all your data on Verbatim Datalife<sup>\*</sup> flexible disks, the best thing you can do for your computer or word processor is to keep it running clean and error-free.

And the way to do just that is with Verbatim's new Datalife Head Cleaning Kit. It can remove up to 90% of the debris contaminating your drive heads. Dust, dirt and debris that causes data loss and errors, hinders system performance.

## Quick and easy to use

All you have to do is remove a Cleaning Disk from its protective pouch, put the disk in the special jacket, insert it into your drive and turn it on.

In just 30-60 seconds, your drive heads are cleaned.

# Cleaning, with no cleaning mess

With your Datalife Head Cleaning Kit there's no hit and miss applying solvents that can splash and spill.

What's more, with Datalife Cleaning Disks every time you clean your heads, you can do it with a fresh, clean, disposable disk.

#### Cleans both Single and Dual Head Drives Safely

There's no worry about damaging your system with Datalife Cleaning Disks. And you can use them on single or dual head drives.

## Protect your investment

The Datalife Head Cleaning Kit will help you guard against data loss, errors, and degradation of system performance because of debris contamination.

So if you want your data back verbatim, keep it on Verbatim disks. And keep your disk drives clean with Verbatim's Datalife Head Cleaning Kit.

Call (800) 538-1793 for the name of your nearest Verbatim dealer. (In California and outside the U.S. call (408) 737-7771 collect.)

# System Notes

# Add a Full-Sized Keyboard to Sinclair's ZX80

Wayne J. Cosshall
Swinburne Institute of Technology
POB 218
Hawthorne 3122
Swinburne, Australia

The Sinclair ZX80 keyboard has several obvious limitations. After only a short period of use, the user will begin to realize that the keyboard is awkward and doesn't really allow any degree of speed. Another limitation is not so obvious: the lack of a true reset button. This may not be apparent when running BASIC programs, as the break key works well, but a reset button is necessary when running machine-code programs or subroutines. Thankfully, all of these limitations can be eliminated (see photo 1).

# Adding the Keyboard

The ZX80 decodes its keyboard by software. To the processor, the keyboard appears as a block of I/O (input/output) ports. The upper 8 bits of the address bus, A8 through A15, are apparently used to strobe the keyboard sequentially, and the resulting values on the data bus are decoded. Figure 1 shows this interconnection as it appears from the back (solder side) of the ZX80 printed-circuit board. If software makes address line A9 high while the A key is pressed, D1 will be high, but D0

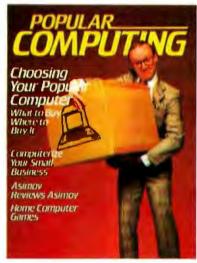

Photo 1: The ZX80 in operation with its new keyboard.

# Introducing "Popular Computing," the key to understanding.

Now you don't have to be a computer professional to unlock all the mysteries, potential, and pleasures of home and small business computers. Popular Computing, the new monthly magazine from McGraw-Hill, is the key.

Created in response to growing demand for our informative quarterly onComputing, Popular Computing explores every aspect of personal computers and their use. All reported in easy-tounderstand nontechnical language.

# The answer to "Computerphobia."

Even the most computerunsophisticated reader will find Popular Computing interesting and stimulating. Every issue will contain straighttalking product reviews,

special news briefs, and feature articles by famous guest contributors (like Isaac Asimov). There'll even be a helpful glossary of computer jargon we couldn't avoid using, and much, much more.

# Special Introductory Offer.

Send in this coupon today, and take advantage of Popular Computing's Special Introductory Offer.

**System Notes** 

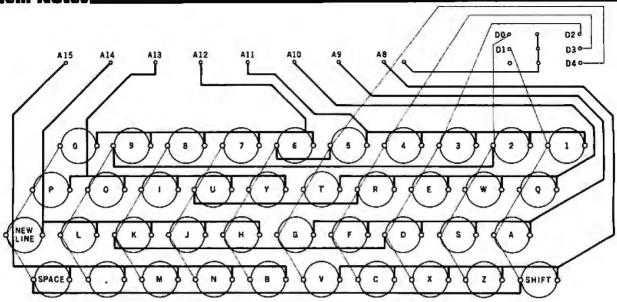

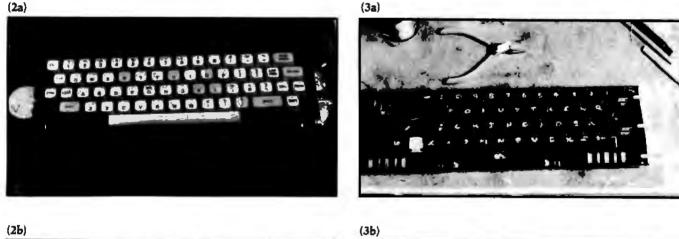

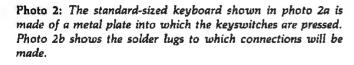

Figure 1: The connection of keys on the Sinclair ZX80 keyboard. The black lines represent actual traces on the "solder side" of the printed-circuit board. The red lines are connections made on the other side of the board. The ribbon-cable connection to the new keyboard is made to the points labeled A8 through A15 and D0 through D4. When wiring the new keyboard, all connections should follow this diagram.

Photos 3a and 3b: Wiring the new keyboard. Photo 3a shows the first set of installed jumpers. The wire is standard 30 AWG wrapping type, wrapped once around each post before soldering. Photo 3b shows the completed jumper system.

and D2 through D4 remain low.

Photo 2a shows the keyboard I used, consisting of a metal base with holes into which the keyswitches are pushed. Two solder lugs on the back of each keyswitch make the connections (see photo 2b). Many of the symbols that are unshifted on a normal keyboard are obtained by using the shift key on the ZX80; consequently a number of keys on the new keyboard will not be used.

The first step is to wire the keys together (use figure 1 as a guide). Keys do not have to be arranged as they are on the ZX80, as long as the connections remain the same, and two or more keys may be used for the same function by wiring them in parallel (i.e., wire one as shown, then wire the two posts of the second key to the corresponding posts on this first key—I did this with the shift key to use the second shift key on the keyboard). Photo 3 shows how to wire the keys together. I used striped Kynar (wirewrap) wire to make the connections and insulating tape to shield the wires where necessary. A connector may be added to the free end of the ribbon cable.

The second step involves the connection at the ZX80 end. The ribbon cable should be carefully soldered to the points shown in photos 4a through 4c, then extra solder added to obtain a good connection. Avoid applying too

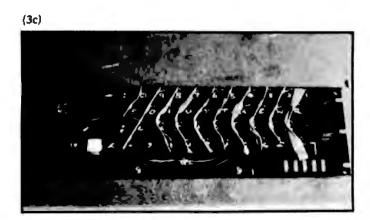

much heat as it can damage the board or solder pads. Again, a connector can be added to the ribbon cable.

Once the final connection is made, you're ready to test the keyboard. If you have problems, recheck your wiring on the new keyboard for a short circuit or broken connection. I had no such problems—the keyboard worked perfectly from the start. One potential problem, key bounce, never arose. Apparently the touch-sensitive keys on the ZX80 aren't as prone to this phenomenon as other keyboards. A constant worry was that the technique the ZX80 used to handle key bounce would not allow sufficient time for the key bounce on the new keyboard to settle down. In practice, however, this was not a problem.

# Adding the Reset Key

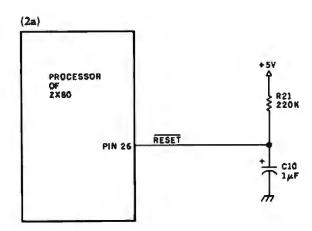

To reset, simply connect the reset pin of the Z80A processor, pin 26, to ground. There are two ways of doing this. The first uses the expansion bus. Pin 21A on the component side is the reset line, and pins 4B and 5B on the solder side are ground. All that is required is to connect a momentary contact switch between these two pins.

The second technique involves making these connections closer to the processor. I chose this approach because connections had already been made on the

Photos 3c and 3d: Extra insulation is added in photo 3c, and photo 3d shows the installed ribbon cable.

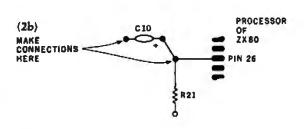

Figure 2: Diagram of the reset system used in the ZX80. Figure 2a is a schematic representation of the reset circuitry. Figure 2b is a sketch of the solder side of the circuit board where the connection to the reset key is made.

# STARTING YOUR OWN

Starting your own microcomputer business is easy if you know the right steps to take. Two volumes of the new book Your Fortune in The Microcomputer Business describe the things you should know to start right and to build your business successfully.

Many people have good ideas for a successful microcomputer business. But they don't know how to put their ideas into action. These people are plenty smart. That's not the problem. The problem is in knowing simple things: How to analyze the market. How to select the right product or service. How to get enough startup money. How to plan your growth and success. The answers to these problems are not hard to understand. All you need is the right information. Your Fortune in The Microcomputer Business gives you the knowledge tools to start right, grow and prosper.

This practical reference manual has no hocus-pocus. It does not tell you how to do astrology or dating services. It does give you clear, complete, step-by-step instructions on how to get started right and insure your success!

#### Volume I Includes:

- The bottest trends in the market
- The seven best test markets
- How to read between the lines at a trade show
- 107 ways to reach your market
- Examples of the best ads in the business
- How to get free advertising
- The 21 steps to set up your business
- How to start a manufacturing business
- E How to write a newsletter
- How to give a seminar
- How to start a service business
- How to package software for the mass market
- How to be a highly paid consultant
- Franchising—the good, the bad and the ugly
- Interviews with six successful microcomputer businesses
- How to use the RLC factor to be street smart, lean, mean and successful

#### Volume II Includes:

- Strategies for growth
- Straight facts on incorporation
- How to build your organization
- How to manage cash flow
- How to develop your accounting system
- How to manage employees, wages and salaries
- How to survive a cash crunch
- What to do if things get really bad
- How to maximize your profits
- How to grow by acquisition How to value your business
- How and when to sell your business

d Success

System Notes.

Photos 4a and 4b: Ribbon-cable connections to the ZX80. Photo 4a shows the solder pads to which the data-bus connections should be made (labeled 0 through 4). Photo 4b is the completed ribbon-cable connection.

underside of the board for the keyboard, so two more didn't matter.

Pull-up resistor R21 and capacitor C10 on the ZX80 are connected to the reset pin of the processor (see figure 2a). Thus, the reset switch can be connected between pin 26 of the processor and the grounded side of the capacitor (see figure 2b). I ran two lines with the ribbon cable to the keyboard I had added and connected two spare keys in series such that both have to be pressed together for a reset. This minimizes the chance of an accidental reset.

These simple modifications greatly increased the accuracy, speed, and ease of use of the Sinclair ZX80, and neither process is beyond the ability of anyone who has used a soldering iron on printed-circuit boards.

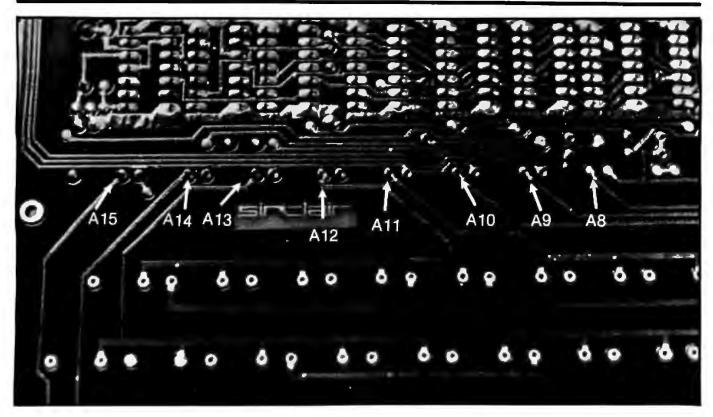

Photo 4c: The pads to which the address lines should be connected.

# Software Review

# Text Editing with Compuview's VEDIT

H. Bradford Thompson Department of Chemistry University of Toledo Toledo, OH 43606

VEDIT is a fast, friendly, adaptable, full-screen editor for use with CP/M and compatible operating systems. It is the first software product from Compuview, based in Ann Arbor, Michigan, If you're writing programs on the editor that came with CP/M, and particularly if you've never used a full-screen editor, then what follows will probably be of interest to you. With VEDIT, you always have a full screen of text in front of you. To add or change, you just type. If this review gives you an appetite for simplicity while editing, then VEDIT, at \$130, is well worth considering.

If you already own a word processor or a full-screen editor, you might still be interested in VEDIT. It's very adaptable to your video-display terminal, to your preferences in assigning special keys, and to the task at hand. I keep three versions: one for general text writing, one for BASIC programming, and one for assembler programming. (More about this under Customization.) VEDIT performs best as a programmer's editor. You can write notes, letters, and even manuscripts on it, but VEDIT is not a word processor.

#### What It's Like to Use VEDIT

VEDIT has two operating modes: a command mode (which works like a conventional command editor) and a visual mode. In visual mode, the screen is filled with a portion of the text. Most work is done in visual mode, so I'll describe that first.

The portion of text on the screen is called the *window*. I began the final version of this article by giving CP/M the command:

#### VEDIT BYTVEDIT.REV

If the file BYTVEDIT.REV had not existed, the message NEW FILE would have appeared briefly, after which the screen would have been cleared, with the cursor at upper left ready for entry of text. Until you have a change or correction to make, you just type in your text. In this case, the file already existed, so the window filled with the first lines of the file, with the cursor at upper left. You can move the cursor over the window at will, adding, changing, or inserting text. If the cursor rests on

existing text, what you type normally overwrites the old text. With one key, however, you can switch to an insert

#### At a Glance

# IN A WORLD FULL OF MEDIA HYPE, HOW DID DYSAN COME SO FAR SO QUIETLY?

Or so fast? We didn't become a \$100 million-plus company in less than nine years by producing just any magnetic media. We did it by making the best. The best in disc packs. In single rigid discs, In disc cartridges. In diskettes. And in mini-diskettes. Many major OEM's have recognized the difference that Dysan quality can make. And have endorsed it with their own private label.

Today, there are sales offices and distributors in the United States and

throughout the world, selling and servicing Dysan precision magnetic media... to OEM's, end users and retail outlets. If our media was just like everyone else's, we never would have come this far this fast.

Precision magnetic media from Dysan. Our media says it all For the location of the Dysan sales outlet nearest you, contact Dysan at. (408) 988-3472 Toll Free: (800) 538-8133 Telex: 171551 DYSAN SNIA TWX: 910-338-2144

Dysan Flexible Diskettes are also available from all Computerland Stores, Sears Business System Centers, and many Independent computer outlets nationwide.

Our Media Is Our Message

5201 Patrick Henry Drive Santa Clara, CA 95050 mode, where the new text is inserted and everything to the right is shifted to make room.

Old text can be deleted by typing spaces over it (which leaves blanks), by backspacing (which moves the cursor left, deletes that character, and closes up the line), or by hitting Delete (which does the same without moving the cursor). In addition to the usual moves up, down, left, and right, VEDIT's cursor commands include single-key moves to the start or end of the current line, to the beginning of the next line, or to the next tab stop.

Once you've mastered on-screen maneuvers, how do you move the window? VEDIT has one-key instructions that page up or down a little less than one screen-height; others move the window and cursor to the beginning or end of the text. If you want to move up or down just a few lines, move the cursor up until it reaches the third line (or fourth or fifth, the value is set during customization). From that point on, additional Up Cursor keystrokes move the text

down through the window (unless, of course, you're already at the beginning). Moving the cursor close to the bottom also scrolls the text up through the window.

An editor should be able to perform functions in addition to these on-screen manipulations. VEDIT handles these via an adequate command mode, which is designed to work nicely in tandem with the visual mode. For example, to replace every occurrence of the word OLD with the word NEW, the command string is:

#### #<S OLD \$ NEW \$> \$\$

The # means "do the contents of <> as often as necessary." S is the substitute command, and \$ is echoed when the escape key is used. By adding a V command.

#### #<S OLD \$ NEW \$V>\$\$

VEDIT enters the visual mode after each substitution, with the cursor marking the point where the change was made. If the substitution is sat-

TO START OF BUFFER	PAGE UP

TO START OF NEXT LINE	PAGE DOWN	TO END OF BUFFER
indent	Oursor down	
COPY TO TEXT REGISTER	MOVE TO TEXT REGISTER	INSERT TEXT REGISTER

Figure 1: Suggested keypad layout for Heath H-19 terminal. Shading (shifted keys) indicates large cursor movement and accompanying window movement as required. The H-19 should be set to Heath mode, the keypad shifted using internal switches and also set to Alternate keypad mode by including the sequence ESC = in the terminal initiation routine in the BIOS section of CP/M.

isfactory, you press one key to return to command mode. Since the V command is inside the <>, you're immediately back in visual mode, with the cursor marking the next substitution. Of course, you may discover that you set up the substitute command incorrectly. VEDIT's author has provided another escape from visual to command mode, which jumps out of the <>.

Command mode has an adequate set of editing commands, considering you'll spend most of your time in visual mode. It also provides file-handling commands and a means for changing disks and escaping from write-error and full-disk situations. I made up a full disk for testing and VEDIT did indeed let me off the hook in two ways: by deleting a file to make space or by changing disks.

## **Customizing VEDIT**

For those of us tinkering with new systems, VEDIT's strongest point may be its adaptability. The process is versatile, simple, and well documented.

VEDIT comes in versions for 8080 or Z80 processors and for serial interface or memory-mapped video displays. I've tested only the Z80, videodisplay version. You set up VEDIT by running a customization program called VEDSET, which leads you stepwise through the required choices. VEDSET first presents a list of nineteen popular terminals, including the Lear-Siegler ADM-3A, Heath H-19/Z-19, DEC VT52, Hazeltine, and Televideo, from which you identify your own. This lets VEDSET install the display-control escape sequences unique to your terminal, unleashing the speed made possible by those expensive features. If your terminal isn't included or if you've built your own, VEDSET provides special instructions and even an assembly listing of the terminaldependent routines and tables.

I've done most of my testing of VEDIT on a North Star Horizon with 51K bytes of memory, two disk drives, and a Zenith Z-19 (alias Heath H-19) terminal. I've also used a Cambridge Development Labs Graphics Display plus a homebrew character

# Our plug-in I/O boards can do it.

You already know you've got one of the finest microcomputers available. IBM made it. Now Quadram Corporation sets the standards for hardware that helps you realize the full capabilities of your Personal Computer...for the very lowest price.

Expanded memory. Until now, if you wanted a floppy disk, an RS-232C board, and 192K bytes of memory—all five slots were

Addmore filled. Thanks to Quadram, you can now have 192K on just one card, freeing up the other four slots for additional functions. Choose the I/O board that allows your computer to grow expandable to 192K):

64K RAM card (no-parity)—\$359; 64K RAM card—\$395; 128K RAM card—\$595; 192K RAM card—\$795.

And more. Quadram offers additional boards for your IBM Personal Computer, including: Serial RS-232C asynchronous adapter (expandable to two ports); expansion ROM card; clock/calendar; 8K non-volatile RAM (expandable to 16K); parallel printer interface. Several other boards will be available soon, all with the same high-quality performance you'd expect from any Quadram product, and all for a similarly low price.

Available right now. Expanded memory additional capabilities and unbeatable prices. Quadram's ready now to help your IBM bite off more.

For hurber information and the rame of your nearest dealer, call (404) 923-6666 or fill in this coupon and mail to Guadram Corporation, 4357 Park Drive, Norcross, Georgia 50083.

City State Zip

See us at booth 1242-44 at the Computer Faire.

generator and terminal emulator, which provided a pretty rigorous test of those special instructions. VEDIT makes good use of smart terminal features when they're available. However, unforeseen questions may arise. For example, H-19 users should be aware that VEDSET assumes your H-19 is in "Heath Mode." If you've set the internal switch to "ANSI Mode," you'll want to set it back. It didn't take me long to work this out. but Compuview's literature, including the special sheet on the H-19, failed to mention it. Other terminals may have similar problems. The Compuview people urge you to contact them if you have trouble, and my experience indicates that they mean it. A phone call (on a different question) yielded technical assistance right away, and when things became complicated, I was connected with VEDIT's author, Ted Green.

The next step in customization is assignment of keys for cursor and window movements and for a dozen other special operations in visual mode. If your terminal has special function keys, you can assign them. You can also use any control character (except CTRL-M) or ESC followed

by any letter. The assignment process is simple: VEDSET names the function, and you strike the key(s) you want to use. VEDSET will reject unsuitable choices. A sample layout for a keyboard without special keys is provided. My package included a suggested layout for the H-19, but I devised one I like better; its third revision is shown in figure 1. The instructions encourage you to try one of the sample setups and then revise it to suit yourself.

In the final segment of customization, you enter your screen size in characters, the number of lines up and down that you want the window to move when paging, and similar parameters. You can also set up two features of special convenience to programmers. First, there's a selective lowercase-to-uppercase conversion that operates on each line of text until some particular character is encountered. This lets you leave the caps lock off when entering programs, type your code in all caps, and type your comments in Iowercase, VEDIT switches modes when it crosses the : (semicolon) in 8080/Z80 code, the (apostrophe) in Microsoft BASIC, or the ! (exclamation point) in DEC BASIC Plus. This feature can be set up during customization and then altered during use from command level.

Second, there's Indent/Undent. You define a special key for Indent and another for Undent during setup and also specify an indent increment (say, 5 spaces). Each time you press the Indent key, it changes the position the cursor goes to when you press Return. One Indent and you return to position 6 instead of position 1; press Indent again and you now return to space 11, and so on. Each tap of the Undent key undoes one Indent. Even if the language you're writing doesn't require specific indents, this makes it easy to improve the readability of your code,

#### Other Special Features

A feature highly touted in VEDIT publicity is the Undo key. Whatever you've done on the line you're editing, one stroke on Undo and the whole line is restored—you're back

## \* ★ ★FEATURING 8 and 16 BIT S-100 SYSTEMS ★ ★

WE OFFER A WIDE RANGE OF CRTs, PRINTERS, GRAPHICS EQUIPMENT, SOFT-WARE FOR ALL SYSTEMS. EACH SYSTEM IS COMPLETELY TESTED, INTEGRATED AND READY FOR PLUG-IN OPERATION WHEN YOU RECEIVE IT. WE TAILOR & CONFIGURE SYSTEMS TO MEET YOUR BUDGET AND NEEDS. WE WELCOME YOUR REQUEST FOR TECHNICAL INFO BY PHONE OR LETTER.

NEW SYSTEMS FROM IMS 2 yr warmtee on boards! Integrated system with built-in monitor, detached keyboard, 5½° drives. Systems w/8° drives, optional 10,20 or 40 MB Winchesters, built-in tape back up, multi-user capability (TURBODOS or MP/M), Z-80, S-100 bus, Over 150 configurations to match your specific needs. On site service contracts for NY tri-state area.

SEATTLE COMPUTER 8086 SYSTEMS Featuring 86-DOS, the IBM PC Operating System.

CROMEMCO: Sale! 25% off systems/software; 15% off boards/components.

# JOHN D. OWENS Associates, Inc.

12 Schubert Street, Staten Island, New York 10305 212 448-6283 212 448-2913 212 448-6298 where you started. That seems like a good thing, but I don't use it much.

VEDIT also has a text register for moving or copying a block of text. Place the cursor at the beginning of the block, hit the Move key, move the cursor to the end of the block, and hit Move again. The block, now placed in the text register, disappears from the screen. You then move the cursor to wherever you want the text and hit the Insert key. Copy works the same way but doesn't delete the copied text from its original location. The Move key can also be used to delete a block of text.

One of VEDIT's best features is its speed in visual mode. VEDIT rarely rewrites the screen when it isn't necessary, and even when it does, the time required is not excessive. On the Z-19 at 9600 bps (bits per second), most operations seem instantaneous. Command mode, however, is another matter, A loop I set up to remove the first six characters from each line of a 200-line file took about 30 seconds.

#### **VEDIT** and Large Files

On my 51K-byte system, VEDIT's text buffer holds 35,786 bytes. (For comparison, Microsoft's EDIT80 holds 32,974, and Digital Research's ED holds 28,589.) That's almost 900 40-character lines. I rarely write single program modules that long, so I have limited experience with VEDIT's disk buffering for large files. On a 32K byte system, the buffer would hold about 17K bytes or over 400 lines.

Like most simple editors, VEDIT processes long texts by reading lines from an input file into the text buffer, where editing can take place, then writing into an output file. Progress is one-way. You can move the window at will over the text in the buffer, but once lines have been written to the output file, the entire text must pass through before the beginning can be reread.

VEDIT has command mode instructions to open and close files, to read and write lines, and to switch logged-in disks. There's even a single command to process the entire text and restart at the top of the file. However, these instructions aren't

needed in the simplest cases. VEDIT does auto-buffering while in visual mode: if you page past the end of the buffer contents, the first lines are written to output and new lines are read from the input file. Normally, the buffer is no more than 80 percent full, leaving lots of room for insertions. VEDIT also writes to the output file if you fill the buffer by inser-

My experience with other editors proved that supposedly legal operations could hopelessly scramble files on my disks. I've tried all the combinations that usually cause trouble. but VEDIT seems to handle them flawlessly.

#### What VEDIT Doesn't Do

I haven't found any serious bugs in VEDIT. A minor problem arises when you use the terminal's Repeat button to move the cursor around quickly or to delete a long string of characters. This works until VEDIT is required to do more than a simple operation. For instance, a repeated Up Cursor works until the cursor reaches the line where VEDIT must scroll down and write a new top line for each incoming Up Cursor. If Up Cur-

# THE PURCHASING AGENT

1635 School St., Suitet 101, Moraga, CA 94556

sor consists of the sequence ESC A, the Escapes can get lost, and one or several As may appear in your text. VEDIT's author, Ted Green, tells me that this problem is at its worst on the Heath H-19 terminal—the Repeat just sends too fast. In the absence of an interrupt-driven input buffer routine, the only remedy is a light touch on the Repeat button.

You can't enter control characters or reverse-video text into VEDIT's text buffer while in visual mode, presumably because any control character is a potential special function key. You can, however, switch to command mode, insert, say, your CTRL-L form feed, switch back to visual mode, and there it is, represented by the usual \*L.

Unfortunately, VEDIT doesn't provide a means for sending text to a printer. The only way you can print current text is to exit and use some other program. I find this annoying, but it hasn't caused me to take my command editors out of retirement.

#### Conclusions

VEDIT is a convenient, friendly, full-screen editor available at a reasonable price. It has several features specifically designed for program preparation and, for that purpose, has distinct advantages over command editors. It's readily adaptable to a wide variety of terminals and takes advantage of smart-terminal features. Special function keys can be assigned whatever functions you wish. If you don't have special function keys, substitute control characters and escape sequences of you own choice. The well-documented customization process is easily accomplished.

In addition to its screen mode, VEDIT has an adequate command mode. The command mode is useful in setting up string searches and substitutions; it also allows iteration macro commands that include transfers into visual mode and back. You won't spend much time in command mode. As part of a word-processing system, VEDIT has several limitations. You can't underline or even insert control characters in visual mode, and you can't send text to a printer.

# MicroMed™ and MicroDent™ make your practice perfect.™

# Simply the best!

They're the real solution to the problems confronting every physician's and dentist's office. Each is a unique package, developed through years of work in close conjunction with doctors and dentists. They'll help you treat your patients more efficiently and accurately, while saving you time and money in the process.

# Versatility.

Whether you are in private practice or a member of a busy group, there's sufficient capacity to handle your needs. Thousands of patients can be accommodated on floppies, and even more on hard disk. MicroMed and MicroDent can easily handle everything in your practice from billing to patient records to complex insurance forms. With millions of hours of actual use in medical and dental offices throughout the country, they stand alone at the top, in a class by themselves.

# Solutions, not more problems.

We know you're after solutions, not more problems. Our menus are simplicity itself, and are designed for <u>your</u> convenience (not our programmers'). The computer displays your options at every step. What could be simpler? Your own office staff can easily take care of the routine so that you can devote your valuable time to your patients.

# You are the boss.

Forget about problems with outside billing services or manual record-keeping. You exercise absolute control over your billing procedures. Finger-tip patient recall lets you know instantly whose accounts are due and what services were performed. Account aging is automatic, and past-due notices or statements are printed and addressed, ready for mailing. All types of reports may be requested to help you better understand your finances and cash flow. Daily backups are created automatically.

# Demo disk and manual set \$75!

Dealerships are available to established computer vendors on a territorial basis.

# Multiple Insurance Forms.

Many patients have several different types of insurance coverage. With MicroMed and MicroDent you can enter almost any form, keep track of which patients it applies to, and get it processed and ready for mailing. When new forms come out (as we all know they will) you don't have to pay for custom programming, you can modify the form print format yourself. With our exclusive Formulator system it takes just minutes.

### Economic Sense

The biggest surprise of all is that MicroMed and MicroDent are just \$2000 each. Plus, having your own office computer provides you with great tax advantages. If you like what you see, contact your nearest computer store. They can provide you with MicroMed or MicroDent on any CP/M® based computer for an amazingly economical price. Or, if you already have a computer, a demo disk and manual set is available for just \$75, and allows you to run the entire program. The manual separately is \$50. Send for one today, and make your practice perfect!

# Features:

- Automatic billing for any patient load
- Handles practices with up to 20 doctors
- Accepts all insurance forms
- Exclusive "Formulator" form system
- Multiple insurance coverage
- Insurance preauthorization
- Automatic statements with aging
- Instant access to patient records
- Full transaction and treatment details
- Cumulative totals by doctor
- Profitability analysis reports
- Mailing list maintenance
- Can be linked to word-processing
- Appointment recall with reminders

Keeps track of referring doctor codes

Maintains hospital and lab codes

# System Notes

# Add a Cassette Interface to Your VIC-20

William R. Hale 3309 June St. NE Albuquerque, NM 87111

During the time I've owned a Commodore VIC-20, I've found it to be an excellent home computer. You really get a lot for your money. With so many excellent peripherals being introducted recently, the VIC-20 will be a great addition to the home computer market. I do feel, however, that the price (almost \$100) Commodore is asking for a cassette recorder is a little high. Thus, I decided to design my own interface.

Figure 1 (on page 274) is a schematic of an interface that allows use of an ordinary, portable audio-cassette recorder to store programs from a VIC-20. The cost of the few parts needed, including a plastic case, runs about \$10; the parts are available at Radio Shack and other electronic parts stores. The audio tape needed to store programs need not be of high quality due to the tones the VIC-20 uses. The cassette "shell" itself should not be so cheap that it causes the tape to drag.

Most of the components I used were already in my home stock, including the 6-pin connector to the VIC-20 motherboard. (See figure 1 for part numbers.) The VIC-20 outputs 0 to +4 volts (V) and prefers as an input a signal of an amplitude between 0 and -4 V. (Later testing has shown that the VIC-20 will accept a 0- to +4 V input if the signal consists of true square waves and does indeed range from 0 to +4 V.) Capacitor C1 allows the recorder to receive a normal AC input; the combination of C2 and CR1 allows DC restoration for the VIC-20 input. R2 is merely a fuse to protect the

L1 is an LED used to indicate that data is coming into the interface and is of sufficient level to properly operate IC1, which is being used as a wave-shaping circuit. L1 isn't a necessary part of the interface, but since the SN7404 has extra inverters, you might as well use one for the indicator. Switch S1 is also unnecessary because you can tie the line coming to it low. However, if you do this, be sure your recorder is in PLAY for the load and verify operations and in RECORD for any save operations before pressing the return key. Switch S2 is needed to rewind the tape. Always return this switch to REMOTE immediately after using it in MANUAL.

My particular recorder, Superscope Model C-76, uses +6.7 V to drive its motor, so I was able to use the VIC-20's motor-power line directly. Figure 1 also illustrates an alternate method for controlling the recorder using the VIC-20's +6.7 V motor line as a control signal.

Notice that the shield on the AUX input of the recorder is not connected to the VIC-20 system ground. I found that if I tied this line to the VIC-20 ground, noise would appear on the external speaker output of the recorder while I was attempting to load a program from the recorder. This noise was of sufficient level to trigger the input of inverter IC1 prematurely and cause an error message to be generated by the VIC-20.

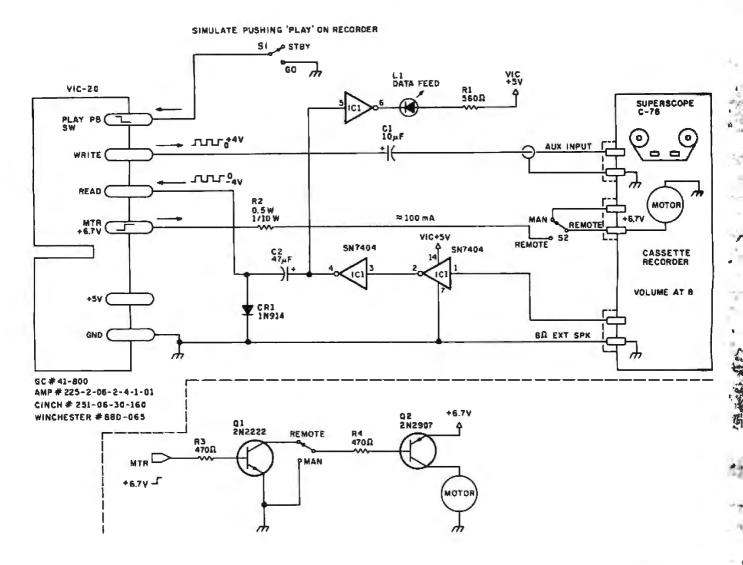

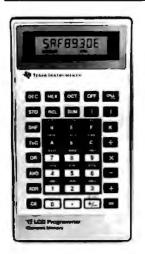

Figure 1: Interface between the VIC-20 and a standard cassette recorder. Although the VIC-20 outputs 0 to +4 V, it seems to prefer a 0 to -4-V input. Switch S1 could be eliminated (see text), but it's safer to include it. Alternate sources for the connector to the VIC-20 are listed; an alternate motor control circuit is also shown.

# New! TI LCD Programmer.

## Hexadecimal and Octal Calculator/Converter.

The brand new tilt-top Ti LCD Programmer can save you hours of work. It was designed specifically for the problems you do, and has features that make it ideally suited for applications in computer programming, debugging, repair and digital logic design.

- Performs arithmetic in any of three number bases OCT, DEC, HEX.

- Integer, two's complement arithmetic in OCT and HEX.

  One's complement capability in OCT and HEX.

  Converts numbers between OCT, DEC and HEX.

  Fifteen sets of parentheses available at each of four processing levels.
- Logical functions AND, OR, EXCLUSIVE OR and SHIFT operate bit by bit on OCT or HEX numbers.

Unisource Electronics has committed to buy Ti's initial production of this unique product. Availability is limited! Order now.

# 15-Day Free Trial.

The best way to evaluate the TI LCD Programmer is to try it yourself - on the Job — for 15 days. If you're not 100% satisfied, simply return it for a full retund. Order now by calling toll-free:

- IEEE 696 S-100

- Two RS232 Serial Ports
- Baud Rates from 50 to 19200 Baud
- Independent Baud Rate for each Serial Port
- 24 Parallel I/O lines (Three 8 Bit Ports)
- Attractive Industrial Quality Enclosure

TEC-86M4 — \$7595.

FOUR USER TEC-86 SYSTEM WITH 1/2 MEGABYTE OF MEMORY

TEC-86W - \$10990.

TEC-86 SYSTEM WITH WINCHESTER
31 MegaBYTE HARD DISK

ONE YEAR WARRANTY

TEC-86M4W — \$12990.

FOUR USER TEC-86 SYSTEM WITH 1/2 MEGABYTE OF MEMORY AND 31 Megabyte Winchester Hard Disk

# **TEC-86 OPTIONS**

- CP/M-86m Single User Operating System
- Additional Memory, 64K and 256K byte increments up to a system total of one full Megabyte
- Languages
   BASIC-86m, FORTRAN-86m, PASCAL-86m, CBASIC/86m, PASCAL/M86m, FORTH, CIS-COBOL and other High Level Languages

- Double sided double density floppy disks (2.4 MB total)
- 31 Megabyte Winchester Hard Disk
- Attractive Wood Grain Desk Top Enclosure
- Rack Mounted enclosure
- Alphanumeric terminals (80 chars x 24 lines)
- Matrix, correspondence quality, letter quality, and graphics printers

# ANALOG TO DIGITAL DIGITAL TO ANALOG DATA ACQUISITION AND CONTROL BOARDS AND SYSTEMS

## APPLE A/D \$695 w/Timer-Counter

ANALOG TO DIGITAL Converter with Timer/Counter
12 Bit Accuracy, 16 Channels, 30 KHz Conversion, Three programmable Timer/Counters to:

Trigger Conversions
Count Conversions
Count External Signals
Count Bus Clock

Options: Programmable Gain; 14, 16 Bit Accuracy; 40, 100, or 125 KHz; Expansion to 256 Channels

# DIGITAL TO ANALOG CONVERTERS

12 Bit Resolution
3 Microsecond Conversion
Jumper Selectable Outputs
±2.5V, ±5V, ±10V, 0 to
+5V, 0 to +10V
Each operates independently
Each DAC holds previous value
until an entire new word
is presented to it
Fully assembled and tested

# \$100 A/D \$765 Analog to Digital Converter with Timer/Counter

12 Bit Accuracy, 16 Channels,
30 KHz Conversion, Five
Programmable Timer/Counters for:
Time of Day
Triggering Conversions
Counting Conversions
Counting External Signals

Interrupting the CPU
Options: Programmable Gain;
14, 16 Bit Accuracy;
40, 100, 125 KHz Conversion;
Expansion to 256 Channels

Circle 378 on inquiry card.

#### OTHER FINE \$100 and APPLE PRODUCTS AVAILABLE, INCLUDING:

ANALOG to DIGITAL CONVERTERS (12, 14, 16 bit accuracy, 30, 40, 100, 125 KHz Conversion rates, 16 to 256 Channels, programmable gain, timer/counters). DIGITAL to ANALOG CONVERTERS (12 bit accuracy, 3 microsecond conversion rate). 8086 CPU Board, I/O Boards 64K/256K Memory Boards, Real-time Video Digitizer and Display. Complete Systems also available for Data Acquisition, Video Digitization, and General Purpose Applications.

# **BYTE Printer Directory**

Curtis P. Feigel Technical Editor

To say that the printer market has blossomed is to make an apt analogy. An immense crop of printers with exciting features has flourished in the last few years. Unfortunately, a handful of thorns is waiting for those who make a hasty grab without carefully examining the field. Only an understanding of the present state of the art and knowledge of the printers available will help the personalcomputer user choose the best printer for an application.

The printer provides an important and common man-machine interface. Recent advances in printer technology allow the use of personal computers in many new ways: producing letters, checks, and even pictures. However, a printer still represents a large investment to most people-sometimes as much as the rest of the computer system. BYTE provides this list of printers and their features to help you get the necessary information.

The newest printers offer standard features that illustrate the progressive thinking of designers and manufacturers, at a low cost that would have been impossible two years ago. Through the use of dedicated microprocessors, new printers provide bidirectional printing, short-line and multiple-font seeking. capability-features that are difficult to implement with mechanical printers. The presence (or absence) of these features is the key to selection of the proper printer.

### **Understanding Printers**

Although a variety of printing technologies is available, the traditional impact printer is still the most common. The other printing concepts find favor in special applications (e.g., if copy must be produced at high speed, an ink-jet system might be used) where special attributes are used to advantage. The following is a description of the printing technologies you will discover in the microcomputer printer market:

Impact: Uses a type element with a raised character that strikes an inked ribbon against the paper, thus transferring the outline of the character to the paper. This is the same concept used in the common typewriter, but manufacturers have added several twists to the idea. In daisy-wheel or thimble-type printers, the complete set of type elements can be removed and replaced as a single unit. This makes it possible to change type fonts (the style of the letters) or install characters not commonly available.

The typical small-computer owner usually opts for an impact printer that uses a dot-matrix type element. This device prints characters made from dots in a closely spaced grid. It is popular because of its flexibility. In many units, the characters' form is stored in memory and can be changed easily. The presence or absence of dots can be controlled by the computer (in some fashion) so that graphs and pictures can be printed.

A rather unusual printer that might be classed with impact types uses a stylus to form the characters (an idea analogous to having a machine that draws with a pencil). The theory is that this system should provide the flexibility of a dot-matrix design with the fully formed characters of a daisywheel-type printer.

Thermal and Electrostatic: Both use a form of the dot-matrix print head. but depend on special paper to create the image, rather than ink from a ribbon. These printers are usually small, allow only 20 or 40 characters on a line, and have few extra features

# Surprising Symmetries in Design and Letterforms . . .

"Kim is the Escher-of-the alphabet. He has created a new art-form that blends beauty and ingenuity, and has made it so clear to us that we can try it ourselves . . . . " Issac Asimov, Author

#### Inversions

A Catalog of Calligraphic Cartwheels by Scott Kim Foreword by Douglas Hofstadter Backword by Jef Raskin

The striking designs that grace the pages of Scott Kim's new book appeal to us as both viewers and readers, for words themselves are the subject of his calligraphic creations. With imagination and care, Kimbends, shapes, and sculpts words into novel and intriguing works of art. Inversions is more than a showpiece, though, as the author details the theories and techniques that lie behind his art and draws parallels to related perceptual exercises in music, linguistic wordplay, and even mathematics.

ISBN 0-07-034546-5 128 pages; softcover \$8.95

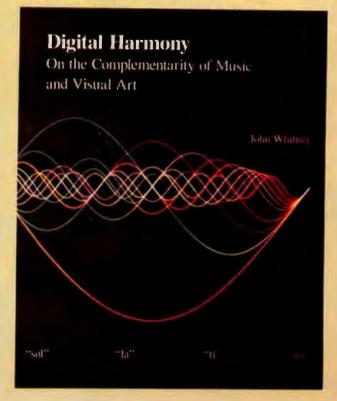

"Scott Kim has perfected a personal art form-one with grace, elegance, subtlety, and surprises." Douglas Hofstadter, author Godel, Escher, Bach: an Eternal Golden Braid

"Scott Kim's Inversions . . . is one of the most astonishing and delightful books ever printed." Martin Gardner Scientific American

"... surs to dezzle and delight anyone to whom writing is dear . . . "

The New York Times Book Review

# A New Frontier Between Sight and Sound . . .

"Here in this beautiful book John Whitney marries art to modern technology. Scenes that previously we would have strained to imagine, Whitney can now show us."

Jearl Walker, Scientific American

# Digital Harmony by John Whitney

On the Complementarity of Music and Visual Art

Digital Harmony is the art of music made visible. Already acclaimed for pioneering the striking visual effects in 2001 and Star Wars, author John Whitney here establishes a new art form in representing the magic of music through computer-generated color graphics. The author also delves into the technicalities of his work, offering to share his methods with others who would explore this field of vast artistic promise. Digital Harmony is the vanguard of what is sure to be one of the most exciting art forms for years to come.

ISBN 0-07-070015-X 240 pages; hardcover \$21.95

"Digital Harmony is a peek into the future when computerization will bridge the gap between art, science, and self-understanding. I loved it.

Saymour Papert Author, Professor Massachusetts Institute of Technology

because of their low cost. They are most popular in calculator-sized computer systems where space is at a premium.

Ink-let: This is actually a controlled spray of ink directly onto paper. Small droplets of ink formed at a nozzle are directed by electrostatic fields to cover the proper areas on the paper. This is a fast way to print whole pages because the inertia of the droplets is far smaller than that of mechanical systems. The system is flexible because the form of each character is computer-controlled.

Laser: Uses a raster-scan system similar in idea to a video display. The laser moves across a sensitized drum. "burning" a row of dots; as each row is completed, the beam moves down to begin the next row. The image is then transferred to paper, just as in a photocopier. Obviously, laser printers contain precision optical and mechanical parts, so they cost tens of

thousands of dollars; but they are very flexible and fast.

Because many of these systems are relatively new, manufacturers have not been able to bring down their cost. Because of this money factor, we will mainly consider the impact, electrostatic, and thermal types, Even the least expensive of today's impact printers has features that set it apart from the teletypewriter that was the common hard-copy appliance 10 vears ago. Here is an explanation of the concepts behind these features:

Print Quality: An obvious consideration for most people and small businesses. The quality of the characters that appear on paper is mostly determined by the printer technology used. Daisy-wheel and thimble-type printers produce fully formed characters that look similar to those produced by typewriters or typesetting equipment. Dot-matrix printers, although usually faster, are not as a rule capable of producing highquality printing (the exception is multipass types that allow their dots to overlap, giving a fully formed look). In dot-matrix printers, the number of dots in the matrix is a good guide to the visual quality of the printing (i.e., a 9-by 14-dot character will probably look far better than a 5by 7-dot one).

Character Sets: They can be an overriding factor if special characters are required. Although the type elements of daisy-wheel and thimble-type printers can be changed manually, many dot-matrix printers can be programmed with alternate character sets; some come with several preprogrammed sets. Almost all printers follow the ASCII (American Standard Code for Information Interchange) convention that assigns each standard character with a 7-bit binary number. Few printers, however, allow all 128 ASCII characters.

A related concern is the font, or style of type, used by the printer, This governs whether parts of the lowercase letters g, j, p, q, and y actually descend below the print line, whether the vertical lines of the characters are slanted, and whether or not the characters have serifs (short lines that extend at an angle from the ends of the main strokes of the letter). Many dotmatrix printers provide a feature to condense or expand the characters horizontally; some even slant or rotate the characters.

Although most printers produce characters that all take the same amount of space, an important feature on high-quality units is proportional spacing. (Perhaps you have noticed that typesetting-such as is used in magazines, newspapers, and books-produces characters that have a variety of widths.) This contributes much to the look of a printed page.

Speed: Many printers include features that allow them to print characters at a high rate. This may be as simple as a character set that is draft-quality (the printer doesn't spend much time making the character look pretty).

# The Logo Language is Here for the Apple II

TO SQUIRAL :ANGLE :DISTANCE
IF :DISTANCE > 200 THEN STOP
FORWARD :DISTANCE
RIGHT :ANGLE
SQUIRAL :ANGLE :DISTANCE + 3
END

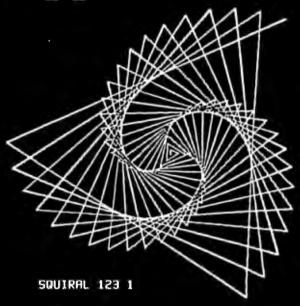

Terrapin, the Turtle Company, brings you the Terrapin Logo Language for the Apple II with Turtle graphics, now ready for immediate delivery.

The Terrapin Logo language is a sophisticated and powerful language that is easy for anyone to use. Although originally intended for children, the Logo language is one that the most advanced programmers will enjoy using too. It includes many features common to artificial intelligence research languages permitting programs of great power to be written quickly and easily. Writing comparable programs in other languages is usually much more difficult and time consuming.

The Turtle graphics is fun and easy. With simple commands such as FORWARD, RIGHT, and PENUP you can draw in six hi-res colors. In just a few short sessions you can learn to create figures more complex than the one above whether you know how to program or not.

But the Terrapin Logo language is more than just a graphics language. It supports:

- list structure, allowing easy manipulation of words (strings) and lists
- user defined procedures which can be used exactly as if they were part of the language.
- fully integrated screen editor for procedures and text
- · floating point and integer arithmetic
- a total of 120 primitives (commands) including 30 graphics commands
- recursion
- assembly-language interface capability

The Terrapin Logo language was developed by the Artificial Intelligence lab at the Massachusetts Institute of Technology. Terrapin is now authorized by MIT to distribute the results of its 12 years of research to you. To provide quality support for the language, Terrapin has assembled a team that includes two of the three authors who developed the Logo language for the Apple II at MIT, as well as Dr. Feurzeig, the originator of the Logo language.

Every copy of the Terrapin Logo language comes with complete documentation. To run the language, a 48K Apple II with a 16K RAM card or a language card, and one disk drive is required.

Terrapin also offers the robot Turtle, and the following books: Turtle Geometry, Special Technology for Special Children, Mindstorms, Katie & the Computer, and Apple Logo from Byte Books.

Suggested retail price: \$149.95 To order or for more information, call or write:

**Terrapin. Inc.** 678 Massachusetts Avenue Cambridge, MA 02139 (617) 492-8816 However, two logical concepts are important to the speed of any printer: bidirectional printing and short-line seeking. A printer that does bidirectional printing does not waste time moving the print head from the end of one line, at the right of a page, to the beginning of the next line at the left. It simply prints the next line backward, beginning at the right, A short-line-seeking printer skips over multiple spaces at a higher than normal speed and slows when the print head is located at the first printable character.

Forms: Paper that the printer will accept is usually limited to one or two types. A large amount of computer printouts are done on fanfold paper. However, cut sheets are preferred for correspondence and reports. Some printers accept only roll paper, as used on adding machines. Forms controls that allow the printer to automatically find the top of the next fanfold page, and feeding mechanisms that load the printer with a single sheet of paper, are also available.

(Fanfold continuous paper is separated into sheets by perforations along the top and bottom of each "page." A series of holes is provided along each margin for a tractor to move the paper vertically through the printer. Fanfold paper is available in

a variety of styles and widths, including preprinted forms such as invoices and checks.)

Following is a listing of printer manufacturers and their products. Where possible, the information has been taken directly from the maker's literature. But please remember this caveat: a manufacturer may emphasize one feature and neglect to mention other features. Although we have made every attempt to keep the specifications accurate and up-to-date, errors do occur. Also, keep in mind that manufacturers reserve the right to alter specifications without notice.

# INTRODUCING CALCSTAR.

# ANOTHER INDISPENSABLE BUSINESS PROGRAM FROM MICROPRO, THE WORDSTAR

Presenting CalcStar—another standardsetting software product in the WordStar tradition.

CalcStar is MicroPro's new electronic spread sheet and financial modeling program—a sophisticated, yet easy to use, calculating and planning tool for CP/M\*based computers.

The ultimate electronic spread sheet.
CalcStar calculates solutions to complex numerical problems in business and finance.
Helps you make budget plans and sales forecasts with greater speed and accuracy. And projects figures into the future to answer the "what if" questions you face in business.

And CalcStar also has a unique MicroPro advantage: It joins with WordStar to combine spread-sheet and word-processing capabilities in

several powerful ways.
CalcStar software eliminates the need to use ledger paper ever again. It turns your video screen into a "window" on a giant electronic ledger sheet, with up to 600 entries arranged the way you want. Then, by inserting formulas into CalcStar, you create financial models that simulate the future numerically. And predict the outcomes of your business decisions.

When you notice what CalcStar can do for your business, you'll wonder how you ever got along without it. (If you're now a WordStar user, you probably already know the feeling.)

The MicroPro bonus. Like WordStar, CalcStar is packed with innovative features that make it versatile and easy to use. Features like Automatic Forms Mode, which lets an inexperienced user enter data into a spread sheet quickly and with less chance of error.

CalcStar's greatest innovation is its ability to join with WordStar. Which means, for example, you can use WordStar's printing options, like boldface and underlining, to dress up financial documents. And you can insert sections of CalcStar's spread sheets into your WordStar documents.

This kind of flexibility should come as no surprise if you're already familiar with the MicroPro software family—a line of programs designed to work together to multiply your problem-solving power. Visit your MicroPro dealer to find out just how big a difference all our products can make in your business. We predict you'll discover it's not just CalcStar or WordStar that's indispensable. It's MicroPro.

A glance at CalcStar features
Runs on CP/M version 2.0 or above, with 80column screen, addressable cursor, and at lease
48K memory, 56K or more is recommended for
fullest utilization

Highly user friendly: Call up full screen of help or use help menu. WordStur-like cursor commands. User's guide shows you the basics. Install from menu OR a WordStur file.

Stores formulas and formats along with data, for convenience and less chance of error.

Math functions include average, minimum, instalmum, logarithms, exponents, and regression malusis.

THAT MEANS BUSINESS

# MACRO OPERATIONS FOR MICRO SYSTEMS

# Microcomputer Disk Techniques by Paul Swanson

とはない

Rarely has so much useful information been presented as clearly and logically as it is in Microcomputer Disk Techniques. The author shows how sophisticated methods used on larger computers may be implemented on a personal computer. Building from a basic introduction, Paul Swanson goes on to detail randomaccess, sequential, and key files, parameter-driven subroutines, and, finally, the art of programming itself. This volume will help both novices and experienced computer users squeeze every bit of use out of a disk system.

Price \$15.00 ISBN 0-07-062582-4

# Microcomputer Operating Systems by Mark Dahmke

A uniquely helpful volume, Microcomputer Operating Systems details the structures and capabilities of the operating systems that link the computer user to the hardware itself. The author explains small systems and their monitors, larger systems with terminals and disk storage, and the function of command languages. Data and memory management, multiprocessing, user interference, multiuser environments, and system design are among the more specific topics included in this comprehensive guide. Two particular operating systems-CP/M and Unix-are covered in appendices.

COMPUTER CAPACITY. By Melvin J. Strauss. 288 pp., tables and charts. The key purpose of the book is to provide both senior management and DP practitioners with a methodology for identifying and quantifying issues of capacity and demand within the data center without becoming entrapped by without becoming entrapped by 582317-9

BUILD YOUR OWN 280 COMPUTER.

By Steve Ciarcia. 330 pp., diagrams, softbound. Written for people who don't need an introductory electronics handbook. Its admira-bly achieved objective is to present a practical, step-by-step analysis of digital computer architecture and the construction details for a complete and functional microcomputer.

DATA STRUCTURES USING PASCAL. By Aaron M. Tenenbaum and Moshe J. Augenstein. 544 pp., illus. With its emphasis on structured design and programming techniques, this definitive work takes you on a trailblazing journey through Pascal. Separate chapters are devoted to the stack, recursion, oueues and lists. Pascal list programming the pascal state of the pascal state queues and lists, Pascal list pro-cessing, trees, graphs and their applications.

582230-X

HOW TO BUILD YOUR OWN WORK-ING MICROCOMPUTER. By Charles K. Adams. 308 pp., 214 illus. and tables. Everything you need to know to build your own microcomputer with a handful of chips! The author takes you through the hardware... assembly and running of the sys-tem... and details the instruction set and mechanics of program-ming.

582267-9

APPLE PASCAL: A Hands-On-Approach. By Arthur Luehrmann & Herbert Peckham. 426 pp., spiral-bound. Finally, a how-to-use-PASCAL book for Apple computer users that makes a complex language as easy as (forgive us!) applesauce. Takes you from "total ignorance" all the way up to very impressive competence in the use of that rather complex language,

MICROPROCESSORS/MICROCOM-PUTERS/SYSTEM DESIGN. By Texas Instruments Learning Center nexas instruments Learning Center and the Engineering Staff of Texas Instruments, Inc. 634 pp., illus., outsized 7¼ x 10¼ format. The book takes you through the development of memory-to-memory architecture, shows you the compo-nents, and details programming methods and techniques. 837/58XB

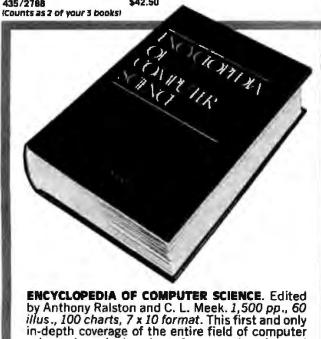

(Counts as 2 of your 3 books)

MINICOMPUTER SYSTEMS: Organization, Programming, and Applications. By Richard H. Eckhouse, Jr. and L. Robert Morris. 2nd Ed., 491 pp., illus. Updated, revised, and expanded, this is a book for every systems programmer, systems designer, computer scientist, and application specialist who wants to know more about microcomputer hardware. about microcomputer hardware, software, and design. 787/026

AUTOMATIC DATA PROCESSING HANDBOOK. Edited by The Diebold Group. 976 pp., 269 illus. Written by a staff of internationally recognized authorities on ADP, this comprehensive handbook explains systems, programming and the languages, communications processes, and the design and installation of today's computers. \$49.95 168/075B

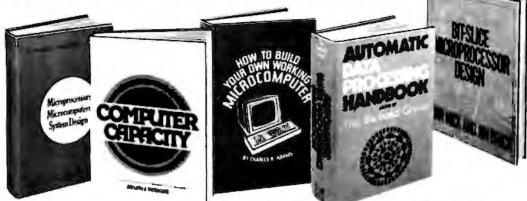

(Counts as 2 of your 3 books)

SOFTWARE DEBUGGING FOR MICROCOMPUTERS. By Robert C. Bruce. 351 pp., illus. Takes you through the fundamental methods for finding errors, glitches, and faults in programs ... goes on to techniques for tracking down and exterminating program bugs ... then combines these techniques into a complete debugging plan.

science in a single volume is comprehensive and

EXPERIENCE!

THE DEVIL'S DP DICTIONARY. By Stan Kelley-Bootle. 160 pp., softbound. This devilishly clever little book is guaranteed to fill anyone who has ever slaved over a hot terminal with savage delight. Some 500 computer words and terms are misdetined, from abacus to your pre-gram.

340/226 \$7.50

MICROCOMPUTER INTERFACING. By Bruce Artwick. 352 pp., 117 illus. In this up-to-date, complete design guide you'll find the detailed descriptions and explanations necessary to enable you to select, build, and interface microcomputer systems to virtually all applications. Advanced interface devices and methods are thoroughly examined and illustrated. 789/435 \$24.95

PERSONAL COMPUTING: Hardware and Software Basics. Electronics Book Series. 224 pp., 175 illus.. 8½ x 11 formal. Gives you comprehensive guidance to the present state of the art in personal computers—an overall survey of the technology and methods available to perform various tasks, facts about the work others are doing—and just how they are doing it.

1/514 \$24.5

PROGRAMMING AND INTERFAC-ING THE 6502 — With Experiments. By Marvin L. De Jong. 414 pp., heavily illus., softbound. This guide not only teaches you all you must know about programming and interfacing the 6502, but it also carries you to a high level of understanding and proficiency quickly and painlessly. 582080-3

Z80 USERS MANUAL. By Joseph Carr. 326 pp., with diagrams, charts and tables. Takes you through every opportunity the ZAP can offer. It covers Z80 pin definitions, CPU control signals, support ships, interfacing peripherals, and much more. It also includes a 177-page Z80 instruction set so you can study the instructions on a one-by-one basis.

582336-5 \$18.95

Programming, and Troubleshooting. By W. H. Buchsbaum and R. Mauro. 335 pp., 338 illus. Information you need to design, program, and troubleshoot electronic games is right here in this widely popular handson guide.

Why YOU should join now!

 BEST AND NEWEST BOOKS IN YOUR FIELD—Books are selected from a wide range of publishers by expert editors and consultants to give you continuing access to the best and latest books in your field.

BIG SAVINGS — Build your library and save money too! Savings ranging up to 30% or more off publishers' list prices — usually 20% to 25%.

BONUS BOOKS — You will immediately begin to participate in our Bunus Book Plan that allows you savings of between 70 % — 80 % off the publishers' prices of many professional and general interest books!

■ CONVENIENCE —12-14 times a year (about once every 3-4 weeks) you receive the Club Bulletin FREE. It fully describes the Main Selection and alternate selections. A dated Reply Card is included. If you want the Main Selection, you simply do nothing—it will be shipped automatically. If you want an alternate selection—or no book at all—you simply indicate it on the Reply Card and return it by the date specified. You will have at least 10 days to decide. If, because of late delivery of the Bulletin you receive a Main Selection you do not want, you may return it for credit at the Club's

As a Club Member you agree only to the purchase of 3 books during your first year of membership. Membership may be discontinued, by either you or the Club at any time after you have purchased the 3 additional books.

Other McGraw-Hill Book Cluba:

Accountants' and Controllers' Book Club • Architects' Book Club • Chemical Engineers' Book Club • Civil Engineers' Book Club • Electronics and Control Engineers' Book Club • Mechanical Engineers' Book Club

# **NO LEADING IMPORT IS HIGHER** THAN SUBARU IN OWNER LOYALTY.

Subaru owners have a lot in common. Including the habit of trading in one Subaru for another Subaru."

If that isn't the best endorsement any car can earn, we don't know what is.

One good reason people stick with Subaru is for its day in, day out reliability. The last time Road and Track surveyed Subaru owners, they reported "... one of the most trouble-free cars we ever surveyed."\*\*

Another reason is the wide choice of models. There's the sporty 2-door hardtop. The luxurious 4-door sedan. The versatile hatchback. And the roomy station wagon.

Every Subaru has full-time front wheel drive. In addition, three of our models — Hatchback, Station Wagon, Brat — are also available with On Demand Four Wheel Drive. Which is four wheel drive at the flick of a lever. Without stopping.

And stopping is exactly what you can't do sometimes.)

Some attractive options we offer are the Hill-Holder™ (a device on our manual

transmission models' that keeps you from drifting back after stopping on steep hills), as well as power windows and power steering, AM/FM stereo, cassette deck, cruise control. All the wonderful unnecessities of driving.

Plus one huge necessity: outstanding gas mileage. Our cars are designed to squeeze every last mile out of every last drop. Year after year.

Just remember that it's quite easy to find an inexpensive car. The trick is to find one that stays that way.

SUBARU.

# PRINTERS & ACCESSORIES

### Common Features of the MX80, MX80FT & MX100 Printers

- 80 characters per second Replaceable print head by user User programable from BASIC Bi-directional logic seeking printhead 96 ASCII characters
- Programable tabs (vert./horz.) Cartridge ribbons Self-lest mode
- fractor/pin feed paper flow
- Extreme reliability
  12 type fonts under software control
  9x9 & 9x18 matrix

- Programable form leeds Compressed/expanded letters Parallel interface standard
- Double strike & emphasized modes

MX80. The Printer that started it all. All of the above features plus extreme case of use Complete TRSSO block graphics set as well as user selectable infernational symbols. Gives correspondence quality printing in several user selectable modes. Dip switch plus may be set for dedicated applications. Complete forms programability from BASIC software.

MXSOFT .All the features of the MXSO but with FRICTION feed as well for the use of single sheets of paper or roll paper. An exceptional buy for the user needing the single sheet capability. In the compressed mode 132 characters can be printed across the width of a page which means it can be used for any printouts that normally need a 15 inch wide printer.

MX100 An exceptional printer with a extra quiet printhead and extra heavy duty construction for the intense use of a business environment. Does not have the TRS50 graphic blocks but comes standard with Bit-Image graphics which allow the user control of individual dots for dasigning specialized graphs, symbols, etc. A best buy for business use.

MX70 ... For the budget minded a secollent entry level printer it has most all of the features mentioned above including Bit-Imagegraphics in place of the TRS80 graphic blocks set. The Printer is unidirectional unity. Expandable laxt can be printed but not compressed Only single density printings is supported on the MX70 An inexpensive neary duty printer.

Model II 64K

The best buy for small business needs and yet completely expandable as your business grows. Easy to use for the beginning operator. We have in STOCK all accessories and disk expansions as well as printers and software IMPORTANT: We also have CP/M for the Model II plus a large amount of support software. All of these items at our fabulous DISCOUNT prices. We ship from DFW by air and fully insured for FAST safe délivery

# HARD DISK SUPPORT FOR THE MODEL II... NOW!

TEXAS COMPUTER SYSTEMS

Offers Lowest Prices on

5. 10 or 20 Megabytes (up to 80 Megabytes) for the Model if Full CP/M support Also full support for TRSDOS and all TRSDOS software Multiple computers (multi-user) can be connected to these hard disk systems and can share and access common data bases under both CP/M and TRSDOS. The same common data base can even be accessed simultaneously by several users. We use top of the line CORVUS Hard Disk Dirves which have a proven trade record and have outsold all of their competitors combined in the microcomputer market Model I and III are also supported by these Hard Disk Systems. \$Call for our LOW prices

# CUSTOM SOFTWARE FROM TCS

Completely integrated BIMARY SEARCH TREE programs now available. This series of programs fully implements the B-TREE structures including INSERTION, DELETION, EDITING & TRAVERSAL. No more sorting or long data file searches and yet files can be larger than memory. Duplicate keys are fully supported. Files can be retrieved in sorted order via B-TREE Traversal. Each of the programs come with fully commented source code so that you can use the modules in your own programming. A Screen oriented input routine is also included in each module. The following B-TREE programs are now available and each includes all of the mentioned modules and full documentation:

# EPSON PACK A Utility Soft-ware package for MX80 & 80FT.

WAR6/CMD will send all printer commands from DDS. BIGLETT/BAS prints large Graphic Letters. EPSON/SUB merges with BASIC programs allowing 2 letter mneumonic commands to be sent to printer JKL Patchs allow JKL in NEWDOS 80 10 & NEWDOS 21 to send graphics properly DEMD/BAS tutorial program of use of printer LABEL/BAS custom label making program with graphics DEF program of use of primes tabect of scassion label making program with graphics DEF-STATE/SUB allows one word BASIC com-mands for confered titles. Itiles with borders, etc. A great program package for EPSON fans SPECIAL DEAL \$24.95 with printer \$34.95 separately Specify Model 1 or fit disk only

**EPSON PACK 2 - GRAFTRAX** version for MX80, 80FT & MX100 This package includes updated versions of modules to original Epson Pack A screen oriented BIT IMAGE GRAPHICS generator unitty is provided Creale your special characters, symbols, etc directly on your monitor and then send to printer Printput inmonitor and then send to printer Printoit in-cludes code to generate graphics and will save needed code as BASIC program line to disk. Then MERGE these into your BASIC pro gram. Also demo programs showing use of Bit-Image graphics. Full documentation INTRO SPECIAL: 324.85 with printer or GRAFTRAX, 534.95 separately, \$7.50 for update of old Epson Peck.

ZAP3 - Direct read/write access to any TRSDOS 1.2 or 1.3 sector. Disable Passwords & access levels. Sell prompting. Modify any sector in HEX or ASCII. Includes many patches to TRSDOS 1.2 & 1.3. Also COPYIT to allow backups of SCRIPSIT, VISICALC, etc. Just... \$24.95. SDIR - Super directory manipulation for TRSDOS 12 or 1.3. Alpha 4 column directory lines space. Display a range of programs by extension. Change name and date. Generale report of location of any program on diskette Just... \$14.95

SPECIAL DEAL: Buy ZAP3 & SDIR logether for .... \$29.95

# CASIO ELECTRONIC ORGANS have arrived!!!

The lantasic CASID Electronic Organs are here in force. Fully equal to any \$2000 traditional Organ with dozens of exciting NEW features not seen on other musical instruments: CASITONE CT—403 (25 instruments,16 rythms,chord memory,etc.)..... CASITONE CT-701 (programable, beroode reader,51 keys,etc.,etc.).....

### MODEL 111 DISK

We use the highest quality liberglass CONTROLLES SOARDS with double sided CONTROLLER BOARDS with double sided glass epoxy board and gold plated contacts in our ICS systems. The linest switching POWER SUPPLY available is also provided the atuminum MOUNTING MAROWARE has stofted holes for easy installation of the drives and includes all the power and data cables necessary to install the controller, drives and power supply.

Our DISK DRIVES are made by Tandon the same company hat makes the drives used by Radio Shack. These drives are 40 track, double density 5 milksecond stepping rate and are fully burned in for 48 hours. These drives have the same specifications as the drives used by Radio Shack. No soldering or modifications to existing circuitry is necessary. The following kits are available.

KIT	1	Controller, Power Supply & Mounting Hardware	\$379
		Controller, Power Supply, Hardware & 1 Disk Drive	
KIT	3	Controller, Power Supply, Hardware & 2 Disk Drives	\$819
KIT	4	One Tandon Disk Drive (bare drive only)	\$219
KIT	5	15K of High Quality TCS Memory chips	\$49.95
KIT	6	32k of High Quality TCS Memory chips	\$79.95

### MODEL III 48K 2 DISK DRIVES KIT....\$1753

Yes, you read it right. A complete 48k 2 Disk Drive Model (ii) computer system for just \$1753. Here's what you get one TRS80 Model (ii) 16k Computer in factory carrion, one CONTROLLER, POWER SUPPLY & HARDWARE kit (kit 1), two Tandan Disk Drives and 32k of TCS Memory. You also receive several important extract that make this a complete auper kit. These extres include a complete flustrated instruction and trouble shooting immund, a TRSD08 1,3 operating system and manual and a special diagnostic Diskette for testing the unit after you have put it together. The only tool necessary will acrewit over EVERYTHING is included in this kit and the price is right. \$1753

MODEL III 48k 2 DISK DRIVES

# An Underline Filter for Matrix Printers

Adam Reed Center for Human Information Processing UCSD C-009 La Jolla, CA 92093

Although matrix printers such as Digital Equipment Corporation's Decwriter III have the advantages of relatively high speed and fairly low cost, they do have an important disadvantage when it comes to printing manuscript copy. By convention, some items in manuscripts (the names of cited journals, for example) are underlined in the text. Matrix printers, if they underline at all, do so by overprinting the bottom line of each "underlined" character, Besides being slow and aesthetically unappealing, this type of "underlining" makes the text nearly illegible.

Fortunately, many matrix printers, including the Decwriter, can achieve half-line vertical spacing. The program in listing 1 sets this option, converts the underline characters to minus signs (which are the same length as underline characters on most matrix printers, including the Decwriter), then moves them onto a separate line to be printed under the corresponding line of text. The result is clear, fast, legible underlining. At the end of the text file, the program restores the Decwriter to normal vertical spacing.

The program in listing 1 is written in C to act as a "filter" under the Unix operating system. Its input is a text file with standard underlining, and its output is the input to the matrix printer. It can be translated readily into other languages, such as BASIC or FORTRAN, for use with other operating systems and matrix printers.

## Listing 1.

1 /\* This program improves Decwriter underline handling by using a line buffer \*/
2 /\* and may also be used to change, temporarily, the dw3's horizontal pitch . \*/

# COSTING YOU.

It's really quite basic: time is

money.

And BASIC takes a lot more time and costs a lot more money than it should every time you write a new business software package.

Especially when you could speed things up with

dBASE II.

# dBASE II is a complete applications development package.

Users tell us they've cut the amount of code they write by up to 80% with dBASE II.

Because dBASE II is the high performance relational

database management system for micros.

Database and file handling operations are done automatically, so you don't get involved with sets, lists, pointers, or even opening and closing of files.

Instead, you write your code in concepts.

And solve your customers' problems faster and for a lot less than with BASIC (or FORTRAN, COBOL or PL/1).

# dBASE II uses English-like commands.

dBASE II uses a structured language to put you in full control of your data handling operations.

It has screen handling facilities for setting up input

and output forms.

It has a built-in query facility, including multikey and sub-field searches, so you can DISPLAY some or all of the data for any conditions you want

You can UPDATE, MODIFY and REPLACE entire

databases or individual characters.

CREATE new databases in minutes, or JOIN data-

bases that already exist.

APPEND new data almost instantly, whether the file has 10 records or tens of thousands.

SORT the data on as many keys as you want. Or INDEX it instead, then FIND whatever you're looking for in seconds, even using floppies.

Organize months worth of data in minutes with the built-in REPORT. Or control every row and column on your CRT and your printer, to format input and output exactly the way you want it.

You can do automatic calculations on fields,

records and entire databases with a few keystrokes, with accuracy to 10 places.

Change your data or your entire database structure without re-entering all

your data.

And after you're finished, you can protect all that elegant code with our runtime compiler.

# Expand your clientbase with dBASE II.

With dBASE II, you'll write programs a lot faster and a lot more efficiently. You'll be able to write more programs for more clients. Even take on the smaller jobs that were out of the economic question before. Those nice little foot-in-the-database assignments that grow into bigger and better bottom lines.

# Your competitors know of this offer.

The price of dBASE II is \$700 but you can try it

free for 30 days.

Cali for our Dealer Plan and OEM run-time package prices, then take us up on our money-back guarantee. Send us your check and we'll send you a copy of dBASE II that you can exercise on your CP/M system any way you want for 30 days.

Then send dBASE II back and we'll return all of your

money, no questions asked.

During that 30 days, you can find out exactly how much dBASE II can save you, and how much more it lets vou do.

But it's only fair to warn you: business programmers don't go back to BASIC's.

Ashton-Tate, 9929 Jefferson, Los Angeles, CA 90230. (213) 204-5570.

# Now for \$5995 you can own a professional quality small business computer.

It seems like everybody's selling computers these days. Personal computers. Hobby computers. Computers that play games. Computers with incredibly low prices.

But if you're interested in a professional quality small business

computer that can stand up to all the punishment your business can dish out, the bargains start at \$5995.

That's the price of Digital's DEC mate Work Processor™ system. It includes the Work Processor itself, a BASIC operating system that lets you write your own programs, plus two of our most popular software packages. One for financial modeling, and one for mailing lists. You also get a printer. That's everything you need to start managing your business more efficiently.

For an extra \$500, you can even get the software to do word processing. And other software packages are reasonably priced, too.

So if you're looking for bargains, start with the Work Processor from Digital. And for just \$5995, you can run your small business like a big business.

\*Destination charges not included.

# Look what the Work Processor system can do for you!\*\*

# **Programming Quickies**

# A Shape-Drawing Program for Diablo Printers

Thomas D. Brock 1227 Dartmouth Rd. Madison, WI 53705

The Diablo Model 1620 and 1640 daisy-wheel printers have a lot of nice graphics features that aren't generally used. After working with high-resolution graphics shape tables on the Apple II computer, I decided to write a shape-list generator for the Diablo in BASIC. (We call this construct a "shape list" to distinguish it from the binary-coded Apple shape tables....RSS)

The program I devised permits the definition of a variety of shapes and the printing of these shapes at any chosen size. No attempt has been made to write a complete graphics package, but the shape-list generator could easily be incorporated into a larger program. Changing the position of printing on the paper and rotating the shapes could also be added.

Each shape is defined in terms of the instructions needed to print it on the paper. The move and print instructions are coded into character strings that are interpreted by a series of subroutines. The program can be used on any BASIC interpreter that supports string variables and permits dissection of strings into substrings.

The details of the Diablo codes for graphics can be found in the Diablo user's manual. The printer is placed into graphics mode by sending to it an Escape, "3" sequence and is taken out of graphics mode through an Escape, "4" sequence. When in graphics mode, carriage movement is not tied to character printing, but space and backspace cause carriage movements of 1/60 inch forward and backward, respectively. Also the linefeed character causes paper-feed movement of 1/48 inch, and "negative linefeed," initiated by sending an Escape, linefeed sequence, causes paper movement of 1/48 inch in the opposite direction. Other paper-movement commands such as vertical tab, formfeed, and margin control remain unchanged.

Thus, to print a horizontal line, it is necessary to send an alternating sequence of periods (decimal ASCII code 46) and spaces or backspaces; the length of the line in inches will be 1/60 times the number of periods printed. To print a vertical line one sends an alternating sequence of periods and linefeeds, or negative linefeeds: the length

of the vertical line in inches will be 1/40 times the number of periods printed. To move the print head without printing a line, the print-head-movement command is sent without the corresponding periods.

The program in listing 1 is fairly self-explanatory. The shapes are stored as character strings in lines 1000 to 1200, and could, of course, also be input just before starting execution by a change in line 20,

# \$389.

Made by Seikosha, AXIOM's new GP-100 is the finest printer a little money can buy. It uses standard 8-1/2 x 11 paper and has AXIOM's fabulous graphics interfaces for Apple, TRS-80, Atari, PET, HP and more! See the GP-100 at your AXIOM dealer today!

# for TRS-80 Models I & III AND NOW, CP/M'!

SuperSoft LISP allows the TRS-80 to become a complete Artificial Intelligence laboratory! It is the tool that takes you to the frontier of Computer Science.

The SuperSoft LISP is a complete and full implementation. (It is NOT a subset!) It contains an efficient garbage collector which optimizes the usage of user RAM, and supports the TRS-80 graphics. Below are some features:

- Runs in 16k level II (with only 6K overhead)
- Fully implements atom property list structure.
- PROG is supported.
- FUNARG device is implemented.
- Efficient garbage collection.
- Complete with LISP editor and trace.
- Allows complete range of single precision numeric data.
- Works with old as well as new ROMs.
- Contains 97 functions.
- Sample Programs.

The LISP package is supplied on tape or discette and with a complete user manual.

TRS-80 TRADEMARK TANDY CORP

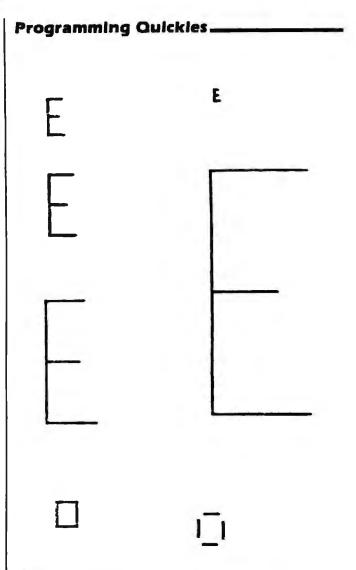

Figure 1: Sample printout produced on a Diablo printer of the 1600 series with the program of listing 1

The shape string selected is interpreted in the subroutine at line 5000. If an X is present, it means move without printing, an R means move right, an L means move left, a U means move up, and a D means move down. The number after the move instruction provides the relative amount of movement, which is stored in the variable M.

The actual amount of movement depends upon the size of the shape, selected at line 22. The whole shape is quickly printed by the program. Printing is then stopped so that another instruction can be fetched, if desired, A typical printout is shown in figure 1.

Although the Diablo printer has several different ways by which graphics can be created, the shape-list program provides a simple means to make nonnumerical drawings. By permitting the selection of any desired size (and position on the paper, with routines easily added) some useful tasks can be performed. Because of the simplicity and shortness of the program, it can be run with virtually any BASIC interpreter that supports string functions.

# Four Implementations of Pascal

Thomas H. Woteki FEROX Microsystems Inc. 1701 North Ft. Myer Dr. Suite 611 Arlington, VA 22209

> Paul A. Sand Sandpiper Software 10 Hemlock Forest Dover, NH 03820

The programming language Pascal was developed in the late 1960s and early 1970s by Niklaus Wirth. According to Wirth, principal aims were to create a language suitable for teaching and facilitating disciplined and systematic programming and to develop reliable and efficient implementations of the language on computers then available. Here, we review four implementations of Pascal designed for today's microcomputers. Three of these-Pascal/M, Pascal/MT+, and Pascal/Z-are designed to operate under the CP/M operating system: the fourth, Softech's UCSD Pascal, is an entire operating system designed to run on a variety of microcomputers, including Z80-based machines.

Wirth's Pascal, or standard Pascal, is defined in the Pascal User Manual and Report (K. Jensen and N. Wirth. New York: Springer Verlag, second edition, 1974) and is the common basis for the implementations considered. Each implementation is essentially a superset of this standard and incorporates features of the proposed International Standards Organization (ISO) draft proposal for the language, ISO/DP 7185. The ISO proposal extends Wirth's Pascal.

# Differences in Implementations

The four implementations of Pascal described here differ chiefly with respect to these kinds of features:

Extensions to the ISO standards.

- Nature of code generated, whether machine code that can be directly executed in the target processor, or P-code (pseudo-machine code, also called intermediate code) that must be translated into machine code by an interpreter when the program is run.
- e Types and variety of input and output primitives (intrinsic procedures for input and output).
- Support for separate compilation of modules or libraries of procedures and data structures (so that the separate modules can be called and used by other programs, eliminating the need to rewrite commonly used procedures).
- Support for memory overlays (an overlay is a section of code brought into main memory in an area previously occupied by another section of the same program). An overlay reduces the amount of main memory necessary for a program to run.
- Ease of use. The nature of the code generated and the steps required to generate it do much to determine ease of

We will describe each of the four implementations of Pascal and then examine the way they handle some of the Pascal features just mentioned. Some of the terms used to describe programming languages are defined separately in the text box "Programming Language Terms" on page 354.

# Tired Of Your GENERAL LEDGER?

# VERSA-LEDGER

- \* THE ULTIMATE PERSONAL CHECK REGISTER
- \* A PROFESSIONAL ACCOUNTING SYSTEM
- \* A PERSONAL FINANCIAL MANAGER
- \* A SMALL BUSINESS ACCOUNTING SYSTEM
- \* A COMPLETE GENERAL LEDGER

FOR YOUR TRS-80 MODEL 6. M. HU. - 10 DE COMPUTER - APPLE 10 - 0.B.M. - MEROX - ATARI ALL MAINTENENTE COMPUTERS

# HOW IT WORKS . . . .

<u>VERSALEDGER</u> is a complete accounting system that grows as you or your business grows. To start, your VERSALEDGER acts as a simple method of keeping track of your checkbook. Just enter your check number, date and to whom the check is made out to. As you or your business grows, you may add more details to your transactions . . . . account number, detailed account explanations, etc.

- VERSALEDGER can give you an instant cash balance at anytime. (IF YOU WANT IT TO)
- VERSALEDGER can be used as a small personal checkbook register. (IF YOU WANT IT TO)
- VERSALEDGER can be used to run your million dollar corporation. (IF YOU WANT IT TO)
- VERSALEDGER prints checks. (IF YOU WANT IT TO)
- VERSALEDGER stores all check information forever. (IF YOU WANT IT TO)
- VERSALEDGER can handle more than one checkbook. (IF YOU WANT IT TO)
- VERSALEDGER can be used to replace a general ledger. (IF YOU WANT IT TO)
- VERSALEDGER HAS AN ALMOST UNLIMITED CAPACITY.

(300 checks per month on single density 51/4" disk drives such as the TRS-80 Model-I)

(500 checks per month on the Apple II)

(2400 checks per month on the TRS-80 Model III)

(6000 checks per month on the TRS-80 Model II)

(3000 checks per month on single density 8" CP/M)

- VERSALEDGER will soon have an add-on payroll package. (IF YOU NEED IT)
  - CAN BE USED WITH 1 or MORE DISK DRIVES -

# VERSALEDGER HAS BEEN CREATED WITH THE FIRST TIME COMPUTER USER IN MIND

# Pascal/Z

Ithaca Intersystems' Pascal/Z is a compiler for the Z80 processor and is designed to run under Digital Research's CP/M Version 2.2 operating system. Pascal/Z requires 56K bytes of RAM (random-access memory), including the space used by the operating system and at least one disk drive. According to the developer, the Pascal/Z compiler generates optimized macro-assembler code that is capable of being written into a read-only memory device (ROM-able) and capable of being interrupted and later reentered at the point of interruption (reentrant).

To execute a Pascal program with Pascal/Z, you must compile the source text, assemble the resulting Z80 assembler code, and link the resulting code file to a runtime library. The linked code is then ready for execution under CP/M.

The Pascal/Z compiler, assembler, and linker are all part of the Pascal/Z package, retailing for \$395.

# Pascal/M

The Pascal/M compiler, made by Sorcim of Santa Clara, California, is a one-pass compiler that produces a P-code file as output. Pascal/M was designed to run under CP/M 2.0, MP/M, Cromemco CDOS, and Oasis operating systems on Z80 or 8080/8085 machines. Pascal/M requires 56K bytes of memory and one disk drive. The Pascal/M package includes the compiler, a run-time library, and a run-time interpreter. It costs \$225. (Our thanks to Digital Marketing of Walnut Creek, California, for making a copy of Pascal/M available to us.)

Pascal/M is identical to UCSD Pascal—in all its extensions to standard Pascal—with two important exceptions. The similarity includes the naming and definition of strings and the built-in procedures for handling them, along with low-level, byte-oriented procedures for moving information from one part of memory to another.

The important differences between Pascal/M and UCSD Pascal are in the operating system and library facilities. Pascal/M operates under CP/M, but UCSD Pascal is an independent operating system. Pascal/M has no apparent facility for separate compilation of libraries of procedures; UCSD Pascal is well endowed in this regard. Pascal/M allows memory overlays.

# **UCSD Pascal**

UCSD Pascal, originally developed at the University of California, San Diego, is supplied by Softech Microsystems Inc. of San Diego. The UCSD Pascal system requires at least 48K bytes of contiguous RAM (64K bytes are recommended) and at least 175K bytes of disk storage.

UCSD Pascal comprises an entire operating system and can run on a variety of machines. The operating system includes a file handler, a character-oriented editor, a one-pass compiler that generates P-code, a conditional macro assembler, a linker, and a librarian utility. The operating

Sandhu Machine Design, Inc. 308 S. State, Champaign, IL 61820 217/352-8485 "Hands-on-Introduction to ROBOTICS
The Manual for XR-1", included
with the robotic system, may be
purchased separately @ \$20 ea. p.p.

system is written in Pascal and supported by a run-time interpreter written in the language of the host processor. The interpreter is part of the package, which retails for \$500. A separate FORTRAN compiler is available for the system.

An important trade-off to be noted by CP/M users who are considering purchase of the UCSD system is its portability versus its incompatibility with CP/M. The UCSD system is portable because versions of the interpreter have been developed for a variety of microprocessors. Softech supports the system well, and this support will probably be extended to more processors in the future. The considerable advantage to the software developer is that UCSD Pascal programs can be transferred without modification from one hardware system to another.

Conversely, UCSD Pascal is incompatible with CP/M, Data files are not automatically transferable between CP/M and the UCSD system. This causes problems in maintaining the integrity of databases. The problems are only partially offset by the availability of programs to convert files from one system to another.

# Pascal/MT+

Pascal/MT+ is a product of MT Microsystems of Cardiff-by-the-Sea, California, This Pascal includes a compiler, a linker, a disassembler, a debugger, and a runtime subroutine library. Pascal/MT+ requires an 8080 or Z80 processor running CP/M with at least 140K bytes of disk storage and 52K bytes of RAM, including space for CP/M. For developing large programs, a minimum of 300K bytes of disk storage and 60K bytes of RAM are suggested. The compiler generates relocatable, optimized Z80 code, or 8080 code (if desired) that must be linked to the run-time library. The Pascal/MT+ package costs \$450.

Pascal/MT+ is an interesting and powerful tool. Alone among the four implementations, it supports passing of procedures and functions as parameters to other procedures and functions and supports "conformant" arrays-both features required by the ISO standard. In fact. Pascal/MT+ is the only implementation that claims full compatibility with the ISO standard.

The conformant-arrays scheme is important because there are no dynamic arrays in Pascal. The programmer must change the declaration of an array in the source program to change the bounds of the array at run time. This restriction imposes a burden on the programmer. The conformant-array scheme provides greater flexibility. For example, you can pass bounds derived by the source program to a library program, provided the array in the library program is of the same type as the array originally declared and the bounds passed are within those originally declared.

Pascal/MT+ provides several facilities for machinelevel programming from Pascal and also makes possible the use of interrupts. Also, several nonstandard data types are built in, For example, Pascal/MT+ provides two types of real data; fixed-point binary-coded and floating-point.

Pascal are the WHILE...DO, REPEAT...UNTIL, IF...THEN...ELSE, the FOR...DO loop, the CASE statement, and the GOTO statement. All of these constructs are supported in the four implementations. All the implementations but UCSD Pascal have provided for an OTHERWISE clause in the CASE statement—an addition included in the ISO standard. A restricted form of GOTO (which precludes exiting the body of a procedure) is supported in all versions except Pascal/MT+, which provides unrestricted GOTOs.

The primitive data types defined in standard Pascal include integers, reals, Boolean data, user-defined scalars and subrange types, and character data. The defined, structured types include arrays, sets of scalars, pointers, record types, and files of records. Wirth's Pascal calls for text files and permits packing of structured types to conserve memory space.

All these data types and structuring techniques except packing are available in each of the four Pascals. Packing is not explicitly available in the native-code compilers Pascal/Z and Pascal/MT+. These two allocate memory in bytes, whereas the other two allocate in words; that is,

# Now available from <u>your</u> computer storethe whole line of AJ couplers and modems.

Not just selected models. Any models. Ranging from the 0-450 bps A 242A, the world's most widely used acoustic data coupler, to the revolutionary AJ 1259 triple modem that handles 300 bps Bell 103, 1200 bps Bell 212A, and 1200 bps VA 3400 protocols.

# TASC. The Applesoft Compiler. It turns your Apple into a power tool.

Step up to speed. TASC, the Applesoft Compiler, converts a standard Applesoft BASIC program into super-fast machine code. By increasing program execution speed up to 20 times, Microsoft gives you a power tool for Applesoft BASIC programming.

Highest capacity available.
TASC will compile and run larger programs than any other Applesoft Compiler. As a disk-based system, it doesn't require the simultaneous presence of compiler and program in memory. The memory you save allows you to compile significantly bigger programs.

Power without bulk. Code expansion of up to 100% severely restricts other compilers. TASC's special code compression schemes typically limit code expansion to only 25%. You'll really appreciate that with complex programs or programs that utilize Apple's hi-res graphic pages.

More BASIC power. TASC's powerful new commands increase Applesoft BASIC programming capability. Chain with COMMON allows compiled programs to share variables, so a main menu "Applesoft is a trademark of Apple Computer, Inc.

supports several programs in a single runtime environment.

TASC's True Integer Arithmetic and Integer FOR...NEXT capabilities maximize the execution speed of compiled programs.

TASC's near total compatibility

with Applesoft speeds compilation of existing programs with little or no modification.

What about mistakes? You perfect your programs interactively with Applesoft. If something does slip by, TASC recovers from errors discovered in compilation

and traps all runtime errors. It even permits graceful interruptions during compilation.

See for yourself. Ask for a demonstration of TASC at your Microsoft dealer. Discover the software package that turns your Apple into a power tool.

Edectic shortly will be announcing products that are designed to work with CBM systems.

- 1. ROMIO: two RS232 ports—three parallel ports—26K EPROM memory-managed alternate character set, software controlled - EDOS (extended DOS).
- 2. Terminal program (options with ROMIO)
- 3. EPROM programmer
- 4. Front-end processor
- 5. Additional firmware to be announced

Be sure to write the address below for more information: dealer inquiries welcome.

P.O. Box 1166 • 16260 Midway Road Addison, Texas 75001 • (214) 661-1370 the native-code compilers always pack data. Generally speaking then, the native-code compilers are more conservative in terms of memory needed for data than are the other two implementations, although similar and sometimes even greater conservation can be achieved by packing data in the other two.

All the versions extend standard Pascal to include a predefined string type. Strings of length N may be defined up to a maximum length of 255, and the actual length of a string may vary from 0 to N during program execution. The next section discusses built-in procedures

for manipulating strings.

Pascal/M and UCSD Pascal have provided long (32-bit) integers as a predeclared data type. The operations permitted with long integers are addition, subtraction, and comparisons. Pascal/MT+ has provided two types of reals: floating-point reals and fixed-point, binary-coded decimal reals with 18 digits, four decimal. Pascal/Z provides floating-point reals and fixed-point reals with user-declared precision.

#### **Built-in Procedures and Functions**

Standard Pascal includes a number of intrinsic procedures and functions, including transcendental-arithmetic functions, memory-management procedures, and several

#### At a Glance

#### Name

UCSD Pascal, Version 2.0

#### Type of Software Package

Implementation of Pascal programming language. including the UCSD operating system

#### Manufacturer

Softech Microsystems 9494 Black Mountain Rd. San Diego, CA 92126 (714) 578-6105

\$500. Note: price is for Version 4.0. We tested Version 2.0

#### Format

B-inch IBM 3740-compatible

#### Type of Compiler

Pseudo-code compiler supported by a run-time Interpreter

#### Computer Needed

Any Z80-, 8080/8085-, 6502-, or 6800-based computer with 48K bytes of con-

tiguous RAM (64K recommended) and a Noppy-disk system with at least 175K bytes of online storage, or any Digital Equipment Corp. LSI-11 or PDP-11 computer

#### Documentation

A 450-page, paper-bound manual; includes documentation for the UCSD operating system

#### Audlence

Applications software developers. Pascal users

#### Comments

The UCSD system has its own file handler and operating system, including compiler, linker, assembler, editor, and librarian utility When the system is used on machines already equipped with CP/M, only the BIOS routines from CP/M are used. Non-CP/M users will need to write their own simplified basic input/output subsystem (SBIOS) and bootstrap module. Documentation for how to write the SBIOS is included

### Application Developers...

# PROFESSIONALS KNOW THE DIFFERENCE!

#### ... MDBS makes professional mainframe software available on micro computers at micro prices

Quality application development is expensive and time-consuming. Over 50% of the development effort for applications is usually related to the problems of data storage and retrieval

#### The MDBS Data Base Management System .

- is the "state-of-the-art" tool which can cut application development costs by 50% or more.
- is the first and only true and complete DBMS for micro computers
- is also available for the PDP-11
- offers features not available anywhere else...not on any machine...not at any price—even sur-passing mainframe DBMS's costing over \$100,0001

#### In no other system can you get all these advantages:

- fully integrated, data dictionary driven
- unparalleled data structuring abilities...far surpassing the older and more limited hierarchical, network, and relational approaches.
- unmatched query system...powerful, nonnavigational, and English-like...enables nested queries.

- extensive recovery facilities...ability to roll DB back to previous state.
- built-in data compression, data security, data encryption.
- numerous performance tuning abilities
- true multi-user capabilities.
- highly portable...available for most operating systems and languages (BASIC, COBOL, PASCAL, C, PL/1, FORTRAN, etc.)

MDBS overcomes the disadvantages of the older hierarchical, relational, and CODASYL approaches to data base management. MDBS is not restricted by any of those limitations typical of "data base pretenders" (file management systems). MDBS is the only true and complete data base management system currently available on micro computers

MDBS, Inc., also offers professional training seminars and consulting services to assist application developers in developing the highest quality application software in the shortest time possible.

Don't be misled by pretenders claiming to be "relational"...

input/output (I/O) procedures. We will consider the I/O procedures in a later section; for now, we will concentrate on other intrinsics and built-ins.

In standard Pascal you are permitted to dynamically allocate and deallocate memory for user-defined data types on a variable-by-variable basis. Only Pascal/MT + fully implements this standard. In the other versions, you can allocate space on a variable-by-variable basis, but you can only deallocate blocks of memory cells at a time. In these cases, memory is a heap of undifferentiated cells; the programmer can mark the top of the heap, dynamically allocate memory to variables, and then deallocate memory back to the old top of the heap.

A useful function for dynamic-memory management is one that returns the amount of memory available at the time the function is called. Such a function can inform the programmer that allocating more memory may clobber some portion of the current program. All but Pascal/Z provide this function.

All the versions have provided built-in functions for manipulating the string types just described. Pascal/Z provides functions for appending one string to another, determining the length of a string, and finding the position of a substring within a string. The other versions have these three built-in functions, and functions for inserting, deleting, and copying substrings from a string.

UCSD Pascal, Pascal/MT+ and Pascal/M have provided several high-speed, built-in procedures for moving bytes between memory locations. You can move data between packed arrays of data and similar data structures, initialize packed arrays, and search arrays for specified bit patterns on a byte-by-byte basis.

Pascal/M, Pascal/MT+, and UCSD Pascal have a procedure called EXIT that permits clean exits from procedures, functions, and programs. A typical application would be to exit a program after flagging an egregious user error, such as bad input from the keyboard.

Pascal/M and UCSD Pascal support random screencursor addressing through the built-in function GOTOXY(X,Y). Pascal/M also has built-in procedures that permit homing the cursor, clearing to end of line, and so on. UCSD Pascal supplies the utility program SETUP that matches the operating system to the characteristics of the user's terminal.

Pascal/MT + has several built-in procedures and operators for byte and bit manipulation. For example, you can perform an "OR" operation on two integers that is a logical OR on their bit representations, and you can test bits, shift bits, and swap bytes in 16- and 8-bit variables. There are also built-in primitives for handling interrupts at the Pascal level. The programmer can enable and disable interrupts and designate up to seven Pascal proce-

31352 Via Colinas • Westlake Village, CA 91362 • 213-991-2254 TWX 910-494-1253 (CHRISLIN WKVG) dures as interrupt procedures. The programmer assigns a vector number to an interrupt procedure and the compiler generates code to load the vector number with the procedure address.

Only Pascal/Z permits functions to return structured data values. In the other Pascals, functions can return only unstructured types.

#### Input-Output Procedures

Not surprisingly, there is significant variation in the I/O procedures that these four Pascals provide. The versions differ in adherence to standard Pascal and in their extensions to the standard.

Standard Pascal specifies four primitive file-handling procedures—GET(F), PUT(F), RESET(F), and REWRITE(F), where F is an arbitrary file type—and certain procedures for reading and writing text files. PUT(F) appends data to F, GET advances the file-position pointer and retrieves the next record, RESET resets the file-position pointer to the beginning of the file, and REWRITE initializes a file for writing. The text-file procedures are READ and READLN, which reads to the end of a line, and their counterparts WRITE and WRITELN. Left to the Pascal implementer is the way that an external disk file is associated with the internal file. Standard Pascal makes no provision for random access I/O.

Pascal/MT+, Pascal/M, and UCSD Pascal all supply the standard procedures; Pascal/Z subsumes the operations of GET and PUT under general-purpose READ and WRITE procedures. All four Pascals have simple methods for assigning disk files and external devices to internal file variables. All versions provide some form of random access for nontext files.

All four versions have built-in facilities for purging files from disk directories. All but Pascal/Z have an added procedure for closing an open file; in Pascal/Z, files are automatically closed on exit from the procedure block in which the file is declared, but there is no way to close a file explicitly.

Pascal/M, Pascal/MT+, and UCSD Pascal all provide a built-in function IORESULT that returns an integer value to indicate the result of the last I/O operation. The function can trap fatal execution-time I/O errors, such as failure to find a required disk file.

UCSD Pascal, Pascal/M, and Pascal/MT+ all provide low-level procedures to perform I/O on untyped files. These procedures transfer memory-image bytes with no interpretation. In addition, Pascal/M and Pascal/MT+ provide built-in primitives for manipulating Z80 inputoutput ports.

#### Modules, Overlays and Chaining

Programmers developing large application programs face several problems that can become acute on microcomputers. Among these are limitations on memory size, the time-consuming need to recompile large programs when only small changes are made, and the need to link high-level programs to low-level routines for speed or convenience in special applications. The four Pascals reviewed here are reasonably well equipped with tools to solve these problems.

Two techniques for mitigating limitations on memory size are overlays (program segmentation) and chaining (calling one program from another). For the overlay approach, the programmer declares segments within a host program, with the segments either procedures or functions. A segment is brought into memory from disk when needed and remains active in memory only as long as needed; control returns to the host program. Segment procedures can access global data and procedures in the host program, just as they do ordinary procedures. With chaining, the currently active program calls the next link in the chain, which is then loaded from disk. There need be no host program per se and no relationship between the global declarations of chained programs.

UCSD Pascal and Pascal/M support overlays. In UCSD Pascal, a program can have a maximum of 16 segments, while Pascal/M can support as many as 10 segments. Both versions count the host program as one segment. Pascal/Z and Pascal/MT+ allow chaining. Both provide mechanisms for sharing global data between chained programs, but not for sharing global procedures. Pascal/Z, UCSD Pascal, and Pascal/MT+ support the ability to divide large programs into separately compil-

Our new MC-1000 Computer System is proof that the age of affordability in computers has arrived. Thanks to single board design we can offer not only the lowest priced computer in its class but also the most reliable. For information and ordering call:

able pieces and the concomitant ability to develop modules or libraries of logically related procedures.

UCSD Pascal offers UNITs, which consist of three major syntactical pieces: an INTERFACE portion, an IM-PLEMENTATION portion, and initialization code. The INTERFACE portion contains the declarations (data, procedures, and functions) accessible to a host program. The IMPLEMENTATION portion contains the code for the procedures delcared in the INTERFACE and any additional data structures and code required to perform the tasks of the unit; the latter declarations are not accessible to the host program. The initialization code is used to initialize the UNIT and is unknown to the host.

UCSD UNITs come in two varieties: intrinsic UNITs and regular UNITs. An intrinsic UNIT must be stored in the system library, which must be online when a program using the unit is executed. Intrinsic UNITs are prelinked to their hosts and do not have to be relinked if either the host or the UNIT is changed. Regular UNITs must be linked to the host by the programmer. Once linked, they need not be online, since the UNIT's code is duplicated in the host's code file. Regular UNITs count against the number of segments allowed in a program; intrinsic UNITs do not.

Pascal/MT+ provides what it calls modular compilation. When combined with a certain compiler option, this feature is comparable to the UCSD regular UNIT except for the initialization code. Pascal/MT + modules may be somewhat more convenient to use than UCSD UNITs because the former can be broken into as many modules as desired at any time, while the latter require more forethought for effective use.

Pascal/Z provides a somewhat more limited version of modular compilation than Pascal/MT+. First, the number of modules is held to 10, including the host program. Also, there can be no hidden portions to a Pascal/Z module; in the language of UCSD UNITs, Pascal/Z modules consist of only an INTERFACE block. Finally, a Pascal/Z module cannot contain any global data declarations; it can only contain procedures and functions with local (private) data structures.

Like UCSD UNITs, Pascal/Z and Pascal/MT+ modules must be linked explicitly to their hosts. Unlike UCSD Pascal, Pascal/Z and Pascal/MT + make the programmer responsible for insuring that data and procedures used by the host and its modules are declared consistently across modules.

Modules in Pascal/Z and Pascal/MT+ can freely use procedures declared in other modules. Procedures can be similarly cross-referenced by UCSD UNITs, but this reguires more planning than in the other two Pascals.

Pascal/Z, Pascal/MT+ and UCSD Pascal all allow the user to link Z80 assembly-language programs to Pascal programs. Pascal/MT+ features a special declaration INLINE whereby the programmer can include hexadecimal code for machine-language programs in the body of a Pascal program without using externally assembled routines.

## LETTER PERFECT MORDE

ATARI 400/800

APPLE II & II+

EASY TO USE — Latter Perfect is a single load easy to use program. It is a menu driven, character orientated processor with the user in mind. FAST machine language operation, ability to send control codes within the body of the program, mnemonics that make sense, and a full printed page of buffer space for text editing are but a few features. Screen Format allows you to preview printed text. Indented margins are allowed. Deta Base Merge with DATA PERFECT by LJK, form letters, accounting files and mailing labels only with MAIL MERGE/UTILITY by LJK. FEATURES — Proportional/Incremental spacing \* Right Justification \* File Merging \* Block movement \* Headers \* Footers \* Print Multiple Copies \* Auto Page Numbering \* Scroll forward/backward \* Search and Replaces \* Full cursor control \* Underlining \* Boldface \* Superscripts \* Subscripts \* Auto page numbering \* Insert character/line \* Delete character/line \* Centering \* Horizontal tabs/changeable \* Multifunction format line (line spacing - left margin - page width - lines/page - change fonts - top/ bot margin adjust) MUCH MORE! \$149.95

#### ATARI VERSION 2.0 #2001

Uses proportional font, right justified with Atari 825/Centronics\* 737, 739 printers. Uses EPSON MX\* Series + Graftrax/italicized font. Can mix type fonts on same page; mix boldface and enhanced font in same line with justification. Can be used with 16K

"Compared to the price of many other word processors, this package is a steal. It does everything the advertisement claims and more. On top of this the software is very easy to use." A.N.A.L.O.G. MAGAZINE

#### APPLE VERSION 5.0 # 1001

DOS 3.3 compatible - Use 40 or 80 column interchangeably (Smarterm - ALS; Videoterm-Videx; Full View 80 - Bit 3 Inc.; Vision 80 - Vista; Sup-R-Term - M&R Ent.) Reconfigurable at any time for different video, printer, or interface. USE HAYES MICROMODEM II LCA necessary if no 80 column board, need at least 24 K of memory. Files saved as either Text or Binary. Shift key modification allowed. Data Base Merge compatible with DATA PERFECT® by LJK.

"For \$150, Letter Perfect offers the type of software that can provide quality word processing on inexpensive micro-computer systems at a competitive price." INFOWORLD

#### DATA PERFECT T.M. LJK

#### APPLE & ATARI DATA BASE MANAGEMENT

\$99.95

Complete Data Base System. User orientated for easy and fast operation. 100% Assembly language. Easy to use. You may create your own screen mask for your needs. Searches and Sorts allowed, Configurable to use with any of the 80 column boards of Letter Perfect word processing, or use 40 column Apple video. Lower case supported in 40 column video. Utility enables user to convert standard files to Data Perfect format. Complete report generation capability, Much More!

#### EDIT 6502 T.M. LJK

This is a coresident - two pass ASSEMBLER, DIS-ASSEMBLER, TEXT EDITOR, and MACHINE LANGU-AGE MONITOR. Editing is both character and line oriented. Disassemblies create aditable source files with ability to use predefined labels. Complete control with 41 commands, 5 disassembly modes, 24 monitor commands including step, trace, and read/write disk. Twenty pseudo opcodes, allows linked assemblies, software stacking (single and multiple page) plus complete printer control. i.e. paganation, titles and tab satting. User can move source, object and symbol table anywhere in memory. Feel as if you never left the environment of BASIC. Use any of the 80 column boards as supported by LETTER PERFECT, Lower Case optional with LCG.

#### LJK DISK UTILITY **APPLE \$29.95**

This menu driven program allows the user to manipulate a variety of different file types. Binary, Text, and Source files may be easily converted into each other. The program may be used with APPLESOFT\*, VISCALC\*, and other programs. These program files may be readily adapted for multiple use including editing with LETTER PERFECT word processings.

#### MAIL MERGE/UTILITY

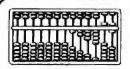

This menu driven program combined with LETTER PERFECT allows user to generate form letters and print mailing labels. With the Atari, you may CONVERT ATARI DOS FILES, or Visicals files compatible for editing with LETTER PERFECT. Utility creates Data Base files for Letter Perfect.

#### LOWER CASE CHARACTER GENERATOR

\$24.95

Lower Case Character Generator for the Rev. 7, Apple II or II+ computers. When installed, this Eprom will generate lower case characters to the video screen. Lower case characters set has two dot true descenders. Installation instruction included. Manual includes listing of software for full support and complete instructions for shift key modification. Compatible with LETTER PERFECT.

#### Ease of Use

Ease of use of any given language implementation lies mainly with the user. Ease of use may be defined as a measure of how quickly and reliably an implementation can help a programmer accomplish a given programming task.

The main advantage of Pascal is the ease with which the programmer can express the control and data structures that seem to arise naturally when designing a program. Beyond the standard Pascal, however, there is much that the language implementer can do to simplify the programmer's job. Since the programmer spends (or should spend) a great deal of time designing and writing programs, the relevant question is whether the language implementation helps or hinders the programming process. String functions, for example, have proved very useful in manipulating character data of arbitrary length, and all the Pascals we examined had string functions in one form or another. We feel that other additions to standard Pascal can be of great help, as long as they do not detract too much from the resulting program's portability to other systems. We previously discussed most of these useful features.

In addition to programming ease, there is debugging ease that reduces the time necessary for the programmer to sit in front of the video display. The sequence of commands that the user types to compile, link, and run a program can be simple (e.g., with UCSD Pascal, in the simplest case, you can execute a source program just by typing an "R") or complex (e.g., Pascal/Z, which in the simplest case requires three separate CP/M commands to transform a source file into a runnable program). Fortunately, CP/M commands can themselves be gathered into a file and executed using the SUBMIT feature.

Finally, the documentation can be a source of either help or frustration. The manuals that accompany these packages are uniformly poor; unfortunately, they were probably written by the programmers who developed the packages. Any user who expects to learn Pascal from these will be bitterly disappointed. (Although to be fair, the manuals do not claim to be tutorials.) We also found the manuals disorganized, with poor indexes and tables of contents. Finding the answer to any specific question was a challenge, and the clarity of the English in the documentation is best left without critique.

We mentioned earlier that UCSD Pascal comprises an entire operating system, but failed to express the grief we experienced in getting the system configured for our machine, compounded by the confusing and contradictory documentation. The configuration process per se is simple. The difficulty is in reaching the point at which you can start the configuration process.

# S-100 INNOVATORS:

# CITRONICS

#### **REMOTE CONTROLLER—Innovative Features:**

- \*Complete 256 address control-not just 16
- \*No ultrasonic link-prevents erractic operation
- \*120,208,240 and 277VAC control—for single & 3 phase operation
- \*Hardware driven-requires minimal software
- \*Complete line of industrial switches available—to 5.5KW

#### **REAL TIME CLOCK—Innovative Features:**

- \*First to use LSI OKI clock chip
- \*Crystal controlled for .002% accuracy
- \*4 software selectable clock generated interrupts
- \*Full clock and calendar data
- \*Lithium battery backup good for 6000 hours!

#### **ENERGY WATTCHER** —Innovative Features:

- \*First microcomputer based energy monitor
- \*Clip on probes for easy installation

Circle 135 on inquiry card.

We point this out not to dissuade the reader from using UCSD Pascal, but to inform you of what to expect. If you are interested in UCSD Pascal, it may be worthwhile to seek out a configuration matched to your machine. Some preconfigured versions are available.

#### **Benchmarks**

To test each version of Pascal for speed, ease of use, and other features, we wrote and ran a series of benchmark programs. We did all testing on a Cromemco System III computer, which has 64K bytes of memory and two 8-inch floppy-disk drives capable of handling more than a million bytes of data each. The CP/M-compatible versions of Pascal were run under CP/M version 2.2 (from Intelligent Terminals Corporation). We timed the programs using Mountain Computer's 100,000 Day Clock. The results appear in table 1.

A few words of caution: the results of these (or any other) benchmarks should not be taken as absolute indicators of any Pascal's inherent quality. Our programs are necessarily simple and relatively portable between the different implementations. We certainly do not represent these programs as the "best" programming solutions available for the problems they solve.

Our first benchmark, PRIMES (see listing 1), is a program to calculate the first 1000 prime numbers, using a method from Donald Knuth's The Art of Computer Programming, Volume I: Fundamental Algorithms (Reading, MA: Addison-Wesley, 1968), pages 143-144. The only statements that needed change, as we moved from one version of Pascal to the next, were in the routine to read the time from the Mountain Computer clock board, which required Z80 hardware port input. Pascal/M and Pascal/MT+ had intrinsic routines to do such input; for UCSD Pascal and Pascal/Z, we wrote small assembler routines to do the job. To minimize rewriting, we isolated the version-dependent code in a function that was different for each implementation.

We also made two ease-of-use measurements while we were compiling and running the program. First, we measured the time needed to transform the Pascal source file into a running program. For the CP/M Pascals, we used a SUBMIT file containing the necessary commands

Language Implementation Program	Pascal/M	Pascal/MT+	Pascal/Z	UCSD Pascal
PRIMES				
Execution time "Compile time" Keystrokes required to run	94.2 sec 35 sec 31	24.1 sec 93 sec 56	35.1 sec 132 sec 68	70.0 sec 46 sec 16
PRECISION				
Small Big	5,96E - 08 3,36E + 07	1.19E - 07 1.68E + 07	2.38E + 07 8.39E + 06	5.96E - 08 3.36E + 07
BLOWUP				
Memory available for dynamic variables	37.4 K	52.3 K	52.4 K	38.9 K
BENCHMARK				
(All numbers are execution times in seconds)				
Random number generation	3.4	2.7	1.1	2.0
Writing array to disk Shell sort Reading array from disk	3,5 332 1,4	4.3 152 2.0	3.9 93 1.8	6.9 193 2.4
Quicksort	31	14	15	18
Binary tree generation	51	21	8	25
Writing free to disk Displaying array on CAT	28 46	25	21 14	45
Displaying tree on CRT	48	10 11	14	22 23

Table 1: Results of benchmarking programs for four implementations of Pascal. All testing was done on a Cromemco System III computer with two 8-inch disk drives. PRIMES, shown in listing 1, is a program that calculates the first 1000 prime numbers. PRECISION, shown in listing 2, determines the precision of floating-point calculations in each implementation of Pascal. BLOWUP, shown in listing 3, determines the approximate amount of memory space available for dynamically allocated variables. BENCHMARK, shown in listing 4, performs a series of tasks common in applications programs.

### UNBE ABLE!

State-of-the-art Single-Board computer now available! Can be used in S-100 (Master, Slave, Multi or Single user) or Stand-Alone configurations.

FINALLY, state-of-the-art performance is available at an affordable price.

#### COMPARE THESE FEATURES:

- Z80A or Z80B
- 4 TIMERS (ZCTC)
  64K RAM (64KX1 CHIPS)
  2 SERIAL PORTS (ZSIO)
  4 PARALLEL PORTS (ZPIO)

- UP TO 16K EPROM (2732)
- NEC FLOPPY DISK CONTROLLER JUP TO FOUR 8" DOUBLE SIDEDIDOUBLE DENSITY DRIVES!
- INTELLIGENT WINCHESTER INTERFACE
- ON-BOARD EPROM BURNER

FOR THESE SINGLE QUANTITY PRICES:

4MZ VERSION (Z80A)

6 MZ VERSION (Z80B)

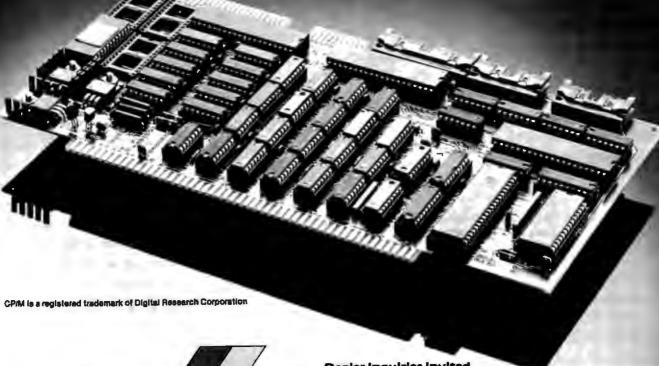

4 MZ SLAVE PROCESSOR

6 MZ SLAVE PROCESSOR (NO DISK CONTROLLERS ON BOARD)

The 5-100 version of this product can act as a Master processor, Slave processor, or Intelligent peripheral controller. Intra-processor communication is achieved through the use of efficlent, high speed buss transfers using special hardware/software techniques.

We also have what we think is one of the best Implementations of a CP/M BIOS available off the shelf. The BIOS has the following features:

- All Devices INTERRUPT DRIVEN
- Type Ahead Input/Output Buffers
- Real-Time Clock
- Time Of Day Clock
- Multi-level User Password Support
- Menu Driven Utilities for Format, Disk Copy, etc.
- Unique Configuration Utility Program for Setting Baud Rates, Changing Step Time, Changing Passwords, etc.
- Cylinder Concept used for Double Sided /Double Density Configuration Resulting in increased Performance Std. size 5 x 10.

### ENCYCLOPEDIA OF COMPUTER SCIENCE

YOURS FOR ONLY

\$95 when you join The Life

when you join The Library of Computer and Information Sciences. You simply agree to buy 3 more books—at handsome discounts—within the next 12 months.

(a \$60.00 value)

Find the answers to virtually all your data processing questions in the ENCYCLOPEDIA OF COMPUTER SCIENCE.

Thousands of photos, diagrams, graphs and charts completely illuminate the ENCYCLOPEDIA'S clear and thorough coverage of every area of the computer sciences—software, hardware, languages, programs, systems, mathematics, networks, applications, theory, history and terminology.

Appendices provide abbreviations, acronyms, special notations and many numerical tables. An additional highlight is a complete cross-reference system that assists the reader seeking in-depth information.

# What is The Library of Computer and Information Sciences?

It's the oldest, largest and most respected book club especially designed for the computer professional. In the incredibly fast-moving world of data processing, where up-to-date knowledge is essential, we make it easy for you to keep totally informed on all areas of the information sciences. In addition, books are offered at discounts up to 30% off publishers' prices.

Begin enjoying the club's benefits by accepting the ENCYCLOPEDIA OF COMPUTER SCIENCE. It's the perfect reference for computer professionals...and it's a great bargain, too.

stopped when the program's message 'The first 1000 primes:" was displayed. Then we counted the number of keystrokes that would have been necessary for compilation.

As expected, we found that the execution time of programs produced by the native-code compilers was much less than that of programs produced by the P-code compilers. On the other hand, the compilation time and the number of keystrokes necessary to run the program were much greater for the native-code compilers; there is a trade-off between calculational speed and ease of use. Perhaps the ideal situation would have P-code used for software development and native code employed for the final version.

Our second benchmark is PRECISION (see listing 2). It is an attempt to determine the precision of floatingpoint calculation for each Pascal. We calculated two numbers, BIG and SMALL, BIG was defined to be the largest number such that:

$$(BIG + 1.0) > BIG$$

given the limitations of floating-point arithmetic. Similarly, SMALL was defined to be the smallest number such that:

$$(1.0 + SMALL) > 1.0$$

Here we found that all our Pascals had approximately seven digits of precision, some slightly more and others slightly less. (Note that all four verions include some means of doing extended-precision arithmetic.)

# SOFTWARE **FAILURES**

Using a micro in a product <u>sounds</u> easy... One piece of software can make the difference between success and failure.

What do you do when the software doesn't work? Over the years, we have seen many good products fail, either before or after they reached the market. because the microprocessor software did not do its job.

#### WHAT WENT WRONG?

Many of the failures occurred because the people programming the micro did not know how to organize a large control program. Those responsible for the product implementation were wizards at hardware design and had easily coded small micro control programs before. But the programming techniques that worked for less than 2K bytes of code simply tell apart as the program grew beyond 4K byles.

Unfortunately, the loops and tests and liags that work so well for a small program get out of control very rapidly as the program grows. Pretty soon, some of the things the program must do are not being done last enough. The code gets too complicated, difficult to modify and unreliable. The result: another software failure!

Fortunately, these problems can be avoided by using a program manager. You can divide your complex control program into a number of separate, more manageable programs, called tasks, each designed to do one job. For example, a Keypoard Task might handle user input; a Printer Task might generate reports. Each task can be written and tested separately and then combined to form a reliable, finished system.

The program manager, called a multilasking executive, supervises the orderly execution of these tasks, assuring that the most important jobs always get done first. Tasks appear to be executing simullaneously. It's almost like having a separate CPU for each task!

That is why professional software designers are now turning to AMX as the starting point for their product and system designs. They know that AMX will shield them from the difficulties of managing the micro, freeing them to concentrate on their application

AMX is our multitasking executive for the 8080, 8085, Z80 and 6809 processors. We're rather proud of it. We made AMX compact, very last, and ROMable to meet our own application needs. Even though the AMX nucleus is less than 1400 bytes in size, it features multiple task priorities, intertask message passing with priority queuing, external event synchronization, and interval timing with 32-bit precision. Each feature is clearly explained in the AMX Reference Manual.

#### **RELIABILITY BUILT IN**

We don't know anyone who can write an executive without errors, so we thoroughly tested AMX in real applications before ever offering it as a product. That is why not one system malfunction has ever been attributed to AMX. That kind of reliability just isn't an accident,

#### HARDWARE INDEPENDENCE

AMX does not require a particular hardware configuration. Of course, it does need a microprocessor, but even there we offer you a choice. You control your environment. You pick the I/O method. You decide the most optimum interrupt service technique for your system. AMX will support your choice.

High level language interface modules are available separately to allow AMX to be used with most popular programming languages including PASCAL, C. PL/M and FORTRAN. Of course, you can also code in assembly language if required.

Users of the CP/M and FLEX Operating Systems can utilize our AMX interface modules to access information on diskette in real time.

#### COMPLETE DOCUMENTATION

AMX can be judged by the quality of our documentation. The positive response from our users has exceeded our expectations. Our manuals are especially valuable to those just being introduced to real-time multitasking, More experienced users will appreciate the fact that we deliver AMX source on diskette to permit AMX to be moved to the software development system of your choice.

#### **HOW TO ORDER**

A specification sheet and price list are available, free. Your check or money order for \$75 will purchase the AMX Reference Manual for immediate evaluation (specify 8080, 8085, Z80 or 6809 processor). Add \$25 for postage and handling outside USA and Canada. The standard AMX Multitasking Executive package, including source code, is available for \$800 after signing our liberal license agreement.

AMX is the choice of professionals the world over. Make it yours, today.

END.
```

Our third benchmark, BLOWUP (see listing 3), was designed to measure the amount of memory each implementation had available for dynamically allocated variables. The program successively allocates 100-byte blocks of memory until a run-time error occurs due to lack of additional memory. The program continuously prints out the number of blocks it has successfully allocated; the last number it prints (before the run-time error), divided by 10, is the approximate dynamicmemory space in kilobytes. All the versions of Pascal except for Pascal/MT+ generated such an error; running the program with Pascal/MT+ eventually caused the system to "hang," apparently due to overwriting the memory containing the program or the operating system. Pascal/MT + does not check for such memory overflow; the programmer must do it with one of the built-in procedures. (For many programmers, this may be a desirable feature.)

From this program we found that the native-code compilers have more space for program code and dynamic variables than do the P-code versions. This is probably

because of the extra memory required for the P-code interpreters, which results in less memory available to user programs. This test is somewhat misleading, however, since for larger programs this situation could be reversed. P-code should be more compact than native code, and the compactness should atone for the interpreter overhead in large programs. (We did not test this hypothesis.)

The final benchmark is called BENCHMARK (see listing 4), which is an attempt to measure the different Pascals' performances in the more realistic applications of sorting, disk I/O, and data-structure generation. The program first generates a pseudorandom array of 1024 integers, then writes it to disk. (Pascal allows writing the entire array as a single entity, which turns out to be infinitely faster on our system than writing each element of the array individually.) The array is sorted using the Shell-Metzner algorithm. The random array is then read back into memory from disk (again, as a single entity) and sorted using the quicksort algorithm. (Both sorting algorithms are adapted from Algorithms Plus Data Struc-

### Softlights

**By Fred Huntington** 

We are proud to introduce our first major piece of software, Understand Yourself. Written by Mike Taylor, this series of programs is based on the Chicago Review Press book, The Test Yourself Book by Dr. Harry E. Gunn.

The disk contains several hundred questions and consists of the programs: Assertive Test. Conscience Test. Manipulation Test. Personal Equation Test, Marital Adjustment Test, Individual Scale of Values, Preferred Activities Test, and Sexual Attitudes Test.

The price of Understand Yourself is \$24.99. The book, which contains all the tests plus a lot more, is a bargain at \$7.95. Dealer inquiries are welcome.

#### **VOLCANDES**

Just took a look at a new program called Volcanoes. Has great graphics and fremendous teaching potential for home or school use It lists for \$49.95 and our price is 544.99

#### Foreign Orders

We are no longer able to accept foreign checks not drawn upon U.S. banks. We welcome charge cards. We also take wire transfers to our bank (\$6.00 service charge). We had one check that by the time all the lees were taken out of it, we owed \$8.00 Help!

#### Maxell Disks

We are now authorized distributors for the best diskettes made today - Maxell. We are selling the Apple \* / Atan: version of these fine disks. 10 for \$36.99. Once you try these, you'll never go back to the cheaper versions. The tolerances on these disks are so close that they never need hub rings. We stock the complete line of Maxell disks, including all the eight inch variety. Dealer inquines welcome.

#### Great Grandma Huntington

Great Grandma Huntington always said to try harder - and we do. We will soon have tee shirts for sale with Great Grandma Huntington's picture on them. Watch for Granny! ton's picture on them, watch for Granny!

#### **FOREIGN ORDERS**

We regret that we can no longer accept checks (bank charges were sometimes greater than the amount of the check). We will gladly accept U.S. currency, VISA, MasterCard or American Express at no extra charge, or you may make direct wire transfers to our bank, Security Pacific, Corcoran, CA 93212, for a \$6.00 charge All overseas orders are shipped by air

    F [J]:=Øs
   1:=1+17
   writeln(1):
  ENE:
END.
```

Listing 4: BENCHMARK, a program that measures performance in tasks that occur commonly in applications programs. The program generates a random array of integers; writes the array to disk; sorts the array with the Shell-Metzner algorithm; reads the random array back into memory from disk; sorts the array with the quicksort algorithm; reads the unsorted array into memory yet again, using the integers as keys by which dummy data are stored in a binary tree; and writes the tree elements individually to disk. Along the way, the program displays the array elements on the terminal screen to insure that the disk input/output and the sorts are done correctly, as well as to see how fast each version of Pascal can output text.

PROGRAM benchmarks:

# If you want a choice in print wheels, here's the first choice in printers.

The Diablo 630.

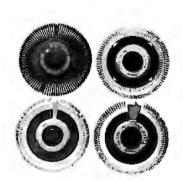

It's the first printer that lets you use either metal or plastic print wheels. So you can choose the print wheel that's just right for the job.

The 630 works as well with a 96-character plastic daisy print wheel as it does with an 88-, 92-, or 96-character metal daisy print wheel. In over 100 different type styles.

Every 630 has fewer moving parts than competitive printers, which makes it more reliable. And it offers unsurpassed print quality. Compatibility with Diablo supplies. And bi-directional printing capability.

So if you want to change your print wheels, you'll just have to change your printer.

To a Diablo 630 printer.

# Are you keeping up with computer salaries?

# Get the latest data in our new report. It's FREE!

With compensation rising rapidly and sweeping technological changes occurring practically overnight in the computer profession, you can quickly become out-of-touch with salary and career trends. Are you—and is your salary—keeping up?

If you haven't kept in touch with computer salaries in the past six months or so, you might be surprised at the changes.

In our recent survey, which polled more than 50,000 computer professionals, new statistics about compensation differences emerged, Here is a sampling:

 While some computer professionals have increased their salaries dramatically during the past twelve months, others, performing the same type of work and having the same general level of experience, have barely managed to keep pace.

- While length of experience in computing bears a direct relationship to compensation, type of experience is often a more critical factor.
- Some emerging technologies—microcomputer systems, for example—are having an unusual impact on compensation in the field.

#### Salaries for 48 positions are compared.

1982 salary data for 48 different position categories—at various levels of experience and computer installation sizes—are reviewed in the report. Included are positions in programming, software.

systems design, data communications, mini/micro systems, data base, EDP auditing, computer marketing and more.

#### it's free to computer professionals.

The report is available without charge. Call today,

and a copy will be mailed to you in strict confidence, with absolutely no obligation.

More performance than you ever imagined — for \$1995. If you're considering a DEC\* terminal, C. Itoh now has two reliable alternatives that could easily change your mind.

could easily change your mind.

Take our 132-column CIT 101, for example. Unlike DEC's VT100, it includes full AVO performance—as standard equipment. You also get a 96 ASCII character set, plus 128 special characters. Characters may appear single-width and double-width, double-height. Reverse video, blinking, half-intensity and underscore may be used in up to 16 combinations. The cursor may be underline or block, blinking or non-blinking, or invisible to the viewer—all under computer control. There's

raster graphics too. And 19.2K Baud asynchronous communications. Human engineered features include a non-glare screen and detached selectric-type keyboard. Of course, if all you need is 80-column capability, have we got a terminal for you.

The \$1195 80-column terminal that performs like a 132. It's C. Itoh's CIT 80, the DEC VT52\* emulator that's packed with features many bigticket terminals don't offer. Things like smooth scrolling, soft setup mode, line drawing graphics and unidirectional RS 232-C printer port. A 19.2K Baud main port features X/ON-X/OFF protocol as well as full and half-duplex in conversation mode. Video attributes include

blinking, underline, half intensity even reverse video. You get CIT 101type human engineered features too. Plus socketed firmware for maximum OEM flexibility.

Both terminals are backed by our 90-day warranty, fully field supported and ready for immediate shipment. So if you're thinking of getting a DEC terminal, consider the alternatives: CIT 80 and CIT 101.

For full details, contact our exclusive representative, ACRO Corporation, 18003-L Skypark South, Irvine, CA 92714. (714) 557-5118.

C. ITOH ELECTRONICS, INC. One world of quality.

Before you order a VT100, think twice.

Text continued from page 340:

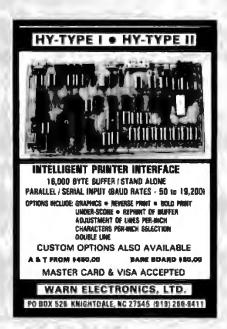

tures Equals Programs by Niklaus Wirth, Prentice-Hall, 1975.) After this, the unsorted array is again read into memory, and the integers are used as keys by which dummy data are stored in a binary tree. The tree elements are then written individually to disk. The array elements are displayed on the monitor along the way to insure that the disk I/O and the sorting are done correctly. Displaying the array also measures how fast the Pascal can output textual information.

The incompatibilities between the Pascal implementations for this program only involved the way the disk data were accessed. Slight changes in the program were made for opening, closing, reading, and writing to the disk files. (Obviously, the changes described for reading the clock also had to be made.) Again, native-code compilers were faster in the computation-intensive tasks such as sorting and were also noticeably faster in output to the terminal. All Pascals took about the same time to write and read from the disk.

The four Pascals reviewed here defy classification as good or bad; they seem almost to represent different philosophies of language implementation. We cannot recommend one Pascal over another or say that you would find any of them unacceptable for your purposes. We only hope that you now have enough information to decide for yourself.

Updates seem to be published faster than magazines are. Some information on new versions of the Pascals tested in this article is given on page 356. . . . G.W.

# Qume<sub>®</sub> Data Trak<sup>™</sup> Floppy Disk Drives

by: Computer products, inc.

The Data Trak 5 double-sided double-density drive uses state-of-the-art technology to give you superior data integrity through improved disk life, data reliability, and drive serviceability using 5% media.

Oume's independent head load yields wear characteristics far superior to competitive drives. This superior wear performance produces savings on both diskette usage and drive maintenance.

Improved data reliability, resulting from superior amplitude and bit shaft characteristics, optimizes operator efficiency and reduces processing time for end-users.

And Data Trak's unique modular design means simplified field servicing for you and your customers.

#### **Design Features**

Expanded storage capacity . Two-sided, double-density

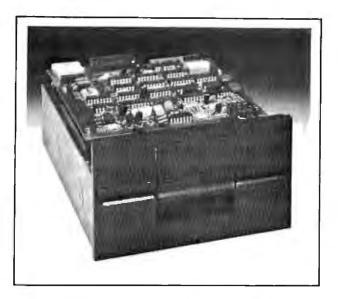

Proven head carriage assembly • Ceramic head with tunnel erase • Dual-head flex mounting arrangement • Superior head load dynamics

Precise lead screw actuator • Fast access time — 12 ms track-to-track • Low friction and minimum wear • Low power dissipation

Additional features • Industry standard 5¼" media format • ISO standard write protect • Door lock out for media protection • Requires DC voltage only • Daisy Chain up to 4 drives • Heads load on command independent of loading media

#### **Product Specifications**

Performance Specifications • Capacity: Unformatted: 437.5K or 500K bytes; Qume Formatted: 286.7K or 327.7K bytes • Recording Density; 5456 BPI • Track Den-

sity: 48 TPI • Cylinders: 35 or 40 • Tracks: 70 or 80 • Recording Method: FM or MFM • Rotational Speed: 300 RPM • Transfer Rate: 250K bits/second • Latency (avg.): 100 ms • Access Time: Track-to-track 12 ms; Settling 15 ms • Head Load Time: 50 ms

The Data Trak 8 double-sided double-density drive uses state-of-the-art technology to give you superior data integrity through improved disk life, data reliability, and drive serviceability.

Qume's innovative approach to controlling head load dynamics yields wear characteristics far superior to competitive drives. In independent evaluation, Data Trak 8 is setting industry standards for tap test performance. This superior wear performance produces savings on both diskette usage and drive maintenance.

Improved data reliability, resulting from superior amplitude and bit shift characteristics, optimizes operator efficiency and reduces processing time for end-users.

And Data Trak's unique modular design means simplified field servicing for you and your customers.

#### **Design Features**

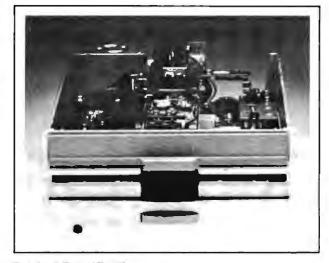

Expanded storage capacity . Two-sided, double-density

Fully IBM compatible • IBM 3740 and System 32 drives • IBM 3600 and 4964 drives • IBM System 34 drives

Proven head carriage assembly • Ceramic head with tunnel erase • Dual-head flex mounting arrangement • Superior head load dynamics

Fast, precise steel bell drive • Fast access time — 3 ms track-to-track • Low friction and minimum wear • Low power dissipation

Additional features • ISO standard write protect • Programmable door lock • Negative DC voltage not required • Daisy Chain up to 4 drives • Side-by-side mounting in standard 19" RETMA rack • Compatible with Shugart SA850/SA851

#### **Product Specifications**

Performance Specifications • Capacity: Unformatted: 1.6 Mbytes/disk; IBM Format; 1.2 Mbytes/disk • Recording Density: 6816 BPI • Track Density: 48 TPI • Cylinders: 77 • Tracks: 154 • Recording Method: MFM • Rotational Speed: 360 RPM • Transfer Rate: 500Kbits/second • Latency (avg.): 83 ms • Access Time: Track-to-track 3 ms; Settling 15 ms; Average 91 ms • Head Load Time: 35 ms • Disk: Diskette 2D or equivalent

#### Programming Language Terms

Machine language, also called object code, is binary; it consists entirely of zeros and ones. Words made of zeros and ones represent both op codes, which define basic operations in the processor, and addresses of the data on which an operation is to be performed. The accurate reading and writing of machine language is difficult.

Machine-language statements that use the correct op codes for a specific processor are said to be the native code

for that processor.

Intermediate between machine language and higher-level languages like Pascal is assembly language. Assembly language substitutes standard mnemonics—more easily remembered names—for machine-language instructions. Statements in assembly language are not directly executable. An assembler is a program that translates assembly-language code into machine code; a macro assembler allows the programmer to use a single name to represent a sequence of assembly-language instructions. Assembly-language mnemonics vary from one processor to the next, and an assembly-language program written for one processor will not run on another.

A compiler is a program that translates the programmer's statement in a source language or higher-level language (such as BASIC or Pascal) into machine language. The resulting machine-language code needs no support software to run (except an operating system). Compilers process an entire program at one time; the resulting machine-language code can be executed only after the whole program is compiled.

Single-pass compilers complete the translation of a program in source language into machine language in a single, continuous operation. Multiple-pass compilers divide the process of translation into different stages. The advantage of multiple-pass compilers is that they usually reduce demands on main memory, though single-pass compilers work faster.

An interpreter is a program that translates each source-language statement into machine language as the statement is read and then immediately executes the machine-language

translation of the statement.

Some higher-level language implementations such as CBASIC (from Compiler Systems) and Pascal/M compromise between the compiler approach and the interpreter approach. These implementations compile source code into a nonexecutable intermediate code; a separate interpreter must then be run to execute the intermediate code. The intermediate code produced by a Pascal compiler is called P-code. Unlike assembly language, P-code is the same for different versions of Pascal that use the intermediate-code approach.

A linker is a program that combines into a single module two or more program segments that have been separately compiled.

A program library is a set of programs distributed with a program language to provide code to perform frequently used operations. Programmers save time and labor by incorporating code from the library in programs under development. A linker can incorporate library program segments into a program whose other segments were written by an applications programmer and separately compiled.

# AT LAST... A catalog of business software programs that are easy to use, and easy to business

Here's a FREE catalog of serious business software for today's most popular microcomputers. You'll find programs for accounts receivable, payroll, payables, managerial forecasting and more. Each program has been thoroughly tested, whether it's a popular best-seller... or an exciting new application. And each program is complete with all the matching business forms and accessories you need!

A wide selection of proven software programs, at direct-by-mail savings...it's like having a convenient personal computer store at your fingertips.

To receive your FREE catalog, simply call Toll Free 800-323-0628 (In Illinois, call 312-377-0990) or circle Reader Service Card number below.

# len reasons a BASF Flex

More than four decades of experience in magnetic media – BASF invented magnetic recording tape, the forerunner of today's wide range of magnetic media, back in 1934, and was the first independent manufacturer of IBM-compatible floppy disks.

Tough Tyvek sleeve—no paper dust, no static electricity.

Special self-cleaning jacket and iner help eliminate data errors and media wear and tear.

Packaging to suit your requirements - standard flip-top box, Kassette 10® storage case, or bulk pack.

Center hole diameter punched to more accurate standards than industry specifications, for top performance.

> 100% certification - every single disk is tested at thresholds 2-3 times higher than system requirements, to be 100% error-free.

Bi-axially oriented polyester substrate - for uniform and reliable performance year after year.

**BASF FlexyDisk** 

Double lubrication - lubricants both in the formula and on the

disk surface, to minimize media wear due to head friction.

Cross-linked oxide coating-for

low head wear and long trouble-

Total capability - one of two manufacturers in the world that

makes both 8" and 5.25" models,

manufactures floppy disk drives.

has tape and disk experience, and

free media life.

For the name of your nearest supplier, write BASF Systems, Crosby Drive, Bedford, MA 01730, or call 617-271-4030.

#### Pascal Updates

Each Pascal has been revised and improved in the past few months. All of the vendors claim bug fixes, increased speed for low-level support routines, and better user interfaces. We were unable to test the new versions. Version numbers and prices were current as of October 1981.

#### Pascal/Z Version 4.0

An interactive debugger and the ability to segment programs are the major additions to Pascal/Z. The debugger is fully symbolic. Among other things, you can symbolically display and modify local and global variables (including record fields), trace program flow, and display run-time memory requirements.

Overlays, or segments, are compiled separately like modules. They are then processed by a system program that prepares the memory maps and relocation information needed by a host that uses the overlay. Finally, they are linked to the host.

Version 4.0 costs \$395. The cost of updating from Version 3.3 is \$50; new manuals are included in the update.

#### Pascal/M Version 4.02

Major enhancements to Pascal/M are an interactive symbolic debugger, the ability to perform 14-digit BCD arithmetic, and an increase from 10 to 40 in the number of program segments permitted.

#### Pascal/MT+ Version 5.5

Several changes have been made to Pascal/MT+ to increase its power and compatibility with other CP/M software. The compiler has been reduced in size by 7K bytes, substantially adding to the amount of symbol table space for compiling user programs. Users can compile larger programs than were heretofore possible.

A converter program has been added to the collection of utility programs. The new program converts code files produced by the compiler to a format acceptable to Microsoft linkers. Overlays are now allowed. A program is permitted 16 overlay "areas" with up to 16 overlays per area. The programmer is burdened with supplying code address information to the linker before the overlays can be used by a host program.

The new version can be purchased with a speed programming kit that consists of a menu-driven program whose op-

tions include a screen-oriented character editor, a Pascal syntax scanner for preprocessing program texts, and an identifier frequency counter. The latter can be used, for example, to spot identifiers referenced only once in a program, such as uncalled procedures or unreferenced variables.

The manuals have been rewritten with improved indexes. Version 5.5, including the speed programming kit, is \$475.

#### **UCSD Pascal Version 4.0**

(Note: Version 3.0 is specially designed for Western Digital's Microengine.)

Major enhancements to UCSD Pascal include an increase in the number of segments and units allowed to 255 and easier compilation and cross-referencing of units, facilitating the development of very large application programs. Programmers can also control the residency of segments and units in memory through calls to intrinsic procedures. Overlay segments can be protected from being overwritten by other segments until the programmer permits, and potentially time-consuming, annoying disk I/O (due to repeated calls to a segment) can be defeated. Chaining is also permitted in Version 4.0.

Procedures for memory management have also been augmented. One of these permits a form of dynamic arrays and should considerably increase the ease of development for libraries of procedures operating on arrays.

Concurrent processes have been implemented in Version 4.0. Concurrent processes, or tasks, are controlled by "semaphores" (a term coined by E. W. Dijkstra), which synchronize tasks and control access to critical code sections and resources. Semaphores can be associated with hardware interrupts so that interrupt handlers can now be written in UCSD Pascal.

Intrinsic procedures for redirecting program and system I/O have been included. Redirection of system I/O means that the system can be driven from a script in a manner similar to CP/M's SUBMIT facility. Redirection of program I/O enables the programmer to collect the input to (or output from) a program from any peripheral device or disk file.

Additions to the system's utilities include an interactive debugger, a procedural cross-referencer, and a console screen control unit. The documentation has also been completely rewritten.

Version 4.0 costs \$500. Preconfigured versions are available for a variety of machines.

# Industrial marketing problems?

Regardless of what marketplace you are staking out, its position or size, we can help you draw a precise circle around it.

Why? Because as the leading business/technical/prolessional publishing company, we probably already know your market and can apply our expertise to your research needs.

Give us a call Phone Ann Graham-Hannon at 212-997-6401 or write her as Director, Marketing Research, McGraw-Hill Research, 1221 Avenue of the Americas, New York, NY 10020.

# Call McGraw-Hill Research

If it's a marketing research problem, we probably ploneered the solution.

# Now... Multi-User, Multi-Tasking Distributed Processing Systems ...at Personal Computer Prices

Now you can utilize the storage capacity, access speed and reliability of Winchester disk technology . . . and the economy and portability of floppy disk systems with the Columbia Data Products' single and multi-user, multi-tasking 1500/1800 microcomputer series.

The 1500/1800 product line provides a complete selection of 5 ¼ and 8 inch floppy and Winchester disks, Z-80A microprocessor architecture, up to 256K RAM and DMA disk controllers. Two parallel ports allow for interface of high-speed peripherals such as printers and expansion storage, and six RS-232 ports give you up to five user stations in a true CP/M® and MP/M® operating system environment. The sixth RS-232 port is available for modems, serial printers or an additional CRT station.

With our new microcomputer series, you can configure your system solution by selecting the terminals and printers best suited for your application based on cost, appearance, performance and such features as intelligence, video attributes, graphics (both black and white and color), and ergonomic factors...you need not compromise any longer.

Cost effectiveness, versatllity, performance superiority, hardware expandability, and application flexibility are now yours from Columbia Data Products.

And prices start under \$900\* list per user . . .

Price excludes display terminals and printers.

# Microsoft's BASIC Compiler for the TRS-80

Mahlon G. Kelly 268 Turkey Ridge Rd. Charlottesville, VA 22901

#### At a Glance

**BASIC Compiler** 

A BASIC compiler package, including a compiler, linker, routine library file, and run-time package

#### Manufacturer

Microsoft Consumer Products 400 108th Ave., Suite 200 Bellevue, WA 98004

#### Price

Model I, \$195

#### Format

Model I, 5-Inch floppy disk; (also available for the TRS-80 Model II)

#### Language

Z80 machine language

#### Computer needed

TRS-80 Model I, minimum of 48 K bytes of memory and one disk dente

#### Documentation

More than 200 pages in a three-ring binder

TRS-80 BASIC programmers who want to increase the speed of their programs

Do you have friends who tell you that BASIC is a toy language or that it's only for beginners and those too lazy to learn more "sophisticated" languages? Such snobs seem to fall into one of three categories; the machine- or assembly-language fan who wants to commune directly with the hardware and keep track of where every bit goes: the structured-program maven who feels that the machine must force a person to write well-organized programs; and the traditionalist who still thinks that the only "real" higher-level languages are FORTRAN, COBOL, and ALGOL.

Machine and assembly languages are essential when you need fast execution that can't be accomplished with a higher-level language. Structured languages like Ada and Pascal make it much easier to monitor long, convoluted programs.

But we should listen carefully to the traditionalists; they probably learned to program on an IBM 650 in 1956 and have sage minds. Most of them will tell you that FORTRAN, COBOL, and the like are superior because they are compiled languages that use a computer much more efficiently. They forget that BASIC-originally written at Dartmouth College as a simple beginner's language for easy interaction with the computer—is now at least as sophisticated and as easily compiled as older languages.

# IBM'S DOS or CP/M-86?

Confused about operating system options for your IBM Personal Computer? HAVE IT BOTH WAYS WITH LIFEBOAT'S CP/EMULATOR<sup>TM</sup>, CP/EMULATOR solves the problem by permitting you to use all the software written for IBM's PC for both DOS and CP/M-86.

This high performance, low cost DOS utility allows you to fully integrate and mix programs. You can use a DOS editor to write a program, compile it under a CP/M-86 compiler and execute the finished application under DOS.

CP/EMULATOR extends the scope and capacity of all of your software. With CP/EMULATOR, CP/M-86 programs run quicker with faster file access than with CP/M-86 itself.

Additionally, your program will enjoy all the other DOS advantages, such as large file size, dated directory displays, and more. The DOS peripherals are already installed and DOS commands are fully available. The package even contains a utility program to transfer programs and data files from a CP/M-86 diskette to a standard DOS diskette.

NO NEED TO LEARN A NEW SET OF UTILITIES AND COMMANDS:

NO NEED TO END UP WITH TWO INCOMPATI-BLE SETS OF DISKETTES:

NO NEED TO SPEND HUNDREDS OF DOLLARS ON CP/M-86, WHEN CP/EMULATOR COSTS \$75.

NO NEED TO WONDER WHICH OPTION IS BEST FOR YOUR IBM PERSONAL COMPUTER.

# PMATE: Editor-in-Chief

Perform miracles of manipulation on your keyboard with Lifeboat's PMATE.

This new generation text editor is the most sophisticated text editor available today and is bristling with features previously unavailable on microcomputers, making it ideal for virtually any program or data file editing.

PMATE's command set includes full screen single keystroke editing, horizontal scrolling, automatic disk buffering, macro command language, text formatting, expression evaluation, conditional branching, I/O with prompting, and other programming language constructs. PMATE makes use of 11 buffers for storage, and includes commands permitting work on more than one text at a time. Unique to PMATE is the facility for user customization. Keystroke functions can be redefined, and sequences can be programmed to directly execute macros. Video commands can be changed, and macro functions can be written, to emulate any other editor with which you may be familiar. PMATE provides full side-scrolling, and can be used with virtually ANY video terminal on the market. If you use an editor, you need PMATE.

PMATE is the only text editor you'll ever need.

PMATE-86 is available for IBM's Personal Computer DOS, SB-86<sup>TM</sup> and MS-DOS<sup>TM</sup> Also available is PMATE for SB-80 and other CP/M-80-compatible operating systems.

Lifeboat Worldwide offers you the world's largest library of software from its offices in the U.S.A., U.K., Switzerland, France, West Germany and Japan.

#### What It Does

A compiler is a machine-language program that translates a higher-level language, such as FORTRAN or BASIC, into machine code. This compiled program can be stored on disk and run as if originally written in machine language. On the other hand, an interpreter, used in many microcomputers with BASIC, "translates" each line of a program while the program is running. If a line is executed many times, it must be "translated" many times.

A compiled program is therefore much faster than an interpreted one and uses the computer more efficiently despite the lengthy compilation time (which need only be done once). Compilation also allows more flexibility and offers options unavailable with interpretation. Conversely, an interpreted program can be run immediately, without waiting for compilation, and thus is much easier to debug, edit, and modify. Although this may be a poor practice, it is a good way to learn programming and is usually necessary to refine a moderately long program.

Microsoft's BASIC compiler gives you the best of both worlds. It is now possible to debug and modify a program using the TRS-80's built-in interpreter. Then, when it's doing just what you want, it compiles the program to get rapid execution.

I've often wished I could do that with FORTRAN on our university's Cyber 172; in fact, I have been known to write and rewrite a program in interpreted BASIC until it did what I wanted, then translate it "by hand" into FORTRAN for fast execution.

We can evaluate the Microsoft compiler in five ways: ease of use (and quality of documentation); compatibility with TRS-80 disk BASIC; speed; added features compared to interpreted BASIC; and any special quirks, bugs, or problems that may get in the way.

This compiler has many versions; the one I review here is the latest available for the TRS-80. It is much improved over that machine's first version, and anyone with the earlier version can obtain an update from Microsoft for a nominal charge.

#### Procedures for Use

The compiler is very easy to use, although that's not conveyed in Microsoft's documentation. The compiler is really a package of four software modules: the actual compiler (BASCOM/CMD); a library file (BASLIB/REL); a linker (L80/CMD) that links machine code from the library file to the program as compiled by BASCOM; and a "run-time package" (BRUN/CMD)

VTSA

# YOU CAN'T BUY A FASTER S100 BUS SYSTEM

# Presenting the LDP 1/2 S100 Bus System:

#### Standard features:

Lightning One CPU

- ☐ 2 Serial Ports
- 2 Parallel Ports
- ☐ 128K RAM 600K bytes floppy storage MS-DOS\*\* or CP/M-86\*

# operating system Options available:

- ☐ 10 MHz 8086
- 8087 8089 co-processor (onboard, not tacked on)
- ☐ 128K static RAM
- ☐ Multi-user option including MP/M-86\*
- ☐ 1.2M bytes disk storage
- ☐ 2.4M bytes disk storage
- ☐ 11.2M bytes disk storage

The LDP 1/2 system incorporates the fastest \$100 bus CPU, the Lightning One, when coupled with our other fine board products offers a level of performance comparable to many large 16-bit minicomputers. Our multi-user system doesn't lose steam as with other 8-bit systems.

In addition to Lightning performance, Lomas Data Products has the widest selection of operating systems software. We offer both MS-DOS\*\* and CP/M-86\* for single user systems and MP/M-86 for multiuser systems. A wide variety of high-level languages are available including: BASIC (interpreter and compiler), FORTRAN, PASCAL, COBOL, C, and FORTH. Call or write for our benchmark comparisons with other systems.

We have saved the best for last: Our standard system, the LDP 1 with 600K bytes of disk storage is available for just \$4150.

Dealer and OEM inquiries invited.

For 16 bit computing on the S100 bus, come to the leader...

# The Landlord

# Apartment Management Software

Keeping track of apartment availabilities, rent payments, security deposits, leases and other administrative functions consumes a great deal of time and attention for apartment owners and managers. You and your staff probably spend countless hours dealing with the paperwork necessary to manage your property.

With the Landlord apartment management software and an Apple II computer, file cabinets full of paperwork and the frustrations of cumbersome bookkeeping procedures can be eliminated. The clerical work for your apartments can be accomplished with greater accuracy in a fraction of the time you presently spend. The Landlord will keep up-to-date files an apartments and residents as well as detailed records of property income and expenses.

You'll be able to enter, change, or delete Information by following the simple English instructions that appear on the screen of the Apple It\*. With the Landlord™, your resident manager can instantly determine where apartment vacancles exist and when additional units will become available for rental. The Landlord™ also keeps track of resident payments, letting you see at a glance who is behind on rent or other payments. Property and tax analysis reports are printed automatically each month and allow you to monitor the profitability of your apartments.

# NEW PRINTERS. NEW PERIPHERALS. SAME OLD RELIABLE QUALITY AND VALUE.

1982 will find more OEM's, businesses, dealers and personal computer users turning to MICROTEK than ever before.

## **TekWriter-1**

#### 80 Column Dot Matrix Printer (Formerly BYTEWRITER-1)

The Tekwriter-1 printer is, dollar for dollar, the finest value in the industry. And we've proved it by comparing the Tekwriter-1 to the Epson MX-80. Our print speed is 14 lines per minute faster, our life expectancy is longer, the character sets are the same, and the interface, warranty and printhead replacement cost are all identical.\* But the biggest difference is the price. The Tekwriter-1 is about \$300 less.

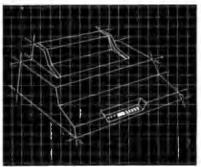

Our extensive testing has proved that the Tekwriter-1 interfaces problem-free to most parallel Centronics and serial (RS-232) computers.

The Tekwriter-1 is tough to beat for performance and quality.

\*Dala Source: Epson MX-80 Operation Monual

Parallel \$349 Serial \$389

# TekWriter-2

#### NEW! 80/132 Column Dot Matrix Printer

The Tekwriter-2 is perfectly suited to personal, business or OEM applications. Tekwriter-2 is designed to accept single sheet, roll or pin feed paper. It has a 9-wire dot matrix impact print head which produces crisp characters and has underlining capability. The printer is manufactured to run extremely quietly even while operating at peak output levels.

Tekwriter-2 is especially well suited to handle word processing applications because of its data buffer expansion capabilities to 25K. This ability makes it an efficient graphics generator.

Parallel interface (Centronics type). Interfaces all models of TRS-80, Apple, and Atari 400/800, and most computers with Centronics printer interface.

\$695

with additional machine code accessed by the linked program while it is running,

Compilation is best understood by following a program through the whole process. Programs are compiled in many ways, but the following procedure is used in almost all cases. (Other options, invaluable when needed, are rarely used.) First, write and debug a BASIC program (see listing 1). The program is then saved as an ASCII file, using the command:

#### SAVE "TEST1/BAS",A

(My most common error is forgetting to save it as an ASCII file; also, the BAS extension is needed for recognition by the compiler.) After returning to the DOS with CMD"S", the program is compiled by typing the command:

#### BASCOM TEST2, TEST3 = TEST1

This will produce a listing file (called TEST3/LST) of the compiled code in assembly language (see listing 2) and a partially complete and relocatable machine-language program (called TEST2/REL) that must be linked to other machine code using L80. TEST1/BAS was the BASIC source program.

Error diagnosis is excellent—any errors in the BASIC source code will be listed to the screen and shown in the listing file (see listing 3). The command:

#### L80 TEST2.TEST4-N-E

will link machine code from BASLIB/REL and produce the file TEST4/CHN (for chain) from TEST2/REL. The "-N" and "-E" are "switches" that in turn tell L80 to write the /CHN file to disk and exit to DOS. A variety of other switches are available for L80 and BASCOM. Again, errors will be listed to the screen. TEST4/CHN can then be run as a machine-language program with the command:

#### **BRUN TEST4**

Obviously BRUN/CMD must be available any time the program is run, but the other programs are unnecessary. Other names could have been used for any file, and disk drive numbers could have been specified. Usually, all of the names are the same (e.g., TEST/XXX). In that case, we create files called TEST/BAS, TEST/LST,

# VICTOR ... Number 1 in Impact Matrix Printing!

- · Upper & lower case font
- Full graphics 480 columns per line
- · Top of form & horizontal tabs
- . True 60 lpm throughput
- Bi-directional friction and sprocket paper feed
- Large 360 character buffer
- Four interfaces standard parallel & RS232 & TTY & IEEE-488

TEST/REL, and TEST/CHN. If the compiled program runs correctly, the /LST and /REL files can be deleted.

Although the procedure I describe is used with three disk drives, the sequence is very similar using one or two drives, though disk swapping is necessary. Actually, the process is so cumbersome with one drive that Microsoft doesn't recommend it. (Microsoft also points out that, for almost all purposes, 48 K bytes of memory are needed.) Three double-density drives are ideal. I can use drive 0 for the operating system, drive 1 for the compiler software and Microsoft's FORTRAN and macro assembler, and drive 2 for the various programs.

At this point, the compiler may seem awkward. With practice, it's simple to use and any program needs compilation only once if interactively debugged. Also, the com-

pilation time is very short in relation to the run time if the program is to be run several times. There are some cases. however, when compilation is superfluous. For example, a program that spends most of its time with disk I/O (input/output) will gain little speed by compilation. On the other hand, a program that does a lot of iterative number crunching with little I/O will be greatly quickened. If you use short programs or those that wait a long time for I/O, a compiler won't help much.

#### Flexibility and Documentation

The compiler is designed to be very flexible; in fact, I can't fully describe its tremendous range of options. For example, subroutines written in Microsoft FORTRAN can be called from BASIC by using the command:

#### CALL SUBR (A.B.C)

where SUBR is the name of a subroutine in a compiled (but not linked) FORTRAN program and A, B, and C are variables to be passed to the subroutine as sequentially declared in the FORTRAN subroutine statement. You can write a personal subroutine library in FORTRAN that can be called from BASIC. The ability to write a user library of language-independent subroutines is usually found only on mainframe computers or very large minicomputers. Working with the compiler on a microcomputer is much less awkward than it would be on a large computer system. This means, however, that L80 must have a provision for specifying a FORTRAN program that will be searched for subroutines. In other words, flexibility means some complexity in compilation, and there are a wide variety of different procedures for compilation. For example, typing BASCOM and then after a prompt:

#### TEST2, \*PR = TEST1

sends the listing to a line printer. Many other features are too complex and lengthy to be described here.

Unfortunately, this flexibility and complexity mean rather unclear documentation. Microsoft has tried to describe all of the options, special features, and peculiarities of the system before a user becomes acquainted with the rudiments. In some instances, the system's complexity seems to have confused even the writer of the manual.

For example, in one section a COMMON statement is described in great detail, while another section tells us that it's not implemented. In another case, it gives an excellent table comparing Level II BASIC, disk BASIC, and "standard" Microsoft BASIC (BASIC-80) with compiled BASIC, but several statements and commands that are available in compiled BASIC (and BASIC-80) are

The manual is very complete and includes an introductory section (confusing); a technical section (also confusing) detailing the features of compiled BASIC; and the BASIC-80 manual that gives the syntax of statements not found in either Level II or TRS-80 disk BASIC, but with (distractingly) almost everything in the TRS-80 lan-

The 16 bit operating system designed specifically for business micro-computing. Application software?—it's here, NOW!

OASIS-16\*: the operating system designed for business. Not just a hobby or development system rewritten for business use, it is the natural evolution of OASIS\*\*\* the multi-user system with a world-wide reputation as the standard for those who take business seriously.

And here's more good news: there's no waiting for application software because what now runs on OASIS is upward compatible to run on OASIS-16. That means plenty of proven software, available immediately.

OASIS-16 puts it all in one package. For manufacturers: one source for operating systems, languages, tools; custom implementation to maximize hardware potential: international support & training: flexible licensing agreements. For software developers: complete portability keeps application software machine independent; integrated tool set makes development easier, faster. For end-users: user-friendliness; data security; portability simplifies system expansion; plus an extensive application software library.

Computing professionals have long told us 'QASIS makes micros run like minis' -with OASIS-16, it's truer than ever. And that's strictly good business.

\*For 6086-68000, 28000, LSI-11, & others. \*\*For Z80

THE CASIS-16 PACKAGE CONTAINS: Operating System, EXECUCA Language Editor Script Output Text Formatter Assembler Linkage Editor Diagnostic & Conversion Utilities; BASIC Interpreter & Compiler "C" Compiler.

guages described as well. I spent several days trying to decipher some simple features (like the CALL statement mentioned above), but everything I needed to know was eventually found within the several different sections. The software is easily used, but the simplicity is obscured by very confusing documentation. In fairness to Microsoft. I have seen much worse obfuscation in documentation from CDC, DEC, and IBM.

#### Compatibility

The package is compatible with TRS-80 disk BASIC. Disk BASIC is more forgiving in some things, like FOR . . . NEXT loops, but if you use legal disk BASIC the compiler will recognize everything (except, of course, things like EDIT and CLOAD). CLEAR is not needed by the compiler, but if it's in the source program it will be ignored and a nonfatal error message will be given (which may be ignored). Also, there's no provision for data I/O with tapes. There are a few other minor differences, but

almost any program written in standard TRS-80 BASIC will compile successfully. The reverse, however, is not true. The compiler recognizes many statements and commands not used by TRS-80 BASIC.

#### Speed

All compiled programs are much faster, but the compilation process itself takes some time. The trivial program in listing I took less than two minutes to compile and link. A game using 11K bytes took one minute and 46 seconds to compile and two minutes and 50 seconds to link without a listing file. With a BASIC listing file but no object code between the lines, compilation took two minutes and 11 seconds, and the listing file required about 14K bytes or 13 "grans," It was impossible to compile the program with object code; the listing file needed more than 100 grans of disk space. This is a problem with the compiler that's not mentioned in the documentation; object code listings may need more storage than is available on any blank disk. However, it's probably never necessary to get a complete listing file with object code. A "-N" switch after the BASCOM line will inhibit the obiect code.

Some differences in run times for various interpreted and compiled programs are given in table 1, which shows the execution times for statements placed in line 30 of listing 1. Speed increases vary from more than 40 times, with integer variables in simple functions, to less than three times faster using SIN, COS, and similar functions. Nevertheless, there's always a speed increase that varies depending on the program.

#### Special Features

Compiled BASIC has many features unavailable in interpreted TRS-80 BASIC. In fact, they're not all listed in the documentation. Table 2 gives the additional statements and commands, although they are too numerous to fully describe. For example, SWAP(A,B) exchanges the value assigned to the two variables, and transcendental functions will return double precision. Perhaps the most important are WHILE and WEND statements; they allow writing structured program code. Variables may be of any length; that is, the compiler will consider J, JOS, and JOSEPH to be different variables. This may pose a problem when compiling a program that uses variable abbreviations; the compiler may recognize more variables than were originally intended.

Microsoft's original BASIC compiler had many defects, but all of the problems seem cured in this new version. I have some BASIC programs that will not compile using BASCOM, but that's always because standard TRS-80 conventions were not used. For example, Radio Shack's backgammon game will not compile because it branches to subroutines from within a loop; that is disallowed but forgiven by interpreted BASIC, Also, some things may be mistaken for bugs. For example, I thought there were problems with linking because L80 is different for Microsoft FORTRAN and BASIC. But the two act the same if a "-R" switch is used with the BASIC version.

If you don't know a baud from a floppy...

Circle 329 on inquiry card.

I've yet to find any "real" bugs-only things that I either misinterpreted or didn't understand.

If you have code that you want to run faster, or if you need any of the features like a FORTRAN library, this is definitely a worthwhile product. If you're not accustomed to a compiler, compilation may be annoying. But this is a professional package, just as flexible and much easier to use than some compilers on mainframe computers.

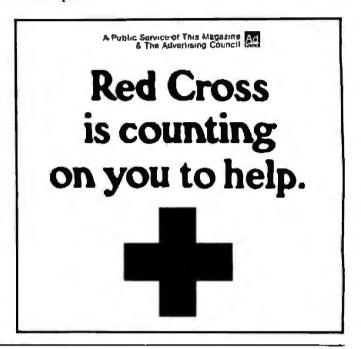

#### Conclusions

Microsoft's BASIC compiler allows compilation of any BASIC program written for a disk-based TRS-80. This results in a three to 30 times increase in execution speed. The system includes a compiler (BASCOM), linker (L80), routine library (BASLIB), and run-time package (BRUN). For most purposes, 48 K bytes of memory and two disk drives are needed. The package is nearly identical to the interpreter that Microsoft designed for the TRS-80.

The software is readily used by those familiar with a compiler and compilation is quick. The documentation is confusing but complete, and a novice should be operating the system within an hour. Full use of its very flexible and extensive special features will require several days' study, which would be reduced with better documentation.

There are more than 20 features in the package that are not available in disk BASIC, including structured loops and calls to FORTRAN subroutines. Because of ambiguities in documentation, full use of the features reguires long study and experimentation.

This is a very professional software package that gives the TRS-80 features found only on much larger systems. Except for the documentation, the package is superlative in all respects. ■

#### Give Your TRS-80\* a Tremendous Boost with RACET computes Software

RACET computes Utility Software makes the TRS laster, more efficient, and easier to use. Our programming alds improve your productivity. Our reputation is for products that are professional in design and work as advertised!!!

FIELD PROVEN HARD DISK DRIVES AND OPERATING SYSTEM Now you can use RACET's Hard/Soft Disk Operating SYSTEM
Now you can use RACET's Hard/Soft Disk Operating System (HSDS) with the
ARM Winchester Disk Drive on the Model II. This cost effective combination
provides 15 Megabytes per drive including ECC Error Correction Code and an
advanced sequencer to further ensure data integrity. An incremental backup to
floopy is provided so that only those sactors that were changed from the last
backup are saved. A full monthly service contract is available at \$30 per month DEL QUIVE

The HSDS Software has more than One Year's FIELD Experience. The latest HSDS version adds several enhancements including maintenance of system likes on the hard drive, files as large as the disk, the ability to segment the disk as logical drives, definable directory classe, and many utilities including bulk copies between floppy and hard drives, multiple purgs. Superap, and Directory Catalog System. Full program compatibility with TRSDOS 2.0a is maintained. Mixed lippy and hard drive operation is supported.

HSDS is available for the Cameo, Cynthia Bull, Corvus, Data Peripherals, and Santa Clara Systems hard disk systems as well as the ARM Winchester Drive. ARM 15 Megabyte Drive Subsystem \$3895, Cameo 5/5 Cartridge Drive \$5995. Cyni HSDS Software \$400. Cynible Bull 10/10 Drive

RACET COMPUTES

# 1-UPMANSHIP.

We opened our doors with two basic goals:

To distribute as many software packages to as many dealers as possible.

And to make money doing so.

Our success on both counts is the result of hard work, a positive business attitude and a recognition that you, as a retailer, have a right to be treated fairly and honestly by your distributor.

# We're 1-up for three good reasons:

- We always offer a wide selection of the latest and best microcomputer software packages available anywhere. (Why should you have to hunt for what you need?)
- Our dealer discounts start with quantities of 1. (Remember all those times you just wanted one or two to see how they'd sell?)
- We don't play The BackOrder Game. (If we can't ship your order within 48 hours we'll let you know, instead of hanging you out to dry.)

If there's anything else we can do for you, just let us know. Because we're 1-up and we intend to stay that way.

## Software Review

# LDOS—Disk Operating System for the TRS-80

Tim Daneliuk 4927 North Rockwell Chicago, IL 60625

The TRS-80 microcomputer has evolved from a rather simple, cassette-based experimenter's delight to a complex and powerful disk-centered system. With disks came the necessity of a DOS (disk operating system) for control and communication with the computer. The first DOS came from Radio Shack, but independent vendors have since released others. The latest of these is LDOS from Logical Systems Inc.

LDOS was created out of need. Lobo Drives International wanted to market a new disk interface for the TRS-80 Model I that supported not

only 51/4-inch floppy disks, but 8-inch and hard disks as well, Additionally, the floppy-disk interface supported both single- and double-density operation. At the time of the hardware design, no existing DOS could support this diversity of hardware. Therefore, LDOS was created. Originally, it started as a debugged and enhanced version of VTOS 4.0, However, the present version is essentially all new code. VTOS users will be quite comfortable with LDOS because the command structure and syntax of VTOS have been largely maintained. The present version of LDOS supports both the Radio Shack expansion interface and the Lobo LX-80 interface. It is compatible with TRSDOS 2.3. Also, it supports both the Percom Doubler and double-sided operation. A version of LDOS is also available for the TRS-80 Model III.

It is always difficult to review a software product of this magnitude. I hope I have successfully avoided the tendency to get lost in infinite detail, I will stress the highlights of the system based on extensive use of LDOS 5.0.2. on a Model I and limited use of LDOS 5.1 on a Model III. The features discussed reflect primarily LDOS 5.1, As this is being written, this latest version, called 5.1.1 for the Model I, has just been released. Therefore, the operating features of both Model I and Model III LDOS are identical.

#### The LDOS Command Library

TRSDOS 2.3 could be viewed as a subset of LDOS. Every TRSDOS command has been implemented, and most have been significantly enhanced, LDOS also provides many new commands never previously available on any one TRS-80 DOS. Table 1 contains a brief listing and descriptions of the major enhancements and extensions found in LDOS. The major features are described below.

If you do any assembly-language programming, you will find the LDOS extended DEBUG a tremendous tool. All of the old commands are included, but many new ones have been added, too. Some of the extensions are:

- enter data directly into entire sections of memory
- ofill a block of memory with a specific byte
- jump over a byte in program execution
- •locate first occurrence of a specific byte or word in memory
- print a block of memory
- esend or display a byte to or from any I/O (input/output) port
- etype ASCII (American Standard Code for Information Interchange) characters directly into memory
- compare two blocks of memory

There is also a disk read/write utility that allows reading or writing to any sector of any disk, even the directory

The fact that LDOS supports hard disks and 8-inch floppy disks is evident in the changes to the DIR (directory) command. An unconditional call for a disk directory on a 10-megabyte hard disk would be a messy proposition. LDOS allows directories

# We have ways...

# to make it talk!

Give your computer the magic of speech with an ECHO™ Speech Synthesizer!

There are four new models to choose from: the ECHO 80 (TRS-80 models I & III), ECHO 100 (S-100), the ECHO GP (generalpurpose, serial/parallel) and the ECHO SBC (single board computer).

These join the popular ECHO ! (Apple).

ECHO Speech Synthesizers use LPC synthesis pioneered by Texas Instruments, combined with a phoneme-based operating system to provide any vocabulary you desire while using a minimum of your computer's memory.

The TEXTALKER Speech Generator, standard with all ECHOs except the SBC, translates normal English text to speech automatically.

Simple commands allow you to select from:

- 63 different pitch levels
- Words spoken monotonically or with intonation
- Fast or slow speech output
- Entire words pronounced or spelled letter by letter
- Different volumes
- Spoken punctuation if desired

Speech applications are virtually unlimited, ranging from education to games to aiding the handicapped. The flexibility and low price of ECHO Speech Synthesizers make them the logical choice when adding speech to your system.

For more information see your dealer or contact:

STREET ELECTRONICS CORPORATION 3152 E. La Palma Avenue, Suite D

Anaheim, CA 92806 Telephone: 714/632-9950

by class and date. For example, a directory of only files with the extension "/TXT" could be shown. Or all files created on, before, or after a specific date could be shown. This is a real time-saver when you are trying to find a specific file in a full disk. Any DIR command also shows the amount of free space in kilobytes on a specific disk, as well as the usual disk name, creation date, and drive number.

The LINK and ROUTE commands are very sophisticated and offer features normally found only on minicomputer and mainframe operating systems. LDOS is a device-independent operating system. Each peripheral is seen by the operating system as a DCB (device control block) in memory independent of the actual hardware. This means that data can be transferred between peripherals (called devices) in any manner you want. Additionally, so-called dummy-devices can be created so that data intended for one destination can be made to go elsewhere (a disk file, for example). In essence, deviceindependence allows you to redirect I/O any way you like without having to rewrite the machine-language I/O drivers. This may sound terribly complicated, but it is extremely easy to use and offers unbelievable versatility.

The ROUTE command allows you to change the destination of data. For example, routing the video to the line printer forces anything normally displayed on the screen to be printed on the printer, Another application for ROUTE is to send anything from the RS-232 serial port to a disk file, instead of the screen, when the computer is unattended, LINK is similar to ROUTE in function. However, instead of redirecting data to another device, it simultaneously adds a second (or third, or fourth . . .) destination device. This would allow you to send anything appearing on the screen to the printer, too, or vice versa. I have a disassembler that only goes to the screen. By linking the video display to the printer, the disassembled code appearing on the screen is simultaneously sent to the printer.

thus providing hard copy. The LINK command takes 10 seconds to type in; writing a new I/O driver could have taken days.

The SPOOL command has many uses, but its greatest application is when long printouts are required. Rather than tving up the computer completely while printing, SPOOL sends the data to be printed to a buffer located in memory or on a disk. Then, as the computer has time (in between keystrokes, for example), the data are sent to the printer. You can choose the size of the buffer, as well as whether to spool to memory or the disk. When using SPOOL, it seems that the TRS-80 is doing two things at once. However, it's just using time much more efficiently! Small-business users will love this feature because you can print a long report or a general ledger and use the computer for other things at the same time

A final highlight of the LDOS library is the SYSTEM command, This allows you to customize LDOS for a particular installation. The diskdrive stepping rate, blinking cursor, keyboard type-ahead, and break key disable are but a few of the many features that can be configured. The final configuration can then be saved. Each time that LDOS system disk is booted, the configuration is also loaded. SYSTEM will be a real favorite with a single-drive user because it allows you to load many of the "/SYS" files into memory. This in turn frees a great deal of disk space for data. It also has the effect of speeding up disk I/O since overlays are not being called from the disk. Potentially, you could have the full operating system at your disposal, and about 60K bytes of disk space in a single-drive, single-density, 35-track system. Finally, SYSTEM allows you to reassign which physical drive is logical drive 0. You must load LDOS the usual way, but after that anything goes. This will find application among Model III users who have a 35-track drive left from their Model I. By making this external drive the system drive, the two higher-capacity 40- or 80-track drives in the Model III

APPEND	Can ECHO to screen while appending, and can back up 1 byte in	
ATTRIC	destination file to merge Scripsit files.	
ATTRIB	Can make files VISIble and INVisible.	
AUTO	Can disable BREAK key.	
BOOT	Software reset "button," Reloads LDOS.	
BUILD	Creates ASCII or HEX files for PATCHing, JCL, etc.	
COPY	Simplified syntax. Can specify LRL. CLONE attributes of source file. ECHO characters to screen while copying, Single-drive copy from non- system disk.	
CREATE	Preallocate disk space for a file in either kilobytes or number of	
OFICATE	records.	
DEBUG	Extended significantly (see text).	
DEVICE	Shows all important disk-configuration data.	
DIR	Extended significantly (see text).	
DO	Used to execute JCL file.	
DUMP	Will dump in ASCII. End of text marker can be specified.	
FILTER	Modify I/O flow.	
FREE	Shows amount of space used and available, creation date, disk name,	
	number of directory entries used and available, free space in K, and space map. Can be sent to printer.	
LINK	Change I/O flow (see fext),	
LIST	Can number lines, dump in HEX, expand tabs, begin at specific record or line number, specify LRL, and output to printer.	
LOAD	Can load from a nonsystem disk in single-drive systems.	
MEMORY	Can show or modify top of memory. Can display, jump to, or modify specific memory locations.	
PURGE	Multiple kill of files.	
AESET	Reconnect peripherals to standard I/O drivers.	
ROUTE	Modify I/O flow (see text).	
RUN	Execute file from nonsystem disk on a single-drive system.	
SET	Connect device to new I/O driver routine.	
SPOOL	Data spooler (see text).	
SYSTEM	Configure system parameters (see text).	

Table 1: The major enhancements of LDOS as compared to TRSDOS 2.3. Not all library features are listed here.

# Gain instant access to over 1,200 information and communication services for as little as \$4.25 an hour.

They're all at your fingertips when you join The Source, SM America's Information Utility.

The Source can improve your efficiency, speed your work, and reduce expenses in your organization by giving you access to personal and business services that run the gamut. From electronic mail and discount buying services to stock reports and hotel reservations. And in most cases, you can reach The Source with a local phone call using any standard microcomputer, communicating word processor, or data terminal.

> SourceMail<sup>SM</sup>...faster than U.S. Mail, cheaper than most long distance calls.

SourceMail is an electronic mail system that lets you send messages to other Source subscribers, anywhere in

the country. Use it to communicate with your field offices or traveling sales representatives. Create your own network to clients, associates, outlets or suppliers. Store information for later retrieval

Best of all, communicating through The Source can be cheaper than any other method...including long-distance phone. Telex, facsimile, express mail, or messenger.

Streamline your business operations.

Just feed The Source your figures and it will calculate your taxes, cash flows, equity capital, lease vs. equipment purchase, loan amortizations, annual interest rate on installment loans. depreciation schedules. Use its Model 1 service for financial planning, simulation, and analysis.

You can use The Source's powerful mainframe computers to write and store your own programs, with computer lan-guages like BASIC, COBOL, FOR-TRAN, RPGII and assembly language. Naturally, we give you a private access code so your programs and data inputs

Your electronic travel agent.

Plan your trips with instant national and international flight schedule infor-mation. Use The Source Travel Club<sup>SM</sup>

to arrange airline tickets, rent a car, and make hotel reservations. Use The Source to check the weather ahead or find the best place to eat using our electronic Mobil Restaurant Guide.

#### Instant access to the stock market.

Whatever your investments stocks, bonds, mutual funds, T-bills, commodities, futures or others - The Source will give you updated investment information 22 hours a day. We go beyond mere market quotes to add economic. business, and financial commentary by noted economists and securities analysts.

Get news, hot off the UPI wire.

Around the world or around the corner, find out about the latest news straight from United Press International. You can select only the news, business reports, sports or features you want... geographically, by date, or subject matter. Get the latest update within 21/2 minutes of a filed report, or go back to earlier coverage.

That's just the beginning.

There's so much more. The Source has an electronic personnel search network. It lets you barter your goods and services with other businesses. Orders hard-to-find technical and business books direct from the publisher. Gives you a daily review of Washington activities. Lets you order thousands of business and consumer items at discount prices. Maintains your stock portfolio. And we're improving and adding to our subscriber services every day.

Anyone can use The Source.

You don't have to know computer languages or have programming skills. The Source operates on simple, logical English commands. It comes with a complete user's manual, categorized directory, and private sign-on codes.

The Source isn't limited to your office. You can access it from home, or on the road, 22 hours a day. Use it to catch up with office work, or for selfimprovement and family fun. The Source will play bridge with you, coach your children in foreign languages, help select dinner wines, give you the latest movie reviews, and more. It's amazingly versatile.

The value with the guarantee.

For all the communications and information services, you pay only a \$100, one-time subscription fee and \$18 per hour during the business day when you are actually using it. From 6 P.M. to midnight and on weekends and holidays The Source is just \$5.75 an hour. From midnight to 7 A.M. the rate drops to \$4.25. Minimum monthly

> usage charge is only \$10. What's more, we're so sure you'll find The Source just what you need, we offer a 30-day money-back guarantee. If you're not completely satisfied,

write us and cancel. We'll refund your \$100 hookup fee in full, without question. You pay only for time actually used.

See your computer dealer, mail coupon, or call for free brochure.

To learn more about THE SOURCE, visit one of the more than 800 independent computer stores that offer THE SOURCE. Or get our free 16-page color brochure and index of over 1,200 Source services now by mailing the coupon or calling toll-free 1-800-323-1718 (In III. call 1-800-942-8881) and ask for Operator 91.

Find out how much THE SOURCE can do for you.

are free to handle data disks.

#### **LDOS Utilities**

LDOS includes the familiar BACKUP and FORMAT utilities, which have been greatly enhanced, plus several new utilities. As with the command functions, BACKUP and FORMAT provide support for larger disk drives. BACKUP by class can be invoked, for example, to back up only nonsystem files. FORMAT provides the necessary functions to format disks of various sizes, densities, and single- or double-sided usage. As with most sophisticated operating systems, LDOS requires that a disk be formatted before a backup is allowed.

CMDFILE is a utility that allows the transfer of files stored on tape to disk, or vice versa. Where necessary. the utility will offset program locations from the tape version to insure that no conflict with the operating system is encountered. Disk-to-disk transfers are also supported. The PATCH utility allows modification of disk files to make minor changes or repairs without having to rewrite the entire file. Model III LDOS comes with a CONV utility to convert Model III TRSDOS disks to LDOS.

A final utility of interest is LCOMM. It provides communications software compatible with both the Radio Shack and the Lobo LX-80 serial ports. This is not a "dumbterminal" program, but a full-blown communications package with features like file transfers and download-

#### LDOS Filters and Drivers

One of the unique features of LDOS is its ability to "filter" data. By loading an appropriate program, it is possible to modify data before they are sent to a particular device. Three such filters are provided with LDOS. but documentation is provided to help the assembly-language programmer write others. The KEYSTROKE MULTIPLY filter allows you to program any key to generate a phrase when pressed. I programmed some commonly used BASIC phrases into my keyboard. By pressing CLEAR and G together, the phrase GOTO is

generated. Another possible application for this filter would be to reduce complicated DOS commands to a single keystroke. LDOS does provide abbreviation for certain commonly used library commands such as FREE and DIR by means of the MINIDOS filter. The third filter is the PRINTER filter. Its features include adding a linefeed after a carriage return, specifying the number of characters to be printed on a line, and setting the left margin of the printed page.

Logical Systems is also releasing an entire disk of filter routines to be used with LDOS. This disk will sell for \$60. It has many extended features. such as redefining every ASCII character. This would allow, for example, translation from ASCII to another data code such as EBCDIC. Another filter on this disk allows decimal and hexadecimal arithmetic while in another program (EDTASM, for example).

LDOS has a provision for loading custom I/O drivers as well. With one command, it is possible to change peripheral control from the LDOS drivers to one you have written. An RS-232 driver is provided for applications involving the serial port.

#### Job Control Language

It is impossible to do justice to the Job Control Language (JCL) feature short of writing a separate review of it. This is essentially a way of writing programs using LDOS library commands. Let's say you want to load a disk, and from then on have handsoff operation while the computer updates your mailing list, realphabetizes it, and prints labels. Normally, you would have to type in four separate DOS and BASIC commands:

> BASIC **RUN "NEWDATA" RUN "ALPHABET" RUN "LABELS"**

In LDOS, you simply create a file with these commands in it (using the LDOS BUILD command or a text editor such as Scripsit). Then tell LDOS to DO this file and sit back! Program execution is automatic. JCL

# **Move Up to Tarbell**

## The Serious Business Machine

Do you have a small computer system that operates with mini-floppies and has limited storage capacity? Then it's time to move up to the Tarbell Empire Series System. Tarbell starts where small systems leave off, providing storage from I to 20 megabytes. This means Tarbell is capable of growing right along with your business. (It also makes sense to start with Tarbell if you're a first-time computer buyer.)

Tarbell is the serious general purpose business machine, backed by years of experience with disk systems. It gives you word processing, inventory control with bill of materials, mailing lists — all in addition to accounting applications: general ledger, payables, receivables, payroll with cost accounting and order entry. Whatever your need may be, Tarbell can provide the working software that gets the job done.

With the Tarbell System you get a Z80 4 Mhz CPU with memory management, timer and full interrupt capability, 2 RS-232 serial ports with handshaking, 64 K bytes of random-access memory, double density floppy disk interface, 2 double density floppy disk drives, cabinet, power supply, and cables.

The software includes: CP/M\*\* 2.2 disk operating system, Tarbell Disk BASIC, Tarbell Database System, and all manuals and documentation.

Tarbell also offers the MP/M™ Multi-User Operating System and 4 additional RS-232 serial ports.

The Tarbell Empire Series is delivered assembled, tested, and with a FULL six-month warranty on parts and labor.

And when you need even more mass storage, Tarbell also has a hard disk that's systemcompatible and provides easy back-up.

If your business is growing or you need more than a few hundred K bytes — it's time to move up to Tarbell. Call your local Tarbell dealer for competitive prices.

Jan Golfonics

The One-Stop Shopping Service

950 Dovlen Place, Suite B Carson, CA 90746 (213) 538-4251

CP/M and MP/M are trademarks of Digital Research

also has the capability of prompting the user for input from the keyboard, to make decisions, to wait for a specific time on the clock before executing, and many other features. One application could be running long business programs unattended at night. This feature alone is worth the entire package price.

#### LBASIC

As with Disk BASIC 2.2, LBASIC is an adjunct to the BASIC interpreter in the TRS-80. It is compatible with programs written in Radio Shack BASIC, but has extended features that significantly enhance the language.

LBASIC adds many new random and sequential file controls. One of the best is the implementation of the Blocked File mode. In this mode of operation, an LRL (logical record length) between 1 and 256 bytes per record may be selected. This means that although the physical record size is still 256 bytes per record, you can deal with logical records that are less

than this. Let's say you wanted to write a random-access file that contained nothing but names up to 32 characters long. Rather than FIELDing the buffer for eight separate data fields and writing 256-byte records, LBASIC allows you to have records that are exactly 32 bytes long as far as you are concerned, while maintaining actual physical records that are 256 bytes. Another random-access file control, OPEN, has been modified to allow the opening of a file only if it already exists or, conversely, only if it does not already exist.

The sequential file controls have been enhanced as well. It is now possible to write to the end of (append) a sequential file directly without having to first load the file into memory, modify it, and write it back to disk. As with the random files, OPEN can be made dependent upon whether the file does or does not already exist.

LBASIC implements some features that greatly enhance writing and debugging programs. The more commonly used BASIC commands such as AUTO, EDIT, and LIST have been reduced to a single-letter command, and it is possible to single-step through a BASIC program. To facilitate program documentation and debugging, LBASIC includes a powerful line-renumber command and a cross-reference generator.

Several totally new BASIC commands have been added, RESTORE lets you go to a specific line of a program rather than always to the first DATA statement. When chaining programs, it is possible to specify at what line of the next program execution is to begin. Variables can also be passed from program to program while chaining. Thus, it is no longer necessary to save the variables in a file and read them back in when the next program has been loaded. A final addition is the ability to reset the EOF (end-of-file) marker in a random file, effectively allowing you to make random files smaller at will.

A final enhancement in LBASIC is the extended use of the CMD com-

Any legal LDOS command that does not affect protected memory can be executed from within LBASIC. To do a directory, for example, simply type in CMD "DIR". You can also load "/CMD" files from LBASIC by typing in CMD "filespec".

#### Documentation

It is claimed that of the approximately \$100,000 spent on the LDOS project, the manual alone cost more

than \$25,000 to develop. This is not difficult to believe because LDOS has the best, most comprehensive documentation and manufacturer support I've ever seen for a microcomputer. In excess of 250 pages, the LDOS manual is plainly the work of professionals. It will bring particular joy to assembly-language programmers because all major system entry vectors are thoroughly documented and all old documented TRSDOS vectors

have been maintained. (I gained a great deal of insight into TRSDOS by reading the LDOS technical section.) The nontechnical user is by no means left out though. The manual is extremely readable and full of good examples.

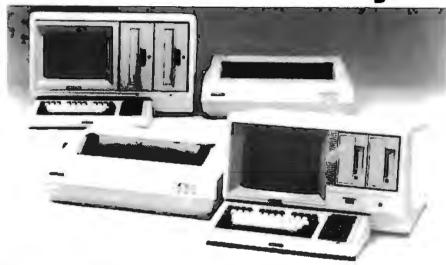

The documentation is further supported by a toll-free telephone number, an excellent update policy, a Micronet bulletin board, and a quarterly news magazine. The phonein customer service is available for four hours daily. The magazine is free for the first year. New releases of LDOS can be obtained by sending \$5 and the original master disk to the manufacturer. If you prefer, you can update LDOS by logging in to Micronet and copying the updated version at no charge. As newer versions of LDOS become available, existing owners will be able to upgrade to the new version for a nominal fee (depending on the nature of the new revision). In short, the LDOS documentation and support system have no peers. They can be expected to become the standard by which all others are measured.

#### Benchmarks

LDOS boots quickly and seems to operate quite efficiently. One of its nicer features is the fact that the realtime clock is kept on during disk I/O operation. While this keeps the clock much more accurate than other systems, it can lead to a rather mysterious problem, If the disk drive is turning at exactly 300 rpm (revolutions per minute), the interrupt for the clock can occur at the same time the directory track becomes available to be read. This can result in long waits during disk I/O. The problem is remedied by reducing disk-drive speed by several rpm. The first quarterly magazine includes a BASIC program that indicates drive speed allowing you to see if your drives need a slight readjustment. The 15 minutes it takes to do this minor correction is a small price to pay for the added clock accuracy, though, and the problem is intermittent and minor at most.

Listing 1 is the Benchmark program used to compare the speeds of LDOS F. HITHINITHIN

and TRSDOS. Table 2 is a summary of the results of that benchmark. For the Model III, TRSDOS 1.3 was used. The Model I benchmark presented a problem since TRSDOS 2.3 does not officially support variable LRLs (i.e., logical record lengths less than 256 bytes). The latest version, TRSDOS 2.3B, does support variable LRLs on the Radio Shack Compiler BASIC package, but not with the interpreter. Variable LRLs are partially implemented in TRSDOS 2.3 and 2.3B. but they cause errors to occur. In investigating this, I discovered that it was possible to write records in this file mode, but not to read them, Furthermore, the write procedure appeared to work fine, except that when the file was to be CLOSEd an error message appeared. Consequently, the timings given for TRSDOS on the Model I should not be treated as true benchmarks. They are included here only as a point of interest. It is interesting to note that, even with the errors being generated, the figures for the Model I and Model III are remarkably similar. This seems to indicate that, if Radio Shack ever implemented variable LRLs on the Model I, no significant improvement in efficiency could be expected unless the entire procedure was rewritten.

#### Summary and Conclusions

It is probably apparent that I really like LDOS. It is by far the most sophisticated piece of systems software available for the TRS-80 (and probably for any computer priced under \$5000). It offers unprecedented features, giving the TRS-80 new applications previously impossible without a massive programming effort, I had been considering selling my Model I and upgrading. After using LDOS, it became apparent that, while I might improve the hardware. I would be hard-pressed to come up with a more usable and better supported system in an affordable price range.

Specifically, LDOS offers these unique features:

•A user-oriented DOS that doesn't require in-depth technical knowledge to use well.

- A level of documentation and technical support almost unheard of in anything but minicomputers and mainframes.
- Virtually problem-free operation.
   In the months I have used LDOS, the only problem encountered was the disk-speed problem mentioned earlier.
- The possibility of true portability between members of the TRS-80 family, as well as some S-100 computers. Versions of LDOS for the Model II and certain S-100 computers are planned. These will probably be CP/M-compatible to some extent and will allow transporting data disks between any machines running under LDOS (provided the media are compatible).
- An exceptional bargain! If the in-

dividual features of LDOS were bought separately, the price would be near \$1000. The SPOOL feature alone would cost almost as much as the complete LDOS package.

It is difficult to conceive of a TRS-80 user who would not benefit from LDOS. In fact, the overall programming efficiency should at least double. Even if you are using another advanced DOS, it would be worthwhile to look into LDOS because its advanced features are yet to be rivaled in any one competitive operating system. If you are about to purchase a disk system or a new DOS, you'll find LDOS to be a professional, debugged, and efficient tool that will free your time and talents to write better applications software.

# Double your disk storage capacity...

# simply by switching to Omni's new reversible disk.

If you have an Apple, TRS-8O, Zenith, North Star or any other single-sided 5¼" disk drive, you can double disk capacity by simply switching to the Flip/Floppy disk from Omni. It works just like your present disks, except you can flip it over and record on the reverse side. So you can consolldate programs and files that used to require two disks. You can halve your disk requirements. And save money.

Each disk comes with some impressive specifications: They're certifled error-free at more than twice the error-threshold of your system. Rated for more than 12 million passes without disk-related errors or significant wear. And precision fabricated with such standard features as reinforced hub rings.

Call Omni toll-free today. Get premium disks. Twice the capacity. A full money-back guarantee. Unbeatable price. And if you order a ten pack now. a free \$5,00 storage case as well.

## **Software Review**

# COBOL for the TRS-80 Models I and III

Rowland Archer Jr. Flint Ridge Apartment 59 Hillsborough, NC 27278

COBOL on a TRS-80 Model 17 Yes. I was skeptical myself. Visions of COBOL's notoriously verbose source code rapidly filling memory and floppy disks led me to believe that Radio Shack had probably exceeded the limitations of the TRS-80 this time. I have been surprised in the past by some things people have converted from mainframes and minicomputers to microcomputers, but COBOL seemed like too much. Now, after substantial use of the system, I can happily report that Radio Shack's COBOL package is professionally done and well suited to the TRS-80.

COBOL is the most widely used programming language in the world, Over the years, the American National Standards Institute (ANSI) CODASYL committee has overseen the evolution of COBOL into a powerful language highly suited for business applications. It is particularly strong in its file-handling capabilities. Also, Radio Shack has announced that all the businessapplication software it develops in the future for the TRS-80 Model II will be done in COBOL.

Radio Shack COBOL (RSCOBOL) is a complete COBOL program development system. It implements a substantial portion of the ANSI X3.23-1974 COBOL Standard (the most recently approved standard). The package contains two 51/4-inch

floppy disks for the TRS-80 Model I and one for the Model III. My report is based on the use of the Model I system. The Model III version is supposed to be functionally identical.

The disks contain:

- 1. CEDIT, a line-oriented text editor for preparing COBOL source programs. This editor is similar to the one provided with the Model I EDTSAM (Editor-Assembler) package, with tab settings for COBOL and several additional commands.
- 2. The RSCOBOL compiler supplied in Z80 machine-language format. It produces an object file, listing file, and cross-reference list in a single pass over the source code.
- 3. The RUNCOBOL run-time package, including an interactive COBOL debugger. The output of the RSCOBOL compiler can be run immediately with no need to go through a linking/loading phase, such as the one required by Radio Shack's FORTRAN package.

#### At a Glance

#### Name **RSCOBOL**

TRS-80 COBOL development system

#### Author

Rvan-McFarland Corporation Software Products Group Aptos, CA 95003

#### Distributor

Tandy Corporation One Tandy Center Fort Worth, TX 76102 (817) 390-3583

#### Price 5199

#### Software

All software needed to run COBOL on both Model I and Model III TRS-80s, provided on three 5%-inch floppy disks. This includes a line-oriented text editor.

overlayed COBOL compiler, interactive COBOL debugger, and run-time package

#### Software Format

Model I version requires TRSDOS 2.3B, which is provided with the package; Model III version requires TRSDOS 1 1, which is also provided.

#### Computer

TRS-80 Model I or III with 48K bytes of RAM and at least two disk drives

#### Documentation

Concise but complete explanation of system operation, lengthy and thorough description of language; written in the style of a reference manual, not a tutonal: 36B pages.

#### Audlence

Programmers in need of a COBOL development system for the TRS-80 Model I or III

#### A New TRSDOS?

TRSDOS 2.3B is being provided with RSCOBOL, the new RSBASIC Model 1 BASIC Compiler, and the Series 1 Editor/Assembler. Each of these packages requires TRSDOS 2.3B and will not run under older versions of TRSDOS or other disk operating systems from alternate vendors (at least not at the time of this writing; the alternate DOS vendors will probably do something to remedy this situation).

Because of its dependence on certain features of TRSDOS 2.3B, the RSCOBOL package cannot be used without modification on systems that support double-density disk storage on the Model I, such as LDOS and NEWDOS/80, although the extra disk storage would certainly be useful for this package.

A utility, UPGRADE, is provided to convert a disk made with older versions of TRSDOS to run under 2.3B. However, once the disk is upgraded it can no longer be used with an older TRSDOS. UPGRADE also deletes any system (TRSDOS) files that happen to be on the disk being upgraded. Therefore, make sure you really want this to happen before you run the program!

The major change to TRSDOS is in the way it maintains the end-of-file (EOF) information in a disk's directory. The old systems maintained a 2-byte count of sectors in use by the file, plus a I-byte offset of the last byte in use in the last sector. The new system maintains these 3 bytes differently. Together, the 3 bytes comprise a true total byte length of the file; if the EOF offset byte is not zero, the sector-count byte is one less than it was under the old system.

Ironically, this is the way Apparat's NEWDOS systems have always maintained the EOF internally. It was a "correction" to TRSDOS 2.1 noted in the documentation for NEWDOS 2.1, released more than two years ago. NEWDOS systems, however, convert the EOF data to be compatible with TRSDOS 2.3's "incorrect" method when they write the EOF to the disk directory. This makes NEWDOScreated disk files compatible with TRSDOS 2.3 and earlier systems, but incompatible with TRSDOS 2.3Bwhich uses the NEWDOS EOF method not only internally, but also in the disk directory. If you are confused, imagine the fun this creates when you have disks generated by both systems in your library!

In practice, this means that any machine-language program that does physical record disk I/O and maintains the EOF pointer itself will not function properly under TRSDOS 2.3B. For example, you cannot use Radio Shack's Scripsit to edit RSCOBOL source files without using a utility to move the files back and forth between TRSDOS 2.3 and 2.3B disks. However, Radio Shack provides only a utility for converting all the files on a 2.3 disk to 2.3B format. It is unfortunate that Radio Shack had to make these changes to TRSDOS, as they will certainly cause lots of confusion for thousands of TRS-80 users. /Editor's Note: TRSDOS 2,3B is not a replacement for TRSDOS 2.3. Radio Shack says it is only required for use with the RSCOBOL, Series 1 Editor/Assembler, and RSBASIC Compiler packages. . . .SIW)

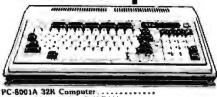

#### New TRSDOS

One of the biggest surprises of this package was the introduction of a new version of DOS (disk operating system) for the Model I, TRSDOS 2.3B. I had seen no mention of this upgrade when I purchased RSCOBOL. Although this new release is only slightly different from TRSDOS 2.3, one of its changes is significant enough to make 2.3B disks incompatible with any other TRS-80 disk operating system, including NEWDOS, LDOS, TRSDOS 2.3, and its predecessors. This raises many "interesting" (read "painful") problems with file sharing between the various systems.

#### System Overview

The RSCOBOL system is heavily disk oriented. It requires two disk

Imprint yoftsoore 420 SOUTH HOWES FORT COLLINS CO 80521 TEL (300) 462-5574 drives. Since the compiler and the run-time module both use overlays, these disks must always be online during compilation and execution.

During compilation, the files in table 1 must be online. During execution of COBOL programs, the files in table 2 must be online. The best way to set up the disks in a two-drive system has the disk in drive 0 containing TRSDOS and either all the files needed to compile a program or all the files needed to run one. This allows the disk in drive 1 to be formatted as a "data disk," with all its space available for COBOL source code, object code, and/or the files used by applications programs. In fact, the disk containing both TRSDOS and the run-time system has enough space for a sizable COBOL object program, allowing drive 1 to be used entirely for data.

Unfortunately, Radio Shack didn't see it this way and its disks are set up differently. Only the run-time disk contains the TRSDOS system files. This disk does not contain the runtime debugger overlay, RSCBLD13/OBJ. That file is on the disk that must go in drive 1. The second disk con-

tains the COBOL compiler, all overlays, and the COBOL editor. It since this disk does not conta TRSDOS, you must have a disk cotaining TRSDOS in drive 0 while y are compiling. Where should you pyour COBOL source code and objected? Take your pick, but you must share space on the same disk weither TRSDOS or the compiler a its overlays.

Why the fuss about file placemen After all, can't you just use COPY move the files around to achieve more logical placement? Due to an explicable move on Radio Shace part, you can't. Although the disks a whole can be copied using BACKUP utility, all the COB system files are password protec and can't be copied individual Frankly, the logic of this escapes r There is no protection against pira as both disks may be copied fre with no restrictions. But the licens owner of the system is preven from moving individual files arou to increase the usefulness of system. Does anyone in Fort Wo care to explain this policy? It is eit a slip-up or Radio Shack is trying

File	Function	Size, GRANS

# ONE-STOP LEASING

at your FALS Dealer.

Your Ford Authorized Leasing System Dealer offers a comprehensive package of benefits designed to take the hassle out of leasing a car. Just purchase the parts of the package that suit you best. It's as simple as that.

The Ford Extended

Service Plan gives parts and service protection beyond the normal car warranty • FALS Maintenance Leasing. It means your car is cared for by Ford-trained professionals using the latest diagnostic equipment and tools • A Ford Auto Club membership provides you with

emergency road service reimbursement • Preferred Insurance Program. Your insurance can be conveniently arranged by your FALS Dealer. One-stop leasing. It's simple, comprehensive and hassle free. Just see your FALS Dealer for details.

Check your Yellow Pages for your nearest Ford Authorized Leasing System Dealer.

LOOK OUT WORLD HERE COMES FORD

Announcing the new quick and easy way to write custom business applications in hours instead of weeks.

At last, you can get a microcomputer business application development system that is designed for one purpose only . . . fast production of bug-free professional-looking custom business applications.

"Thinks" the Way Business Thinks Quic-N-Easi is the revolutionary screenformat-oriented application development system that thinks in terms of transactions, records and fields. The same way business thinks. Quic-N-Easi expects an application to include custom formatted key entry. It lets you set up the character, field, and record validity checks business wants by merely filling in the blanks, it automatically signals in real time when errors occur and "explains" what is wrong in plain English messages you select for each custom application.

#### Much Faster than BASIC

Quic-N-Easi programming is much faster than BASIC because the standard business applications (key input, file handling, and output reporting) are handled via pre-programmed parameter driven subroutines. To produce finished professional looking custom business programs, you merely:

Draw the	business	formats	directly
on the CI	RT in min	utes.	

Fill	in	the	blanks	for	field	attributes.
vall	da	tions	s. table	s. e	tc.	

invoke the Quic-N-Easi interpreter to check fields against tables, check limits, access data files, and perform business calculations, etc.

-	Optionally define file and output formats right on the screen.
	formats right on the screen.

Pays for Itself in a Week By eliminating the coding drudgery of writing screen, field, file, and format programs in BASIC, programmers are free to concentrate on the unique business aspects of each custom application. No professional programmer can afford to develop one more business application without Quic-N-Easi. The savings are so significant with Quic-N-Easi, it can actually pay for itself in only one week.

#### Gives You Much More than a Screen Builder . . . the Only **Complete Business Development** System for Microcomputers

Quic-N-Easi handles the entire application development job from key entry to final output. You get everything you need, including detailed documentation to begin writing professional programs the first day. You get . . .

-	A singularly	capable	Quic-N-Easi
	ecroon hulld	OT

sell more disk drives. [Editor's Note: Radio Shack replied saying that they have been using this same method of protecting their application software program files on all Model II software. They stressed that this does not represent a change in Tandy policy and emphasized that there are no restrictions on backups, only on copying individual files. . . . SJW]

For those who own disk editors such as Apparat's Superzap and are familiar with the disk-directory structure, it is a simple matter to overcome this problem by zapping the passwords. However, sensible use of the system should not be restricted to those with this knowledge.

# One of the biggest surprises was the introduction of a new version of DOS for the Model I.

On the positive side, all components of the RSCOBOL system appear to honor the high memory pointer address stored at location hexadecimal 4049. This is not documented, but by using a disassembler I found code referencing hexadecimal 4049 during the start-up phase of both the compiler and the run-time package in a manner that suggested it was using hexadecimal 4049 as a pointer to the top of available memory. I have also been using a serial printer driver that protects itself by storing the last available address below itself at hexadecimal 4049. I have experienced no difficulties with the use of this driver during compilation and execution of COBOL programs. If you have an application for this, I recommend careful testing to make sure that it works.

In case you haven't seen a reference to this before, most Model I DOS systems, including TRSDOS 2.3B, store a pointer at location hexadecimal 4049 to the last byte of available memory. Anything stored after the address contained in hexadecimal 4049 is "protected"; programs that follow this protocol, as RSCOBOL appears to, are careful not

#### A Sample RSCOBOL Program

The sample RSCOBOL program shown in listing 1 prompts the user to type in a selection key (a string of up to five characters); it then reads through a sequentially organized disk file and compares the first five characters of each record in that file against the string typed in at the keyboard. All records whose first 5 bytes match the specified string are listed on the screen. This process is repeated until the user types Q instead of a key value.

The IDENTIFICATION DIVISION of the program, lines 1 through 7, is treated as a comment by the compiler. It tells the program's name, its author, and the date it was written.

The ENVIRONMENT DIVISION contains a CONFIGURATION SEC-TION. This identifies the SOURCE COMPUTER, or the system on which the program was compiled, as RMC (Ryan-McFarland COBOL). The OB-JECT COMPUTER is the system on which the program will run; this is also RMC.

The INPUT-OUTPUT SECTION serves to establish connections between real disk file names and program identifiers for files. In this instance, line 17 logically connects the program file identifier INFILE with the TRSDOS file INFILE/DAT:1. A program variable could have been specified instead of the literal string INFILE/DAT:1, which would have allowed the file name to be specified at run-time rather than compile-time. The keyword INPUT specifies that this file is to be used for INPUT only.

The DATA DIVISION contains declarations for all program variables. Program variables in COBOL are referred to as "data items." The FILE SECTION contains a description of the disk records that will be read from the sequentially organized file INFILE. The WORKING-STORAGE SECTION contains declarations for all the program data items. IN-RECORD is the

name for the "group" data item comprising RECORD-KEY and REST-OF-RECORD. The clause PIC X(5) on RECORD-KEY declares that data item to be a 5-byte long string of alphanumeric characters. (PIC stands for PICTURE; X stands for a number or an alphabetical character.)

The data item USER-QUITS-FLAG in line 32 illustrates one of COBOL's powerful tools for enhancing program readability. This flag is a 3-byte character string (PIC XXX) that initially has the value "NO". USER-QUITS In line 33 is a "Level 88" item; it gives a name to a possible value of USER-QUITS-FLAG. In line 54 of the program, the statement PERFORM GET-KEY-AND-SEARCH-FILE UNTIL USER-QUITS serves to repeatedly perform the code paragraph labeled GET-KEY-AND-SEARCH-FILE until the USER-OUITS-FLAG assumes the value named by USER-QUITS, in this case the string "YES", MORE-DATA-REMAINS-FLAG is another example of the use of "Level 88" data items.

REQUEST-KEY-MSG and WAIT-MSG are data items containing prompts to be printed on the screen using the DISPLAY statement. The VALUE clause gives them initial

The PROCEDURE DIVISION of a COBOL program is where the work gets done. It is divided into "paragraphs," each labeled by a name starting in the second column. The first paragraph is named RECORD-SELEC-TION-AND-DISPLAY. It contains only two statements: one that has been explained already, and STOP RUN, which halts program execution and returns control to TRSDOS.

The next paragraph, labeled GET-KEY-AND-SEARCH-FILE, is the one PERFORMed repeatedly by the first paragraph. It clears the screen (ERASE) and puts the REQUEST-KEY-MSG on the second line of the screen.

It then ACCEPTs a user response from the keyboard, which goes into the data item called SELECT-KEY, POSITION 0 means leave the cursor where it is; PROMPT puts out a prompt of underscores the size of the data item SELECT-KEY; ECHO sends what is typed at the keyboard to the screen. The user is not allowed to type in more characters than will fit in the data item (one per underscore prompt character).

The IF statement in line 61 tests the value of SELECT-KEY typed by the user; if Q is typed, it puts the value "YES" in the USER-QUITS-FLAG. This causes termination of the program because the UNTIL USER-QUITS test in line 55 now evaluates as true.

If the user types anything other than Q, the ELSE part of the IF statement is executed starting at line 64. The file IN-FILE is opened for INPUT, and the paragraph SEARCH-FILE-AND-DISPLAY-RECORD is performed for each record in the file. When the file has been completely processed, it is closed in line 67, the flag MORE-DATA-REMAINS is reset to "YES" for the next time through the loop, and a messsage is displayed telling the user to hit the ENTER key to continue (lines 69 and 70).

The SEARCH-FILE-AND-DIS-PLAY-RECORD paragraph reads the next record from INFILE into the data item IN-RECORD. When the end of the file is reached, the word "NO" is put into the MORE-DATA-REMAINS-FLAG. This makes the test UNTIL NO-MORE-DATA-REMAINS in line 66 evaluate as true. If the end of the file is not reached, the RECORD-KEY field of the record read in from the file is compared to the SELECT-KEY typed in by the user, If they match, the entire record is displayed on the screen by the DISPLAY statement in line 77.

to use any memory past this point. This means that you can load any machine-language routines into high memory and set hexadecimal 4049 to point below them; the RSCOBOL system will not clobber your machine-language programs.

To give you a feeling for the

system, I will explain the procedure followed to create, compile, and run the COBOL program shown in listing 1. This is a short (by COBOL standards) program that searches a sequential disk file (very similar to a BASIC sequential file) for records whose key fields match the one typed

in at the keyboard. All matching records are displayed on the screen.

#### COBOL Editor

To create a COBOL source program, some type of text editor must be used. If you are accustomed to full-screen editors, you will be disap-

# The Newest, Easiest to Use Low-Cost Word Processor

Available for the Apple II<sup>1M</sup>

The word processor you choose should be powerful, yet simple to use. It should have the features of expensive word processors, and still be reasonably priced. And it should be able to run on any Apple II computer without requiring you to spend a few hundred dollars to buy additional hardware to make the program compatible with the computer.

The word processor that best meets these requirements is Hayden's new PIE Writer: Word Processing System. Here's what John Martellaro of Peelings Il magazine (the only independent magazine devoted solely to the evaluation of Apple software) has to say about an earlier version of PIE Writer, ". . one of the best Word Processors available for the money. It has an abundance of user-oriented features...is very fast and has a powerful editor ... has to be considered a best-buy word processor. For the money spent, it cannot be beat. The aesthetics of the input, the power of the editor and formatter and the flexibility are impressive."

# PROPORTIONAL AND INCREMENTAL SPACING ADDED

And now PIE Writer is even better. We've added the ability to do incremental spacing so that fractions of a space can be added between words when justifying text. This makes the distribution of the space required to fill out a justified line more uniform and less noticeable. In addition, with its optional proportional spacing formatter program, PIE Writer becomes the ONLY word processor that can print true proportionally spaced documents. Even WordStar<sup>TM</sup> at almost 3 times the price, can't do that. PIE Writer can also

save the final formatted text on a disk for printing at a later time.

#### PIE WRITER IS EASY TO USE

Because it is so simple to learn, PIE Writer can be used by anyone who can use a typewriter. The new, simplified manual and interactive tutorial will have even the inexperienced user up and running quickly. In just a matter of minutes you will learn how to enter and delete text, modify what has already been entered and format your information so that it is printed exactly the way you want it.

#### PIE WRITER IS VERSATILE

Versatility and compatibility are two important features of PIE Writer. While some word processors for the Apple II computer will only work with specific accessories, such as 80-column display boards, lowercase adapters and printers. PIE Writer is versatile enough to work with almost any combination of these. For example, the standard version is available for use on standard Apple II computers with a 40-column display. However, if you have any of the commonly available 80-column display boards, such as the Videx Video Term, Sup'r Term, Smarterm or Double Vision, we have a version of PIE Writer for you. Specify the version you want when ordering.

While the standard Apple computer does not permit the user to enter lower-case characters from the keyboard, PIE Writer does. Even more, PIE Writer supports a wide variety of lowercase adapters that are available, such as those that are available from Dan Paymar, Lazer Systems and Videx.

In addition, PIE Writer permits the user to display and print lines as long as 132 characters (for the 80-column version of PIE Writer). If you want to

see what your text will look like on the printed page before it gets there, you can preview the final page 24 lines at a time and check for page breaks and even get a final page count before the document is printed.

So why settle for less than the best. Get PIE Writer today. A comparison with the other leading word processor ought to convince you.

pointed with RSCOBOL's editor, Until there is a version of Scripsit or another full-screen editor that works with TRSDOS 2.3B, your only option is to use the line-oriented editor included with the RSCOBOL package. This editor, CEDIT, is written in assembly language. It is very similar to the original Model I EDTASM (Editor-Assembler) package, which in turn bears a close resemblance to the Level II BASIC editor, CEDIT does have a few enhancements, most noticeably the inclusion of a global "replace text" command. All CEDIT commands can be abbreviated to a single letter.

# If you are accustomed to full-screen editors, you will be disappointed with RSCOBOL's editor.

CEDIT loads all the text to be edited into memory and saves everything to disk at once. It is not a memory buffer editor, such as the one supplied with Radio Shack's FORTRAN package. Thus, you are restricted to editing files that will fit in memory all at one time. CEDIT saves COBOL source programs on disk in a plain ASCII format; blanks and line numbers are not compressed in any way.

If you look through the CEDIT portion of the RSCOBOL manual, do not be misled by the section titled "Source File Format" on page 3. It implies that each line of source code takes up its own 256-byte disk record. Fortunately, this is not true. Source code lines are packed together and terminated by carriage returns, as in most other TRS-80 editors. The entire file is terminated by a hexadecimal 1A byte.

When you are ready to use CEDIT to create a COBOL source program, you must decide which disks to put online. I have a disk that contains TRSDOS, CEDIT, and the RSCOBOL compiler. This disk goes into drive 0, and a blank disk in drive 1 holds the COBOL source code being edited. Decide in advance which disk

# A feast of computing ideas.

#### You'll love every byte.

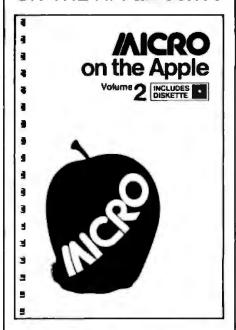

If you work with a 6502 or 6809 based system, you're probably hungry for the facts and ideas that will help you understand the inner workings of your computer. You want to go beyond canned software—use your computer for more than games—learn the advanced programming techniques that enable you to get the most out of your 6502/6809 system.

MICRO, The 6502/6809 Journal, gives you page after page, month after month, of solid information to sink your teeth into. MICRO is the premier how-to magazine for serious users of the Apple, PET/CBM, OSI, Atari, AIM, SYM, KIM, and all 6809 based systems including the TRS-80 Color Computer. It's a resource journal internationally respected by professionals in business, industry, and education.

SUBSCRIPTION RATES (U.S. dollars) Yearly subscription (ISSN 027-9002) saves 20% off the single-issue price. U.S., \$24 (SPECIAL OFFER: Save 30% off single-issue price: 2 years, \$42) Other countries, \$27 (via surface mail. Foreign air rates available on request.)

More than 40 new programs on diskette to help you get more from your Apple:

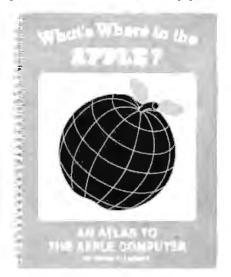

- Machine Language Aids
- I/O Enhancements
- Runtime Utilities
- · Graphics and Games
- Hardware and Reference Information

#### 31 choice articles

46 tested programs on diskette (13 sector DOS 3.2 format)

Volume 1 also available at \$24.95. Together MICRO on the Apple 1 & 2 provide more than 70 programs on diskette for less than \$1.00 each. No need to type in hundreds of lines of code.

with the most important book ever published for the Apple

The most comprehensive description of Apple II firmware and hardware ever published—all in one place.

What's Where in the Apple?

- Guides you—with a numerical Atlas and an alphabetical Gazetteer—to over 2,000 memory locations of PEEKs, POKEs and CALLs.
- Gives names and locations of various Monitor, DOS, Integer BASIC, and Applesoft routines—and tells you what they're used for.
- Helps BASIC users to speed up their programs.
- Enables assembly language programmers to simplify coding and interfacing.

All Apple users will find this book helpful in understanding their machine, and essential for mastering it!

P.O. Box 3297 Sania Ana, CA 92703 Phone: 714/731-4338 TWX: 910 595 1144 will hold your COBOL program; once in the editor, you cannot go back to TRSDOS to look at the disk directory without losing what is in memory.

Since the COBOL language reguires much similar information at the start of every program, I recommend that you create a "skeleton" or "template" file that contains this information. Then, when you create a new program, load this file and edit it as needed, rather than having to type in all the header information every time. Referring to listing 1, my skeleton file contains the IDEN-TIFICATION DIVISION, the EN-VIRONMENT DIVISION, and part of the DATA DIVISION seen in this listing. My DATA DIVISION skeleton includes a FILE SECTION with a couple of FDs and the WORKING-STORAGE section with some often-used identifiers. Experience will help you decide which things are frequently repeated,

Line numbers are provided by the editor during the text creation process. The INSERT command, abbreviated I, is used much like BASIC's AUTO command; it automatically enters a line number, then you type the line. During text insertion, if the line number of a new line is the same as that of an existing line, the entire text is automatically renumbered from the current line to prevent overwriting the existing line, This gives you the advantage of never running out of room during text insertion. However, the disadvantage is that automatic renumbering causes the line numbers of existing lines to change, INSERT does not notify you that this has happened. This makes it more difficult to find and correct a line that was the cause of a compilation error, since error messages use the old line numbers. However, the offending line's contents are printed along with the error message. Therefore, you can use the editor's FIND command to locate the line.

FIND lets you search a range of source text for any string of characters. Another "new" command is CHANGE, which lets you change any string of characters to a different

#### THE DISCOUNT SOFTWARE GROUP

6520 Selma Ave. Suite 309 · Los Angeles, Ca 90028 · (213) 837-5141 ini'i TELEX 499-0446 DISCSOFT LSA • USA TELEX 194-634 (Altn: 499-0446) TWX 910-321-3597 (Attn: 498-0446) string in as many places as you want. This is useful if you discover that a data item name is a COBOL reserved word, e.g., KEY. KEY can be changed to RECORD-KEY in all lines of a program with the CEDIT command:

#### C/KEY/RECORD-KEY/\*

The "\*" means change KEY to RECORD-KEY everywhere it occurs in the program. A number N, instead of "\*", means change it the next N times it occurs. The "X" command behaves like CHANGE, but it asks you if the change should be made every time it finds a match for the search string.

Another useful command is MEMORY, which tells how big your program is in bytes and how much free memory is left.

CEDIT's remaining commands have counterparts in the Level II BASIC and EDTASM editors. These include commands to list a range of lines to the screen or printer, delete a range of lines, replace a range of lines, renumber the lines, and move to the top or bottom of the program file. The EDIT command provides editing of a single line: character insertion, deletion, and replacement; extension of the line, etc., in a manner nearly identical to Level II BASIC's EDIT command.

Once a program is completely typed in, it is saved to disk with the WRITE command. A default file name extension of /CBL is automatically provided. For example, typing W SAMPLE:1 saved the sample program's source file on drive 1 with a file name of SAMPLE/CBL.

#### RSCOBOL Compiler

All the files in table 1 must be online before compilation begins. Several options are available at compile-time. I used the command:

#### RSCOBOL SAMPLE (P X L=1 O=1)

to compile the sample program. The options selected are printed at the top of each listing page. The P option means send a listing to the printer; an

xample is listing 1. The X option enerates a cross-reference of PRO-EDURE and DATA DIVISION names. This appears at the end of isting 1. The L=1 option sends a copy of the listing to a disk file on drive 1. O=1 means put the object ile on drive 1. If O=N had been elected, no object file would have been created.

RSCOBOL provides a COPY statement that allows COBOL source files to be included directly from disk in the compilation of a program. For example, a common record definition could be kept in a file called RECDEF, and the source program statement COPY RECDEF would open that file and compile its contents just as if it were part of the main source file beng compiled.

One problem with the implementation of COPY is that all COPY files must be online during compilation. If one of them is not, the compilation aborts with an error message. It would have been simple to have the compiler pause if the file were not found and ask the user to mount the disk containing the file instead of aborting the compilation. This would have extended the size of source files that could be compiled for users with only two disk drives.

A couple of other options are available that were not used in the sample compilation, The D option compiles all the "debug" lines. Simply stated, any program line starting with D is ignored during compilation unless the D option is specified, Therefore, you can write your program with as much extra code as you want to help during debugging, and then have it all eliminated from the final version of your program by simply compiling without the D option. Debug code is commonly used to DISPLAY the value of some data item while testing a program. However, there is no restriction on the type of source code line that can be flagged in this way.

If the compiler finds any errors in your program, they are clearly marked with a pointer to the offending word and an error message in English. More than 70 error messages are possible, and I have never had a problem figuring out what they meant. Each error message has a brief explanation in the manual.

The compiler does not stop until it reaches the end of the source file, no matter how many errors it finds. This helps you to find as many errors as possible with a single compilation. If you specify the E option when you compile, only error messages are sent to the listing files. This is useful when compiling for the first time; you are likely to have some errors and can save wear and tear on your printer by printing only the error lines.

The T option directs the listing output to the screen. You can specify as many listing destinations as you wish—it is possible to direct output to a disk file, the printer, and the screen all at once. The sample program in listing 1 creates a disk file and a printout at the same time.

As you can see from listing 1, the compiler provides a complete program listing. The date and time of compilation appear at the top of each page, along with the name of the source file and any options selected. The leftmost number in each line is a line number supplied by the compiler. The next column contains information needed when using the interactive debugger. Next is the editor line number, and then the source code line itself.

A summary of all program data items is provided in the order in which they were defined in the DATA DIVISION. Information provided for each data item includes from left to right:

- its address relative to the start of data storage, for use during debugging
- its size in bytes
- •a three-character type code used during debugging; ANS = alphanumeric, GRP = group, etc. (there are 12 in all)
- the "Order," which is the number of subscripts a data item requires
- the data item type name in English
- the data item name

This listing is followed by the size of the read-only portion of the program (presumably the code block) in bytes, the size of the read/write portion (the data area) in bytes, and the

isting 2: A summary of all data items from the program in listing 1.

ou can do it too, with SofTech Microsystems' unique software development and execution environment, the UCSD p-System<sup>TM</sup>.

Our UCSD p-System is the only genuinely machine-independent operating system for 8-bit and 16-bit microcomputers. And to over 50,000 end-users and scores of applications developers it is the one proven, reliable answer to software obsolescence.

For software development, it allows you to work in any combination of UCSD Pascal<sup>TM</sup>, FORTRAN-77, BASIC, and assembly language. It provides you support for dynamic memory management and multitasking, with a full arsenal of powerful enhancements, such as a versatile Screen Editor, Native Code Generators, a Print Spooler, TURTLEGRAPHICS and XenoFile<sup>TM</sup>, for easy access to CP/M® disks and files.

Users report that our UCSD p-System's friendly, fast and compact execution environment makes it their first choice in software. So whether it's for IBM, Apple, Tandy, Commodore, Texas Instruments, Philips or any other small computer, your best move is to our UCSD p-System. Nothing else touches it.

Our UCSD p-System is available for distribution licensing as well as single copy purchase. Visa and MasterCard orders are welcome, or you may write to us for more details.

9494 Black Mountain Road, San Diego. CA 92126. (714) 578-6105 TWIX: 910-335-1594 total size in bytes. The total size for the sample program and its data is hexadecimal 0264 (612 decimal) bytes, which is fairly compact for this COBOL program.

For the sample program, a crossreference table was requested. All PROCEDURE and DATA DIVISION names are listed in alphabetical order. For each entry, the line numbers in which it is declared and referenced are given. The line numbers in which a data item is declared are surrounded by slashes. Lines in which the value of a data item may be altered are marked with asterisks, e.g., \*0073\* for the variable IN-RECORD. In line 73. IN-RECORD is the destination of a record read from INFILE.

The COBOL compiler resides from

hexadecimal locations 5200 to AAFF in memory. This leaves hexadecimal 5500, or 21,760, bytes of memory free. The compiler is so large that it had to be split into overlays as shown in table 1. Different overlays are loaded from disk to compile different divisions of a COBOL program. It is not documented whether these overlays eat into the 21,760 bytes of free storage. A couple of internal error messages tell when the compiler's working storage has been exceeded. This could happen, for example, if a program has too many symbols to store in the compiler's symbol table.

If this should happen, the subroutine CALL can be used to alleviate the problem. A program can be split into a main program and subroutines, each separately compiled. At runtime, when the main program CALLs a subroutine, it is loaded dynamically from disk. This also provides a method for controlling memory usage at run-time. But it is not the only method. A single program can be broken into overlays. A program

Listing 3: A cross-reference of all PROCEDURE and DATA DIVISION names in alphabetical order. The line number where it is declared and referenced is also listed.

# Learn about the Z8000 from the people who are pioneering the Microworld.

Zilog's Z8000 Architecture Course takes you into the world of faster, smarter, smaller microprocessors without leaving your home. Our five-part correspondence course covers the details of

techniques of memory management, methods for interfacing memory and peripherals, plus use of the Z8000's powerful instruction set.

You study at your own pace. Each test is individually graded and

This course can make you an expert on Z8000 technology for only \$39. Enroll today by sending us the coupon? Allow six weeks for delivery of your first lesson.

# FMS-80 Organizes Your Organization

\*TM of Digital Research, Pacific Grove, CA

segmented in this manner is compiled in one piece, but the overlays are loaded into memory dynamically at run-time when they are entered via a GOTO or PERFORM statement. These two options, CALL and overlays, combine to provide the most dynamic memory-management system that I have seen in any TRS-80 language.

A word on compiler performance. With both the input of source text and the output of object code involving disk I/O (input/output), and the compiler itself requiring several disk overlay loads during the course of a single compilation, this compiler is no speed demon. The sample program, with the options shown, took 135 seconds to compile. This works out to about 35 lines per minute. This includes printing a listing and creating a listing file on disk, both including cross-reference lists. Choosing options of T and E (create an object file on disk and print any errors on the screen), sped things up to about 50 lines per minute. It then took 95 seconds to compile the sample program.

#### Testing a Program

The RSCOBOL system provides a simple run-time interactive debugger. This debugger allows you to test many aspects of a COBOL program without having to program in a lot of special debugging statements. Combined with the compiler's D option described earlier, RSCOBOL provides a decent debugging environment.

To make full use of the interactive debugger requires a current printed listing of the program under test. A printer is not a prerequisite for use of RSCOBOL, but I strongly recommend having one.

The command RUNCOBOL invokes the RSCOBOL run-time module. The debugger is invoked by specifying the D option. Once in the debugger, a COBOL program can be single-stepped a sentence or group of sentences at a time. This is achieved by typing S, optionally followed by N (where N is the number of sentences to execute). To execute all

the way up to a particular sentence, type A followed by the address in the DEBUG column preceding the sentence at which execution should

The final debugger command is D. It is used to DUMP the contents of different data items in a readable format. For the sample program, by typing D 54, 5, ANS, the current value of the data item RECORD-KEY is displayed on the screen. It is permissible

#### A printer is not a prerequisite for use of RSCOBOL, but ! strongly recommend having one.

to request the display of a data item. in other than the default format: a hexadecimal dump is available, for example.

Some important features that this debugger lacks include:

- 1. The capability to alter data item values.
- 2. A way of setting program breakpoints. The current system lets you specify that execution should proceed to a particular COBOL sentence; it is desirable to be able to specify a number of points in the code at which execution should halt, passing control to the debugging monitor.
- 3. A way to reference data symbolically rather than requiring the use of hexadecimal values representing actual data-storage locations.
- 4. A way to step through the statements of a COBOL sentence. In listing 1, there is only one value in the DEBUG column for the entire range of program lines from 61 to 71. This value represents the beginning of the COBOL sentence starting with "IF". You cannot step partially through this sentence; you must execute it in full.

If you are not using the debugger, the RSCBLD13/OBJ file need not be present during run-time.

#### Run-Time Environment

The RSCOBOL package includes a substantial run-time module that must be resident during the execution of any COBOL program. The runtime code resides from locations hexadecimal 5200 to BIFF, leaving about 20K bytes of user program space. This is respectable for a small machine.

There is a trade-off in using a standard run-time module rather than linking in only those pieces specifically required by each program. Use of a run-time module allows much faster program development; the linking phase otherwise required is usually very time-consuming. It involves a lengthy search of a large library module to find those pieces required by a particular program. A run-time module also cuts down on the size of user programs; without one, every user program must contain a lot of the code that is otherwise in the runtime module, resulting in much duplicated code on a disk holding several user programs.

The disadvantage is that, in most cases, not all of the run-time code is needed for a particular program. Therefore, some memory space is taken up unnecessarily. RSCOBOL compensates for this somewhat with its overlay and CALL statements for memory management.

Two options besides D (invoke interactive debugger) are available at run-time:

- 1. S-nn.,n: This option allows the setting of "switches" at run-time. A COBOL program can test for the value of these switches and make decisions accordingly. The eight switches each can assume the value 0 or 1.
- 2. T=hhhh: This sets the top memory address that will be used by RSCOBOL at run-time. It is used to protect user machinelanguage programs from the runtime system. As discussed previously, it appears that if your assembly-language program stores this value in location hexadecimal 4049 (for the Model I), the same effect is achieved.

Many English-language error

### CP/M DATA ENTRY

"RADAR"

RADAR is a high speed data entry system that will run on any CP/M system pro-viding a "3741" style key-to-disk environment. RADAR is ideal for replacing KEYPUNCH machines and older, slower key-to-disk systems like the 3741's and

#### Features:

16 Accumulators

Parameter Driven (No Programming)

"Virtual" File Access

Add or Delete Records

Record Retrieval By Number Or Content

**Full Editing Capability** 

Operator Prompts

Extremely Fast (Written In Assembly Language)

In addition to "heavy-duty" data entry, RADAR is also the ideal "front-end" for many applications programs, providing aquisition and retrieval of keyed data with a degree of reliability simply not possible with any other technique. RADAR can cut programming time by more than 30%, simply because there is no longer any need to write the "input" portion of a program, just let RADAR handle it!

Write or call for free brochure. The RADAR manual is also available separately for \$25.00.

P.O. Box 3373A Birmingham, AL 35255 Phone: 205-933-1659 messages can appear at run-time. They are carefully documented in the RSCOBOL manual.

My overall impression of run-time performance is favorable. Every program I have written which reads from the disk, computes something, and writes the results to the printer has managed to keep the printer moving at full speed (60 characters per second bidirectional). Interpreted BASIC programs I have written, which perform similar formatted I/O with the PRINT USING statement, pause noticeably between the output of formatted data items. By comparison, RSCOBOL is quite snappy and moves right along.

#### Language Implementations

RSCOBOL is based on the ANSI X3.23-1974 COBOL Standard. The ANSI Standard defines "levels" of implementation for different aspects of the language. Table 3 lists the levels of implementation provided by RSCOBOL. The more advanced the implementation, the higher the level number. The Federal Information Processing Standard (FIPS) lists 2 as a relatively "high" level of implementation for most language components. RSCOBOL's implementation does quite respectably.

Table 3 is somewhat misleading in that there are exceptions to the levels of implementation stated, i.e., certain features defined by ANSI as part of a level are not implemented. A complete list of these exceptions is in the

back of the RSCOBOL manual. Notable exceptions include:

- Multiple results are not supported in arithmetic statements. For example, you cannot state ADD A TO B C; you must state ADD A TO B and ADD A TO C.
- REMAINDER is not supported in the DIVIDE statement.
- INSPECT data items are restricted to a single character.
- •Compound TALLYING and REPLACING clauses in the INSPECT statement are not supported.
- •Exponentiation to a noninteger power is not supported.
- Abbreviated combined relation conditions are not supported. You cannot say IF A EQUALS 1 OR 2; you must say IF A EQUALS 1 OR A EQUALS 2.
- •The STRING and UNSTRING statements are not supported.

Some extensions to the stated levels of implementation are available, mostly nonstandard. One that struck me as quite interesting was the inclusion of several statements having to do with the locking and unlocking of disk records. These statements allow simultaneous access to a disk file by multiple users in a controlled fashion.

It is worth mentioning that the rather powerful MOVE CORRE-SPONDING statement is implemented. This lets you move all like-named fields from one record to another with a single statement. MOVE CORRESPONDING is frequently left out of small-machine in plementations of COBOL. Also in plemented are ADD CORRESPONI ING and SUBTRACT CORRISPONDING.

The ACCEPT and DISPLAY statements provide good capabilities from interacting with the display as keyboard. In listing 1, the ACCEP statement in line 60 puts out a field underscore characters the size of the data item SELECT-KEY, and allow only that many characters to be input. DISPLAY is a programmatical simple way of printing a data item contents on the screen.

Assembly-language programs c be called from RSCOBOL. They a dynamically loaded from disk a must be in standard TRSDOS lo format, An arbitrary number parameters can be passed to assembly-language program via t USING clause of the CALL state ment. Parameters are passed reference, i.e., the address of the da item itself is passed. This is a ve flexible system. Loading assembl language programs from disk at ru time gives the same flexibility f managing memory used by assembly language programs as for that us by COBOL subroutines.

#### File I/O

COBOL probably has the mocomplete set of commercial fil handling statements of any languag It is a substantial challenge to implement them for a 48K-byte RAM, du floppy-disk Model I. RSCOBOL privides three major COBOL file type sequential, relative, and indexed signential.

Sequential files can have fixed-variable-length records. Variabl length records contain a byte at the beginning of each record telling the length of that record. Lengths value from 2 to 255 bytes. Fixed-leng records do not contain any bytes telling the length. Sequential files, containing records of either type, must accessed in order, that is, one reconsider the other in the order they we stored.

Relative or random files conta fixed-length records. Any particul

### **PFAS**

#### The portable ISAM for the UCSD p-System™. Pascal MT + ™, and the HP-1000 Pascal

PFAS is the professional, easy to use program development tool with advanced features such as:

- \* Variable length records
- \* Alternate and partial key access
- \* Unlimited number of records in a file
- \* A B+ tree Index.

PFAS is a set of modules which link to your PASCAL program making powerful ISAM functions part of Pascal.

Programs using PFAS are not limited to a single machine or operating system. Since PFAS is written in Pascal it is truly machine independent. Irom Apple to Zenith, from HP-125 to HP 1000, Only PFAS is this portable.

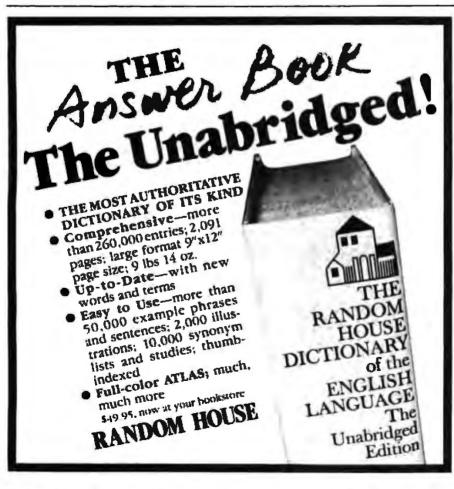

Now available for the p System is PHOS-FORM, our formatted screen input system. PHOSFORM allows you to quickly create and customire fill-in-the-form type input for your programs. PHOS-FORM configures itself to run on any ter minal making your software portable

When you use PFAS and PHOSFORM to input, organize, and maintain your data, your time can be more effectively spent dealing with the creative lacets of your software

- \* PFAS with Manual . . . . . . . . . . . . . . . from \$200 \* PHOSFORM with Manual (Introductory Price) . . . . \$ 95

### C.J. Wigglesworth Goftware / Fryphon Systems P.O. Box 755, Cardiff-by-the-Sea, CA 92007 (714) 436-1455

- \* Pascal MT . Is a trademark of MT MicroSYSTEMS.

record can be accessed "at random" by specifying its record number. The first record is number 1, the second number 2, etc. The maximum length of a relative record is 253 bytes.

Indexed sequential access method (ISAM) files are the most powerful ones provided by RSCOBOL, Records in an ISAM file are fixedlength, but can be up to 4096 bytes long. When creating an ISAM file, one or more "keys" must be specified. A key is simply a field of the record that is used later as a search argument over the file.

For example, an employee record may contain a Social Security number field. If this field is specified as a key when the file is created, you can later retrieve a particular employee's record by specifying the Social Security number. Such a method is usually easier to program than relative files, which require that you provide a record's number in order to directly retrieve it.

When an ISAM file is created. records are stored in sorted order on their "primary keys." The primary key must be guaranteed unique; the Social Security number is a good example of such a field. Secondary keys can also be specified for a record. A record can be retrieved by specifying the value of any secondary-key field. Secondary keys can have duplicates, that is, two or more records can have the same value in a field designated as a secondary key.

The sample program in listing 1 uses a sequential-type file, not ISAM. It does a sequential search of the file when looking for a record whose key field matches the value typed in at the keyboard. If an ISAM file had been used, the record desired could have been located directly by its key value,

In summary, the records of an ISAM file can be sequentially retrieved in the sorted order of any key field, and directly retrieved by specifying the value of a particular key field. This powerful access method reduces the amount of user programming required for many data-storage applications.

ISAM files do pay a space penalty for this generality in retrieving

### Robotics • Fiber Optics • Lasers • Pollution Control • Pollution Monitoring •

Up-to-date, inside-track reports now available from the vast resources of McGraw-Hill Research and Standard & Poor's

From with confidence to these INDUS-TRY PROFILES to keep up with technological trends, marketing opportunities, and your competitors' activities in today's key industries.

Each Profile gives you current and immediately useful facts on a major growth industry. Each condenses a wealth of hard data and essential information for either quick access or concentrated study.

INDUSTRY PROFILES are now available for five key industries; industrial robots, fiber optics, industrial lasers, pollution control equipment, and pollution monitoring equipment

Developed from a unique data base comprising nearly a quarter of a million documents, they reflect the combined, imparabled resources of McGraw-Hill Research and Standard & Poor's.

In these Profiles you'll find the most relevant and up-to-date industry information, distilled in a clear and accessible format from government documents, private reports, and the world's business press.

No other single source offers you this unique opportunity—at such an affordable price—to obtain concentrated, reliable information on industries vital to your company's growth and success.

Now available — INDUSTRY PROFILES in these five rapidly developing areas:

#### **Industrial Robots**

Explores the rapid technological and economic expansion of this graving industry sector; describes markets, market leaders, and major foreign producers; highlights current technology and research programs; summarizes political and environmental pressures; and more.

#### **Fiber Optics**

Examines an inclustry which is just reaching its turning point — estimated world demand for all fiber optics applications will grow to around \$40 billion by the year 2000. Details the reasons for the predicted explosive growth; identifies fiber optics production by component type as well as component consumption by application:

#### **Industrial Lasers**

Reviews the industrial, scientific, and defense applications of this growing business; focuses on nineteen user industries; discusses competing, new and emerging technologies; offers unique marketing projections; gives details on more than 170 producing companies; and more.

#### Pollution Control Equipment

Assembles extensive data on air water, noise, marine, and other pollution controls; examines future standards and comments on the \$22 billion to be spent in compliance; outlines foreign sales and sales by SIC; reviews legislation; identifies nearly 500 companies in the product area; and more.

#### Pollution Monitoring Equipment

Spotlights trends, technology, uses, and sales of monitoring devices; identifies major companies and their products; details domestic and foreign markets; shows current R&D expenditures; traces the role of the EPA and other regulatory agencies; and more.

#### Join the forwardlooking executives who rely on INDUSTRY PROFILES for

- data to support decisions on new products, expanded markets, mergers, acquisitions
- forecasting a finger on the pulse of industry development and activities
- succinct overviews of specific industries — their economic and technological patterns
- sales backup data, contacts, and details on competitors

### Each INDUSTRY PROFILE covers these vital subjects...

- Background including legal, sociological, and historical data
- Economics applications, users, sales, forecasts
- Competition who's producing what, who's making the sales
- Technology state-of-the-art and research programs
- Political and Foreign Implications

   perspectives, trends, major foreign producers

Each Profile is assembled in a handsome and durable portfolio. 'In receive your copies, at \$250 each, send in this coupon or write to:

records. An index structure is stored in the file for each field specified as a key. The manual states that the use of secondary (ALTERNATE) keys causes a geometric growth in the time required to create a file. However, the time required to access a record by its key is relatively uniform throughout the file.

The RSCOBOL manual gives the following formula for estimating the number of 256-byte sectors required for an ISAM file with the specified parameters:

NRECS=INT  $((S+33)/32) \times R/8$  $+(R\times2)/INT(252/(Kn+8))$ For each key If duplicates  $+(R\times D)/8$ are allowed

where R=maximum number of records desired

=size of records in bytes

Kn =size of key n in bytes

D = number of keys that allow duplicates

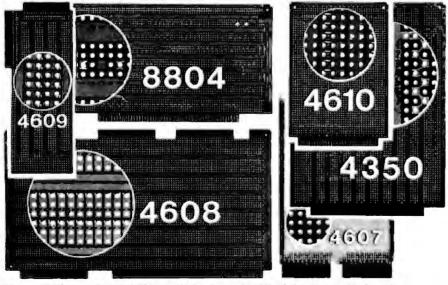

I created an ISAM file containing one hundred 61-byte records, each containing a 5-byte primary key and no secondary keys. The input records used to create the file were read from a sequential file on disk. The ISAM file took 3 minutes and 40 seconds to create (2.2 seconds per record), and it used 37 sectors on the disk (8 grans). Since the formula predicts 35.5 sectors, it appears to be fairly accurate. A record file created by Disk BASIC would take 25 sectors (four records per sector) to hold this same amount of data. Therefore, the indexes do produce some overhead. Of course, you could not access the Disk BASIC records by key value, and this is the function you are buying with this extra disk space.

Performance wise, the disks kept spinning the whole time the ISAM file was being generated. An interpreted BASIC program creating a record file usually leaves the disks idling at intervals while it is performing computations. Two factors could further speed up the file creation process. First, TRSDOS 2.3B steps my MPI disk-drive heads at a slow 40 milliseconds (ms) per track; they are capable of 5 ms per track, Second, 1 had the file of input records used to create the ISAM file on the same drive as the ISAM file itself. By placing these two files on separate drives, less disk-head movement would occur and the files would be accessed faster

#### Documentation

The manual accompanying RSCOBOL is a substantial one. It comes in a 3-inch-thick loose-leaf binder containing 368 offset-printed pages in a readable dot-matrix font, This is definitely not a beginner's guide: a good COBOL textbook is a necessity if you have not used the language much. If you are already familiar with COBOL, however, you will find complete information about every aspect of RSCOBOL, written in the style of a reference manual.

# **BYTE'S Best Gellar List**

Ciarcia's Circuit Cellar. Volumes I, II, & III by Steve Ciarcia

Collections of Steve Ciarcia's perennially popular columns from BYTE Magazine, these three volumes are sure to please home computer users and electronics hobbyists. Volume I includes power conversions, programming EPROMs, remote terminal interfacing, touchinput video display, and more. Volume II. focusing on projects which interface the personal computer with the home, features useful applications such as a computer-controlled home security system, computerized appliances, input-output expansion for the TRS-80, and even a computer-

controlled wood stove. Volume III offers low-cost construction projects such as an ultrasonic rangefinder, handheld remote computer control, two speech synthesizers, and a remote-control motorized platform, to name just a few.

#### **Build Your Own Z80 Computer**

This complete guide to building a working computer offers engineers, students, and hobbyists an exciting alternative to buying a computer. With clear instructions, Steve Ciarcia fully explains how to build a basic single-board micro-computer based on the Zilog Z80 microprocessor. The finished product features a 1 K-byte operating system, serial and parallel ports, hexadecimal display, audio cassette mass storage, and easy expansion to include a video terminal.

### WHEN WAS THE LAST TIME YOU CONDUCTED A SYMPHONY ORCHESTRA?

We can't wheel the Berlin Philharmonic into your living room, but we can supply you with an ALF Music Card — and that's almost as good.

Play what you choose — whether it be the umpteenth variation of "Heart and Soul" or the ultimate interpretation of "Toccata and Fugue", the music is totally yours.

Can't play an instrument? No matter — all you need is your. Apple II, your stered, and an ALF Music Card.

# Choice

GNT Makes a Tape Punch Station and a Tape Reader/Punch Combination.

Both are small, quiet, and economical. One of them will fit your needs exactly.

#### The 4601 Combo

- Punching speed: 75 Cps
   Reading speed: up to 150 Cps
- · RS-232-C serial interface
- Utilizes all types of Mylar\* and paper tape
- Reliability: MTBF 100 million characters

- Punching speed: 50 or
- 75 Cps
- RS-232-C serial interface
- Utilizes all types of Mylar\* and paper tape
- Reliability: MTBF 100 million characters

### **EGNT AUTOMATIC INC.**

1560 Trapelo Road, Waltham, MA 02154 (617) 890-3305 Telex: 923318

The first section describes the use of the system, including discussions on how to use the compiler, the runtime module, and the interactive debugger. Compile-time and run-time error messages are listed and explained. An appendix gives sample program listings, including one that demonstrates many error messages. The source code for these sample programs is included on the disk that comes with the system.

The second section of the manual describes CEDIT. Several examples are given for each command. You should have no problems using the editor based on these instructions.

The third section is by far the largest at 297 pages. It gives a thorough definition of the RSCOBOL language, with detailed semantics for every language feature. The organization of the parts discussing file I/O is nicely divided into sections on sequential, relative, and indexed files.

There is a good table of contents, but no index is provided. Every error message the system can produce is documented with a sentence or two of descriptive text. There is an appendix listing all the COBOL reserved words. A thorough 24-page glossary describes special terms. The last appendix gives a skeleton description of the complete language syntax.

#### Conclusions

Radio Shack has provided a very complete, professionally done COBOL package. The memory-management options do almost everything possible to compensate for the inherent limits of the Model I and III machines-a small main memory of 48K bytes and limited floppy-disk storage. The most powerful features of this system, especially the multikeyed ISAM files, are limited by the floppy-disk system for anything but the smallest applications. Use the formula given earlier for computing disk-space requirements and make sure your application will fit before you invest in this software, However, if you just want to learn how to program in COBOL and you already have the hardware, this is an excellent package,

# Infinity: First in a series of t-shirts by Scott Kim

#### Inversions

An "inversion" is a word that has been written so that it reads symmetrically.

For instance, words that are the same upside down and right side up are inversions. A few words exist in the English language that do this naturally, such as "SWIMS" and "NOON." But alas, the great majority of words, when turned upside down, don't do anything interesting at all.

Fortunately for lovers of inversions, letters are quite flexible. Look around you and you will see the letter "a" written in hundreds of different ways. And all of them we have learned to read as the same letter

By bending and stretching the shapes of letters, we can turn ordinary asymmetrical words into symmetrical inversions. Not all words will work, but when they do, the results are inevitably fascinating.

Scott Kim's new book Inversions: a Catalog of Calligraphic Cartwheels, published by Byte Books, is a collection of more than 60 inversions, exploring a wide range of ideas and lettering styles. In the accompanying text, Scott explains how inversions are created, so that you may try your hand at them.

"Scott Kim's Inversions...
is one of the most astonishing and
delightful books ever printed...
Over the years Kim has developed
the magical ability to take just
about any word or short phrase
and letter it in such a way that it
exhibits some kind of striking
geometrical symmetry."

- Martin Gardner, Scientific American

#### Infinity

In this design, Scott Kim mixes idea and image, art and technology, in a swirling evocation of infinity. This intricate design was created with the aid of a computer program, which took a basic hand-drawn design.

repeated it symmetrically,

then bent it into a continuously expanding spiral.

As you look at the design, you'll discover that it can be read in two different ways. Notice that the letters "fi" when turned upside down become the "y" at the end of "infinity." And so the spiral can be read as either "infinity" going in or "infinity" coming out! Which do you see?

Infinity is the first in a series of wearable wordplays from the book *Inversions: a Catalog of Callig-raphic Cartwheels* by Scott Kim. The book is available through your local bookstore, or by calling Byte Books toll-free at 800-258-5420.

Give the Infinity shirt as a gift, wear it while doing double back somersaults, take one on your next space flight. The possibilities are infinite.

### **Hardware Review**

### John Bell Engineering's Apple II Parallel Interface Board

Ned W. Rhodes 2001 North Kenilworth Arlington, VA 22205

One reason I bought an Apple II was the potential for expansion on its motherboard. I'd planned to add a parallel I/O (input/output) port, a real-time clock, and a couple of other items I was going to design and build. After working with the board for two years, though, I concluded that buying one that already had these features would put me ahead of the game.

Fortunately, I discovered that John Bell Engineering produces an Apple II parallel interface board-actually a multifunction module. It contains two 6522 Versatile Interface Adapters (VIAs) and can function as a parallel interface, clock, or counter. To explain the capabilities of the card, I need only elaborate on the capabilities of the 6522 chip.

#### About the Author

Ned Rhodes earned a BEE from the University of Minnesota and a master's in computer science from George Washington University. He presently develops minicomputer-based distributed processing systems for the MELPAR division of E-Systems Inc. in Falls Church, Virginia.

#### The 6522 VIA

The 6522 is a 40-pin support chip compatible with the 6502 microprocessor family. The chip is designed for connection to the data and address bus of a 6502 microprocessor, and it provides two bidirectional, 8-bit I/O ports (where the direction of each bit is programmable). In addi-

tion to the parallel ports, each 6522 has two 16-bit, fully programmable clocks that can be used as counters or interval timers. The chip also includes a shift register for use with one of the timers to clock serial data into or out of the 6522. Each 6522 fully supports the 6502 interrupt structure, finally allowing you to constructively use

#### At a Glance

Apple II Parallel Interface

Board may be used for parallel I/O, timing, or serial-to-parallel/parallel-to-serial conver-

#### Manufacturer

John Bell Engineering **POB 338** Redwood City, CA 94064 (415) 367-1137

#### Dimensions

3 inches by 5 (7.5 by 12,5 cm); plugs into any Apple slot

#### Price

Assembled, \$69.95; kit, \$59.95; board only, \$22.95

Board contains two 6522 Versatile Interface Adapters with a total of four 8-bit, bidirectional I/O data ports; eight I/O controi lines; four independent, 16-bit timers; and two 8-bit, serial-to-parallel/parallel-toserial shift registers. User can choose the IRO or NMI interrupt lines

#### Software Needed

All user-written—no software provided

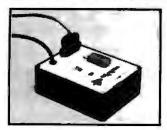

#### Documentation

A 16-page booklet containing a circuit board description and a 6522 data sheet

Assembly-language programmers and others with some hardware experience

### **Model 953A EPROM PROGRAMMER**

- Programs 2508, 2768, 2516, 2716, 2532 and 2732 live volt EPROMS.
- Complete no personality modules to buy.
- Intelligent microprocessor based, programs and verifies any or all bytes
- AS-232 serial interface use with computer or terminal,
- Verify erasure command varifles that EPROM is crased
- Extended diagnostics error output distinguishes between a had EPROM and one which needs erasing.
- May be used for extremely reliable data or program storage.
- All power on programming socket under processor control LEO warning light indicates when power is applied.
- Complete with Textool zero insertion force socket.

6479

- High performance/cost ratio.
- Standard D9-25 I/O connector.

MINIMUM DRDER \$100.00

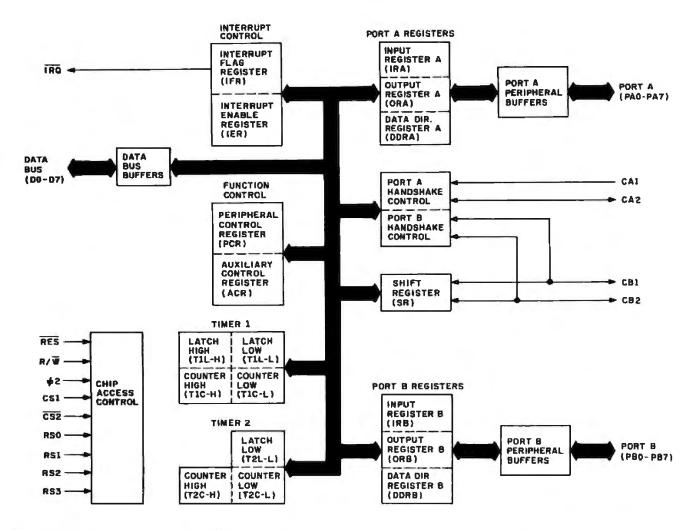

Figure 1: Block diagram of the internal configuration of the 6522 VIA (Versatile Interface Adapter) integrated circuit,

#### the Apple interrupts.

All communication with the 6522 occurs through 16 internal registers. Two of the 16, IRB/ORB and IRA/ORA, are used as I/O registers for the two 8-bit parallel ports. Two others, DDRB and DDRA, are datadirection registers that define the direction of each bit (either input or output) of the parallel ports. Four registers are set aside to control the two programmable counter/timers, and one I/O register controls the serial-shift register. Two registers select the operating mode of the timers and shift register; they also determine whether the chip will recognize positive- or negative-going control pulses.

The 6522 has a dedicated interrupt flags register that allows the chip to generate interrupts upon detection of (1) a positive- or negative-going edge on any of the four control lines, (2) a timeout (overflow) condition on either of the timers, or (3) the completion of a shift-register shift cycle. One register selectively enables and disables interrupt generation, while the last register is reserved for special forms of I/O through port A. Figure 1 is a block diagram of the 6522 chip's internal layout.

#### 6522 on the Apple

Due to a design limitation in the Apple II, the 6522 can't work properly if it's merely attached to the bus; the 6522 requires a phase 2 clock pulse that isn't available on the Apple. The Apple 6502 processor generates the phase 2 clock signal, but that pin is unavailable at the expansion slot connectors.

Therefore, the I/O board must gen-

erate its own phase 2 clock signal. The phase 2 clock pulse is simulated by delaying the phase 0 clock signal by 80 nanoseconds. I must point out that simply delaying phase 0 may not match the duty cycle specification of the phase 2 clock, but that doesn't seem to matter. The 6522s accept the simulated phase 2 clock signal and work just fine.

#### The Circuit Board

The board may be purchased in three different forms. For those of you with no hardware experience, it's available as a fully assembled and tested card, It may also be bought as a complete kit or as a bare board for which you supply the parts. I chose the bare board, then ordered the sockets and 6522 chips from a mail-order supplier.

The board is very simple to build.

		****************	and and a standard of the

All you do is mount two 40-pin sockets, four 16-pin sockets, one 14-pin socket, and two bypass capacitors. Then plug in the chips and you're ready to go. The documentation suggests that you use "standard assembly and soldering techniques." I guess that means you shouldn't lift the solder donuts by applying excessive heat and that solder bridges between pins are taboo. I managed to avoid both perils.

Connections are made through the four 16-pin DIP (dual in-line package)

sockets; each socket handles eight bits. If interrupts are used, two jumper wires must be installed to enable them. One of the 6522s can be attached to the IRQ (interruptrequest) line, while the other can be attached to the NMI (nonmaskable interrupt) line. Note that the interrupt lines cannot be shared—you can have only one 6522 attached to an inter-

Documentation accompanying the board is sparse, and the unadventurous user may get lost. The board comes with a two-page circu diagram and register identification list, a two-page circuit description and a two-page list of all possib board addresses (whose availabili depends upon which slot is used the Apple). A ten-page 6522 da sheet is also provided.

If you can read the data sheet, yo can use the 6522. If you find the da sheet difficult to understand, chance are this product isn't for you. T. manufacturer has provided no so ware examples because of "ti numerous uses of the board." believe that limits the board usefulness. Hold on, though; I've pr vided two software routines demonstrate the capabilities of t parallel interface board and t 6522s.

#### Software

I was unable to write software th would test all of the 6522 function so I chose two of the more comme applications: parallel I/O and clock

Parallel Printer Routine. The fir software example, in listing 1, is parallel output routine for a print such as the Epson MX-80. Two bas sections comprise the routine. In the first section, the output routine "hooked" through DOS, so that as character output to the screen w also appear on the printer. T horizontal-tab counter and tl screen-echo flag are initialized at the time. The 6522 is then set up for ou put, and a Control X is sent to t printer, clearing its internal buffer. the routine's second section characters are output, one at a tim to the printer.

The 6522 initialization is uniqu First, you enable port A for output placing a hexadecimal FF in the da direction register (DDRA) for port Then set up the data-output stro and the data-ready flag, which are I handshaking signals required I parallel communications. When 1 printer is ready to receive data, it dicates this with a pulse. With I MX-80, a negative-going pulse dicates ready, so you tie it to the C line (one of the control lines for p A). The other signal, the data stro-

Tune up your LA36 The DS120 Terminal Controller makes your LA36

### perform like a DECwriter® III.

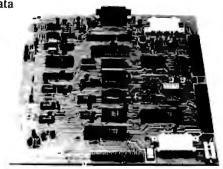

The Datasouth DS120 gives your DECwriter\* II the high speed printing and versatile performance features of the DECwriter III at only a fraction of the cost. The DS120 is a plug compatible replacement for your LA36 logic board which can be installed in minutes. Standard features

- 165 cps bidirectional printing
- Horizontal & Vertical Tabs
- Page Length Selection
- 110-4800 baud operation
- 1000 character print buffer
- X-on, X-off protocol
- Self Test

- RS232 interface
- 20 mA Current Loop interface
- Top of Form
- Adjustable Margins
- Double wide characters
- Parity selection
- Optional APL character set

Over 5,000 DS120 units are now being used by customers ranging from the Fortune 500 to personal computing enthusiasts. In numerous installations, entire networks of terminals have been upgraded to take advan-

tage of today's higher speed data communications services. LSI microprocessor electronics and strict quality control ensure dependable performance for years to come. When service is required, we will respond promptly and effectively. Best of all, we can deliver immediately through our nationwide network of distributors. Just give us a call for all the details.

A REFURBISHED DAISY WHEEL TERMINAL FOR PERSONAL COMPUTER USERS AND SMALL BUSINESSES.

### Now you can have <u>letter-quality printing</u> and professional features for just \$1,495\*

AJ daisy wheel printer terminals are renowned for exceptional performance, high reliability, and applications versatility. Now you can have all this for only \$1,495° in our special limited offer.

A HATE

- 30 cps letter-quality printing
- Changeable type faces
- Full ASCII keyboard with numeric pad
- High resolution X-Y plotting
- Complete electronic forms control
- 128-character buffer
- Asynchronous RS-232 interface
- Printwheel, ribbon cartridge, and cable included
- 30-day parts/labor warranty

\*Price excludes options and is subject to change without notice. Model shown includes certain options. Offer available only in the continuous U.S.

And you can choose from a list of options including forms tractor, pin-feed platen, paper trays, side shelves, extra printwheels, APL keyboard and 2K buffer.

Call your nearest AJ regional office for details; San Jose, CA (408) 946-2900; Rosemont, IL (312) 671-7155; Hackensack, NJ (201) 488-2525. Or check the phone book for the number of your local AJ sales/service office.

### TRISWATCH

#### Keeps your TRS-80 Mod II up with the times.

The Triswatch, formally known as the CCB-II, is a clock, calendar, and audio alarm rolled into one!

- For TRSDOS users, the CCB-II eliminates the hassle of setting the time and date when you reset your Mod II.
- The P&T CP/M® 2 system date and time are synchronized to the CCB-II each time the system is reset.
- The CCB-II is directly accessible from any language that allows direct port input and output.
- A pacemaker battery is included, which provides over 8 years of continuous timekeeping.

Keep up with the times and order the CCB-II for \$175 plus shipping.

TRS-80 is a tradement of Tandy Corp. CP/M is a registered trademark of Digital Research Inc.

### SOFTWARE DEVELOPMENT TOOLS FOR INDUSTRY

#### CP/M CROSS-ASSEMBLERS

Fast, comprehensive cross-assemblers to run under CP/M.\* Extensive pseudoops include full listing control, nested 
conditionals, mnemonic synonyms, 
and inclusion of external source files. 
Generate object file, assembly listing, 
and symbol table from source code for 
nine popular microprocessor families.

Assemblers... \$200.00 each Manual only... \$ 25.00

#### **8048 DEVELOPMENT PACKAGE**

Now you can use the 8048 family of single-chip microcomputers without buying expensive equipment. Develop 8048 software with the XASM48 cross-assembler. Then plug our EPR-48 board into your S-100 system to program the 8748 EPROM version.

8048 Development Package ... \$574.00 EPR-48 alone ..... \$449.00

#### **EPROM SIMULATOR BOARD**

Debug dedicated systems quickly. Our PSB-100 PROM Emulator is an S-100 board with up to 8K of RAM. Cable with 24-pin plug replaces 2708 or 2716 EPROM(s) in your target system for instant program testing

PSB-100 EPROM Simulator ... \$445.00 w/2K RAM

#### PRODUCTS FOR YOUR RADIO SHACK

MUNICATIONS VIA YOUR MODEM!

Now you can use your printer with your modem! Your computer can be an intelligent printing terminal. Talk to timeshare services or to other personal computers; print simultaneously through a second printer port; and re-display lext stored in memory. Download text to Basic programs; dump to a cassette tape, or printer, or both. Microtext can be used with any printer or no printer at all. It features user-configurable duplex/parity for special applications, and can send any ASCII character. You'll find many uses for this general purpose module! Available in ROMPACK, ready-to-use, for \$59.95.

#### **SOFTWARE DEVELOPMENT SYSTEM**

The Micro Works Software Development System (SOS80C) is a complete 6809 editor, assembler and monitor package contained in one Color Computer program pack! Vastly superior to RAM-based assemblers/editors, the SOS80C is non-volatile, meaning that if your application program bombs, it can't destroy your editor/assembler. Plus it leaves almost all of 16K or 32K RAM free for your program. Since all three programs, editor, assembler and monitor are co-resident, we eliminate tedious program toading when going back and forth from editing to assembly and debugging!

The powerful screen-oriented Editor leatures finds, changes, moves, copys and much more. All keys have convenient auto repeat (typamatic), and since no line numbers are required, the full width of the screen may be used to generate well commented code.

The Assembler features all of the following: complete 6809 instruction set, complete 6800 set supported for cross-assembly; conditional assembly; local labels, assembly to cassette tape or to memory; listing to screen or printer; and mnemonic error codes instead of numbers.

The versatile ABUG monitor is a compact version of CBUG, tailored for debugging programs generated by the Assembler and Editor. It leatures examine/change of memory or registers, cassette load and save, breakpoints and more. SDS90C Price: \$89.95

#### |||| ||| ||| ||| || GAMES

Star Blaster — Blast your way through an asteroid field in this action-packed Hi-Res graphics game! Available in ROMPACK; requires 16K. #### I(nterchange)

((nterchange) is a general purpose file maintenance program for use with the CP/MIM operating system. Since it is a single program written in optimized Z-8014 code, it is much faster and easier to use than other file maintenance programs. Features include: DIR as usual plus listing all files excluding those with a specified character(s), ERA as usual plus exclusive arases. Also, a "Q" switch can be used to query each crase, a "W" allows crases of R/O files without query (normally you are queried), and an "A" switch it system files are to be included, UST permits listings and uses TAB, WIDTH, LINES and WRAP for control. COPY as usual plus exclusive copies and supports the "O", "W" and "R" switches plus an "E" switch for quary on existing files. STAT with ambiguous, unambiguous and exclusive listings and produces an alphabetized listing with file length, total directory entries and space used and unused. START-END allows for copying contiguous data files, and RENAME as usual plus ambiguous renames. Other commands include: QT. DATE, TIME and SETIT (for the QT slock board) plus CLEAR, RESET, HELP and TYPE. Dish copies can even be continued after a disk full condition by simply insurting a new disk. All of this in one program without ever having to leave I (oterchange) and wait until you see the speed improvement ,

The price for I{nterchange} is \$59.95 and the manual is available for \$10.00 (credited towards purchase), I(nterchannel is recommended for 32K or targer systems using CP/M14 2.0 or later. It will not run on an BOHO CPU and only User 0 is supported.

All pragrams are available on 8" SD or North Star 54" disk Microstat is available for North Star Basic, Microsoft's Basic-80 (Rel. 5.8 or later) or compiler Systems CBasic2. Please specify when arderina.

clocks data into the printer's internal buffer. Again, the MX-80 requires a negative-going pulse for the data strobe; use control pin CA2 for this function.

The 6522 allows you to choose a negative- or positive-going pulse for either of two signals; inform the 6522 of the desired polarity by loading the Peripheral Control Register (PCR). With the MX-80, hexadecimal 0A is the proper code. This bit pattern is determined by consulting the coded values on the data sheet. We enable the printer by sending it a Control Q (hexadecimal 11) and then a Control X to clear the internal buffer.

The actual output routine is quite simple. First, check the horizontal character position and compare it with the current character position in the output line. If they differ, output spaces until reaching the proper character position. To print characters, check bit 2 in the Interrupt Flag Register (IFR) to see if the printer has sent its data-ready flag. This bit will

be set if the 6522 has detected a negative edge on control pin 1 (CA1), which is the ready line.

If the printer is busy or has yet to send the ready pulse, keep testing the bit until the printer is ready. When the printer is ready to receive data, store the character to be printed in the output register for port A. As you place the character in the output register, it's clocked into the printer's internal register because pin CA2 goes low and acts as the data strobe. The printer becomes busy while accepting the character. Once it's processed, the ready pulse is given and the printer will accept another character.

Time-of-Day Clock. Listing 2's routine is a time-of-day clock that continuously displays the time on the screen. The routine uses interrupts so that the clock runs while you develop and run BASIC programs. The routine is compatible with DOS 3.3; DOS disables the IRQ interrupt while it does I/O and then re-enables the interrupt when finished. (I haven't tried

**Listing 3:** This BASIC routine will load and initialize the clock. It will also protect the time display.

the routine with earlier DOS versions. If you plan to, back up your disks in the event of failure.)

My method of implementing the clock involves both timers on one 6522 and a couple of tricks. First, set up timer T1 to interrupt (tick) every 1/10 second. Simultaneously, enable timer T2 to count the number of times that T1 ticks by simply installing a jumper wire to feed the output of T1 to the input of T2. T2 is now counting the number of times T1 ticks. If DOS turns off the IRO interrupt (for I/O). when it is re-enabled T2 will contain the number of clock ticks you missed.

The interrupt service routine for the clock keeps the hours, minutes, and seconds in dedicated locations, Whenever the seconds count is changed, the top line of the screen is updated with the current time. The BASIC routine in listing 3 will set up the current time of day and protect the top line. From then on, time will be displayed continuously. The clock routine can determine execution times of routines or schedule other events at certain times during the day. Because no two Apples have identical time bases, some correction factors may have to be used. The listing indicates where to apply those factors.

#### Conclusions

• The Apple parallel board may be used for all interfacing projects where parallel I/O is needed or where timing or counting is required.

The board contains two 6522 support chips for input or output, timing or counting, and serial-toparallel/parallel-to-serial operations.

The board is available fully assembled, as a kit, or alone. The kit is easy to build, but you must be able to read a circuit diagram.

 Documentation is sparse, though all required information for use of the 6522 is included. The manufacturer does not hold your hand, relying instead on the user community to publish software that uses the board.

• The Apple parallel board is a good. inexpensive way to enhance the Apple with the power of the 6522 Versatile Interface Adapter.

# Help!

#### HELP IS COMING FOR ALL PERSONAL COMPUTER OWNERS:

Stop going broke buying software and hardware to find out it's not what you want!

The Personal Computer Owners Directory can eliminate a lot of wasted time and aggravation. Through the use of the directory, you can become aware of people in your area and nationally who have the same system or interests. Find out what is worth buying before spending your \$\$\$\$. The directory will be listed by cities and interests (e.g.) Games, business, art, robotics, education, etc.)

To have your information listed and place your order for the Directory, SEND \$19.95 ppd (check or money order) plus the following:

Name, Address, Computer Type, Interests, will you help others, are you willing to trade information? Plus any other vital information.

If you want your name entered, but do not wish to receive a directory, send \$1.00 and the above info.

The directory will be open for listings until May 1, 1982, at which time it will go to print.

MASS, residents add 5% sales

# **BDOS ERROR** DSECTOR

Before disk errors suin your work again order BADLIM.

- BADLIM assures the reliability of your CP/M
- You can use your disks 10 times longer without losing your data AND your time.
- BADLIM checks thoroughly your disk marking all the blocks which have defective sectors. The operating system will know that those sectors should be skipped.
- BADLIM is the only program that gives protection for soft and hard errors.
- The first time BADLIM will list which files in your disk are on bad sectors, so you can take action to correct it.
- But thereafter the bad areas in your disk will be automatically by-passed,
- For CP/M 1.4 single density and for CP/M 2.xx of any format and density. It is a must for Winchester as the media cannot be replaced.

BADLIM cost only \$73. Whatever the reveno you have to use a computer you need BADLIM, Contact your tholler or call us today

# Everybody's making money selling microcomputers. Somebody's going to make money servicing them.

New NRI Home-Study Course Shows You How to Make Money Servicing, Repairing, and Programming Personal and Small Business Computers

Seems like every time you turn around, somehody comes along with a new computer for home or business use. And what's made it all possible is the amazing microprocessor, the tiny little chip that's a computer in itself.

Using this new technology, the industry is offering compact, affordable computers that handle things like payrolls, billing, inventory, and other jobs for businesses of every size...perform household functions including budgeting, environmental systems control, indexing recipes. And thousands of hobbyists are already owners, experimenting and developing their own programs.

### Growing Demand for Computer Technicians

This is only one of the growth factors influencing the increasing opportunities for qualified computer technicians. The U.S. Department of Labor projects over 100% increase in job openings for the decade through 1985. Most of them new jobs created by the expanding world of the computer.

### Learn at Home In Your Spare Time

NRI can train you for this exciting, rewarding field. Train you at home to service not only microcomputers, but word processors and data terminals, too. Train you at your convenience, with clearly written "bite-size" lessons that you do evenings or weekends, without going to classes or quitting your present tob.

Your training is built around the latest model of the world's most popular computer. It's the amazing TRS-80<sup>TM</sup> Model III, with capabilities and features to perform a host of personal and business functions. No other small computer has on much software available for it, no other is used and relied on by so many people. And it's yours to keep for personal or business use.

(TRS-80 is a trademark

division of Tandy Corp.)

of the Radio Shack

You get plenty of practical experience. Using the NRI Discovery Lab® that also comes as part

of your course, you build and study circuits ranging from the simplest to the most advanced. You analyze and troubleshoot using the professional Beckman LCD digital multimeter you keep to use later in your work. Then you use the lab and meter to actually access the interior of your computer...build special circuits and write programs to control them. You "see" your computer at work and demonstrate its power.

Become the Complete Computer Person

You're also trained in writing and debugging both BASIC and advanced machine language programs...gain hands-on experience in the operation and application of computers to business and personal jobs. You're trained to become the fully rounded, new breed of technician

who can interface with the operational, programming, and service facets of today's computers. You're ready to take your place in the new electronic age.

### Other Opportunities

NR1 has been giving ambitious people new electronic skills since 1914. Today's offerings also include TV/Audio/Video Systems servicing with training on our exclusive computer-programmable 25" diagonal color TV... Communications Electronics for servicing and installing microwave, broadcast, CB, radar, etc...and other state-of-the-art courses

### Free Catalog...Mail Card No Salesman Will Call

Send the postage-paid card for our 100-page catalog showing all courses with equipment and complete lesson plans. There's no obligation other than to yourself. See how NRI can help you grow with the most exciting and important new field of the 80's. If card has been removed, please write to us.

Webster's Microcomputer Buyer's Guide, Tony Webster. Rochelle Park, NJ: Hayden Book Company, 1981; 326 pages, 26.5 by 21 cm, softcover, ISBN 0-9594624-2-2, \$25. Without Me You're Nothing: The Essential Guide to Home Computers, Frank Herbert and Max Barnard. New York: Pocket Books, 1981; 304 pages, 20.5 by 13 cm, softcover, ISBN 0-671-43964-2, \$5.95.

This is a list of books received at BYTE Publications during this past month. Although the list is not meant to be exhaustive, its purpose is to acquaint BYTE readers with recently published titles in computer science and related fields. We regret that we cannot review or comment on all the books we receive; instead, this list is meant to be a monthly acknowledgment of these books and the publishers who sent them.

### BYTE's Bugs

### Inflated Bug

Joe Hadleman's inflation calculator program in the July 1981 BYTE has a bug in line 440, page 302. (See "Computing Inflation with the Consumer Price Index," page 300.) If:

### STRS(P2-INT(P2))

is less than 0.01 (in other words, if the rounding error is less than a penny), the calculation is handled in scientific notation and the output is garbage. To correct this, insert:

OR IF (P2-INT(P2))<.01

before the "THEN" of line 430.

# **BYTELINES**

# News and Speculation about Personal Computing

Conducted by Sol Libes

Random Rumors: IBM is rumored to be increasing production of its personal computer system, with 175,000 units expected to be sold before Christmas 1982. IBM will probably soon announce a graphics package and X,25 communications options for the personal comouter. Epson America is expected to introduce several video terminals, including one with a flat screen. The rumor is that they will be shown at the NCC (National Computer Conference) in June; look for Sinclair, Sony, and Hitachi to introduce similar products at NCC, Also due at NCC are 80- and 160-megabyte 8-inch Winchester hard-disk drives from Micropolis and 16- and 30-megabyte 514-inch Winchesters from Control Data Corp. . . Reportedly, a 15-inch flat-screen monitor is due from Japan shortly. . . . DEC (Digital Equipment Corporation) is expected to introduce a PDP-8 replacement, a 16-bit version of its recently introduced personal-computer board for the VT-100 terminal, and a complete personal computer, incidentally, DEC is budgeting \$500 million for research and development, with half going to software development and its 2000-member software development team.... Hearsay has it that Centronics is working on a ribbonless dot-matrix printer..., NEC (Nippon Electric Company) is supposedly about to introduce two new systems in the U.S., both of which are already on the market in Japan: the PC6000, a consumer-oriented machine, and the PC8800, an 8086-based machine for the

business market. . Commodore is said to be working on a new version of the VIC computer for introduction early next year. The unit should have 256K bytes of memory and 80-column black and white or color video display.... Look for the upgrade of the Osborne-I to be introduced later this year. It's rumored to have an 80-character-wide display (versus the current 52-column unit), double-density floppydisk drives, a built-in modem, and a communications package. A significant jump in price will probably accompany it. . Toshiba is also expected to introduce into the U.S. a product it's already selling in Japan-a Z80-based system that runs CP/M. T-Basic, and UCSD Pascal.

Andom Bits: At the recent Comdex show held for dealers, emphasis changed from the hobbyist to a business orientation, with Apples and TR5-80s all but replaced by integrated business systems. This change should be reflected in computer stores NEC, Toshiba, shortly... and Okidata Corporation are currently supplying samples of 256K-bit dynamic memory devices and expect to start volume delivery in lune. These ICs should begin showing up in equipment by the middle of 1983 ... S D Systems will introduce yet another local-network system called MARS/NET... Mitsubishi is supplying samples of its 514-inch Winchester disk drives and half-wide floopydisk drives: Toshiba is also considering sale of its 51/4-inch Winchester in the U.S. Shugart's half-height 51/4-inch

SA210 floppy-disk drive will make its first appearance in Xerox's new Sabre line of electronic typewriters..., WD (Western Digital) is expected to shortly introduce a single-chip Winchester controller that replaces 25 TTL (transistor-transistor logic) parts. Also due from WD is a new floppy-disk drive controller IC that incorporates the data separator, comparator, and write-precompensation circuits missing from current controllers. . IBM recently opened its tenth computer store; more are in the works. .. Seagate has introduced a 6-megabyte, 514inch Winchester with removable media Emulog of Freemont, California, has introduced a full-feature video terminal with a \$465 list price .. HP (Hewlett-Packard) has separated its personal-computer operation from the calculator division and created a Personal Computation Group. HP has also increased dealer discounts on models 80, 85, and 125 systems by as much as 25 percent over previous discounts.... Radio Shack has beaten Apple into the 16-bit market with the introduction of its new Model 16. 68000-based microcomputer. For more details on this machine and other new products, see page 40. Radio Shack has also established an online videotex-information data-base system for subscribers in the Forth Worth

Unix Royalty Fees Cuts Western Electric recently introduced its Unix System III update which combines Version 7 Unix and the PWB (Programmer's Workbench) into a single system. Some enhancements have also been added. They raised the source code license fee to \$43,000 but lowered the distribution deposit from \$50,000 to \$25,000 against royalties. The royalty fees have been reduced to \$100 for a single user and \$250 for systems for 2 to 16 users. (Previously, a license cost \$1500 plus \$250 per user.)

Royalties prepaid under the old rates will not be refunded. Licensees will, in effect, start with a clean slate. Hence, Microsoft will lose the \$200,000 it had prepaid to obtain a discount advantage, an advantage it no longer has.

The reduction in royalty fees removes what has been a significant deterrent for people wishing to use Unix. namely that it was very expensive. This should increase competition among Unix and its look-alikes. More important, it puts Unix in a much better position to compete with other single- and multiuser operating systems such as CP/M-86 and MP/M-86. Microsoft's president, Bill Gates, indicated that despite his unhappiness about the lost royalty payment, the royalty change would help his company sell copies of Xenix, its version of Unix,

da Update: Ada is finally becoming available as a working language. Telesoft Incorporated of San Diego, California, released its Ada package for 68000 systems last August, and RR Software of Madison, Wisconsin, in November released lanus, a

version for Z80 computers running CP/M. Both compile subsets of the Ada language. The Telesoft Ada compiler retails at \$2400, while Janus sells for \$250.

The DOD (Department of Defense) holds the trademark on the name "Ada" and stipulates that commercial companies can use the name only if they have or are developing a full-language compiler. To acquire legal access to the name "Ada," a company must submit its product to a DOD Adavalidation office for approval. Validation will ensure that programs written with the compiler will be fully portable between computers. Portability of that type doesn't exist for system-oriented languages such as Pascal, FORTH, and C.

Western Digital, based in Irvine, California, has also demonstrated its microAda and expects to be the first company to submit a complete Ada compiler to the DOD for validation. WD plans to submit it within the next 3 to 4 months. The WD Ada will run only on WD's new PAL 16-bit computer; a WD microAda license will cost \$2000.

SuperSoft Associates of Champaign, Illinois, has demonstrated its Ada compiler for Z80 systems, also expected to be ready for submission to the DOD for validation sometime this year, SuperSoft intends to release Intel 8086/8088. Motorola 68000, and Zilog Z8000 versions, with the Z80 version to sell for under \$300.

Telesoft is developing versions of its Ada compiler to run on the 8086, DEC VAX, and IBM 370 machines. Intel has developed an Ada compiler for its iAPX432 32-bit microcomputer currently running at beta test sites. Intel is preparing to submit the compiler for DOD validation.

And Ethernet's Fate? A report issued by Strategic Incorporated, a marketresearch firm in San Jose, California, predicts Xerox Corporation's Ethernet localarea network will be a total failure within two years. According to Strategic's president. Michael Killen, "Xerox is headed for the worst failure in the company's history." He believes that Xerox lacks technological and price advantages, sales force, and customers interested in buying large systems. Further, he contends that Ethernet's baseband approach to local networking will prove inferior over the long haul to the broadband approach taken by Xerox's competitors. He points out that broadband systems are better suited to carry video. heavy voice and data transmissions, among other applications.

In response to the report, Xerox issued the following statement: "Based on the level of customer satisfaction with our existing network installations, the backlog of orders for network products and service, and the interest in Ethernet on the part of major accounts, we are confident that Xerox will be a leading vendor in office automation."

Bell Set to Move Into Computer-Related Markets: AT&T (American Telephone and Telegraph) is undergoing a major management reorganization to comply with the FCC-required separation of regulated and deregulated activities. As a result, look for the Bell System to become an unbridled competitor in computer-related markets. It will probably begin marketing terminals and business computers soon, competing directly

with companies such as IBM. Wang, Xerox, and DEC in the intelligent-terminal and work station markets and with Tymnet and Telenet in the communications-processing field. It is unlikely that Bell will compete directly with IBM in the mainframe busi-

The Bell System itself presents a large, captive market for computer products. Actually, the Bell System is IBM's biggest customer outside of the U.S. government. Bell is expected to sell business and personal computers through its many Phone Center stores.

AT&T has also agreed to provide CB5 (Columbia Broadcasting System) with home-computer terminals, data-entry equipment, and transmission facilities for a joint teletext experiment scheduled to begin this fall in New Jersey.

National Amateur Computer Society: The Japan Microcomputer Club is well organized, registers close to 4000 members, and has chapters in every major city in Japan. Hobbyists in England also work together through one central organization, providing an excellent base for the computer industry.

Computer hobbyists have long been the backbone of technological growth, but in the U.S., the hobbyist community is fragmented into several hundred independent clubs. A handful of clubs have over 1000 members, but most include fewer than 100. While some attempts have been made to found a national organization, none has succeeded.

Personal computing as a hobby is a breeding ground for computer professionals of tomorrow. Therefore, it's vital that we organize a national

amateur computer society while we are still the world's technological leader in com-

P/M Goes Into Firmware: Digital Research has signed an agreement with Intel which will allow the latter. to sell ROMs encoded with the CP/M-86 operating system. The ROM will also contain timers and some logic; it should be available by mid-year. The ROM is intended for use in a CP/net system where systems containing CP/M in firmware don't have any disk but must communicate with a CP/M or MP/M server.

Intel will also sell CP/M-86 and MP/M-86 on disk for its single-board and 86/330 system. Intel has contracted with Microsoft for its MS-DOS (used on the IBM personal computer). Intel will sell its own RMX-86 DOS and plans to acquire Unix from Western Electric. Hence, Intel users and systems houses will be able to select among a wide variety of operating systems. Intel also expects to market applications software.

Igital Research Buys MT Microsystems: Digital Research has acquired its second software company in less than three months by purchasing MT MicroSystems Incorporated of San Diego. California, supplier of Pascal/MT. Previously, Digital Research had purchased Compiler Systems Incorporated, supplier of CBasic.

xxon Buys Out Zilog: Over the years, Exxon Corporation has moved from a minor investor in Zilog Incorporated, supplier of the Z80, to a major investor, owning

90 percent of the stock. Zilog has bought the remaining 10 percent and will become a wholly owned Exxon subsidiary. One result is that Exxon will no longer be required to break out Zilog's quarterly earnings for shareholders. Zilog, incidentally, has yet to report a profit. In fact, the Exxon Enterprises operation, which includes all of Exxon's electronics subsidiaries, incurred a loss of \$51 million in the first nine months of 1981.

VI leroprocessor Trends: Did you know that there are currently 51 different general-purpose microprocessors in production, that 17 are 4-bit devices, 14 are 8-bit devices, 6 are 16-bit devices, 4 are 32-bit devices with 16-bit I/O, 4 are bipolar. and 5 are microframe or special (e.g., Intel iAPX432)? Futher, did you know that seven more have been announced but are not yet in production, and that 42 companies currently manufacture microprocessors?

The microprocessor recently celebrated its tenth birthday. Credit for creating the microprocessor goes to Intel. (See this month's Editorial on page 6.) Ten years ago, the

companies that designed micros were mostly small. freewheeling organizations employing a great deal of ingenuity. Today, it is a totally different ballgame. Most of those early pioneers were either swallowed up by large companies (e.g., Zilog and MOS Technology) or are now very large companies (e.g., Intel, AMD, and National Semiconductor). Furthermore, leadership in design and production appears to be passing to the Japanese.

The microprocessor scene has changed a lot over these ten years. The question now is: what are the current trends and directions of the new micros? First of all, suppliers are making micros easier to program. National and Zilog already have micros with software-in-silicon They each provide single-chip computers that execute BASIC statements directly in an interpretive mode. Futhermore, Intel is developing one micro with the capability to execute MP/M and another with a sophisticated on-board operating system. Also, there are rumors of a one-chip FORTH computer. There's no. doubt that both National and Zilog have been successful with BASIC-processing ICs.

Second. microcomputer ICs are getting more sophisticated, having floatingpoint capability, multiply/divide functions, enhanced interrupt handling. and the like.

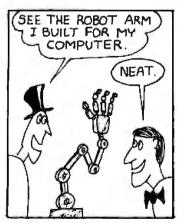

The most glamorous changes will occur in the 16/32 bit micros. All of these devices are getting coprocessors to extend their capabilities into the minicomputer. field. Incidentally, Zilog has disclosed that it's working on a 32-bit micro. If the 8-bit unit is a Z80, the 8/16-bit device is a Z800, and the 16-bit micro is the Z8000, what will its 32-bitter be called? You guessed it! The Z800001 Maybe Zilog would be better off calling it the Z8×104.

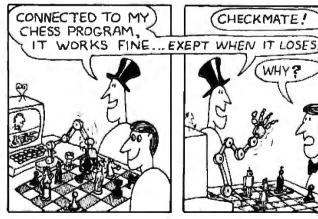

emory Trends. . . or, What is Turbo and Parity? I occasionally look back with fondness to my first micro. It had 256 bytes of memory and used an Intel 8008. That was only 8 years ago. The next year, I graduated to an Altair 8800 that had an 8080, six printed-circuit cards containing 4K bytes of RAM, an I/O channel, and a huge power supply. How times have changed!

The most significant change

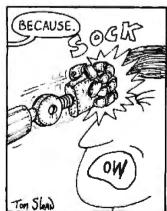

has been in memory. Today the 16K-bit, single-voltage RAMs dominate the marketplace, providing cost savings (mostly by shrinking powersupply requirements), yielding faster operation, and making the 64K-byte computer memory nearly standard. The 64K-bit RAM ICs are just starting to appear, and we find that computer memory sizes of 128K bytes and 256K bytes are becoming more common and will probably become the standard microcomputer memory size by the end of 1983. The 256K-byte RAM chips are now going into production. I expect that by 1985 1 megabyte will probably be the typical microcomputer memory size. Also, as the volumetric memory space decreases, the associated access time decreases, resulting in increased system performance.

Some of the most interesting changes in memory design are improving memory reliability and speed. Memory manufacturers are beginning to introduce multifunction memory systems that perform parity or error-checking and correction functions previously handled by a computer's processor, if they were done at all. In fact. National

Semiconductor has introduced an IC (the DP8400) that performs all the memory error checking and correcting so that the processor is not bothered with this task. Error checking and correction is particularly important with dynamic RAM since these devices are prone to soft (transient) errors due to noise and radio-frequency interference, alpha particles, cosmic rays, and voltage fluctuations.

Manufacturers are also introducing on-board batteries to protect RAM during power failure. With the use of CMOS RAM, an on-board battery can protect data for over a hundred hours, and lithiumiodine batteries have been shown to be able to provide as much as one year of data retention.

The demand for faster computer access to disk drives has generated new cache techniques to reduce seek time and rotational latency delays that account for about 60 percent of throughput bottlenecks. This technique is called the "turbo disk file cache" or "turbo" for short. The turbo eliminates disk seeks to frequently used data by transferring such data to a cache memory (typically 128K bytes) and accessing the data from the cache instead of the disk. The data in the cache is kept current using an algorithm such that the block of data that has gone unaccessed the longest is replaced by the next nearest-in-use block of data. The turbo algorithm considers past use and the probability for future use. Software 2000

Incorporated of Arroyo Grande, California, for example, sells TurboDOS, which it claims runs CP/M software three to five times faster. The company has adapted its software to run on most of the popular S-100 systems, the Xerox 820, TRS-80 Model II, and others.

"By the end of the century, analysts predict, computers and information processing will be the world's biggest business after petroleum." Wall Street Journal, November 10, 1981.

APOLOGY DUE: I regret that in my November 1981 column 1 erroneously reported that Canon was marketing the CX-1 computer via distributors responsible for software support Canon has informed me that it markets the CX-1 directly to dealers and provides software support.

**MAIL:** I receive a large number of letters each month as a result of this column. If you write to me and wish a response, please include a self-addressed, stamped enveope.

# **Clubs and Newsletters**

### Apple Group in Little Rock

The Little Rock Apple Addicts publish a newsletter and hold meetings and program swaps. Guest speakers have shown members how to diagnose ailing Apples and have demonstrated programs and peripherals. Contact Little Rock Apple Addicts, POB 55215. Little Rock, AR 72205.

### Free Newsletter

The Softwaire Newsletter is a free bimonthly publication of the Softwaire Store in Los Angeles, California, It features news about personal and business CP/M software. Also included are reviews of microcomputer books, magazines, and games. Contact the Softwaire Store, 11768 West Pico Blvd., West Los Angeles, CA 90064. (213) 473-1136.

### Llano Estacado **Computer Club**

Llano Estacado Computer Club would like to exchange ideas with other computer clubs. Members are interested in all microcomputers. Write to John L. Peters, Llano Estacado Computer Club, 1509 Fairway Terrace, Clovis, NM 88101.

### Computer Association in Central Texas

The Central Texas Computer Association (CTCA) meets on the fourth Monday of the month at the Farm & Home Savings Building in

Austin, Texas, Club meetings include short demonstrations or informal talks on a variety of subjects relating to personal computers. A monthly journal, PRINT-OUT, has information on hardware and software, new equipment critiques, and a classified ad section free to members. The CTCA is active in community service, with a number of projects underway for the deaf. Membership dues are \$15. Contact CTCA, POB 17303, Austin, TX 78760.

### HUGs in Pittsburgh

The Pittsburgh Heath Users Group (HUG) meets the third Tuesday of every month at the Heathkit store (3482 William Penn Hwy.) from 7 to 9 p.m. For more information. call (412) 824-3564.

### Computer **Dealers Society**

The American Society of Computer Dealers (ASCD) is a new group devoted to promoting sound business practices in the used-computer industry. ASCD intends to cooperate fully with the Computer Dealers and Lessors Association in promoting ethical conduct standards. A code of ethics for ASCD members has been adopted. Meetings will be held twice a year, in February and July. For further details, contact ASCD, 3500 Southland Center, Dallas, TX 75201, or call Jerry Roberts at (313) 689-6200.

### Magazine for War Gamers

The War Machine is a bimonthly magazine dedicated to fans of computer war games. It features news,

reviews of complex games for all microcomputers, and advice for independent software writers. The latest issue can be obtained for \$3 from Emjay, 17 Langbank Ave., Rise Park, Nottingham NG5 5BU. England.

### Two New Groups in Munich

Two new microcomputer groups have been organized in Munich, West Germany. The European Branch of the Pascal Z Users Group has been formed in association with the American Pascal Z Users Group. And the second, the Ithaca Intersystems/S-100 Users Group plans to coordinate Ithaca users' efforts in Europe and to form a program exchange. Both groups can be contacted by writing George Brooke, Sebastian Bauerstrasse 20c, 8000 Munich 83. West Germany.

### Dental Computer News

The Dental Computer Newsletter is a publication serving an international group of dentists, physicians, and office-management personnel who share a common interest in office computers. Members also have access to a software exchange and a computer bulletin board. Dues are \$15 domestic, \$23 overseas, Contact Dental Computer Newsletter, c/o E. J. Neiburger, 1000 North Ave., Waukegan, IL 60085.

# Software Received

Adventure in Time, an adventure game for the Apple II. Floppy disk, \$29.95. Phoenix Software Inc., 64 Lake Zurich Dr., Lake Zurich, IL 60047.

Birth of the Phoenix, a tutorial adventure for the Apple II, Floppy disk, \$14.95. Phoenix Software Inc. (see address above).

Circuit Design System, a digital electronics design and simulation package for the Apple II. Floppy disk, \$149. Smart Software Co., POB 1292, Orem, UT 84057.

Comma Usage/Semicolon and Colon Usage, a punctuation usage tutorial for the Apple II. Cassette, \$20; floppy disk. \$25. LARA Software. 980 Hunting Valley Pl., Decatur, GA 30033.

Context Connector, a Visicalc utility program for the Apple II. Floppy disk. \$180. Context Management Systems Inc., 23864 Hawthorne Blvd., Torrance, CA

Datalink, a telecommunications package in Pascal for the Apple II. Floppy disk, \$100. Link Systems, 1655 26th St., Santa Monica, CA 90404.

Linkdisk, a disk-utility package in Pascal for the Apple II. Floppy disk, \$70. Link Systems (see address above).

Linkindex, a rapid key data-file retrieval system in Pascal for the Apple II. Floppy disk, \$150. Link Systems (see address above).

Linksampler, a tutorial package in Pascal for the Apple II. Floppy disk, \$60. Link Systems (see address above).

Linkvideo, a screen utility in Pascal for the Apple II. Floppy disk, \$55. Link Systems (see address above).

Red Alert, an arcade-style game for the Apple II Plus. Floppy disk, \$29.95. Broderbund Software Inc., 2 Vista Wood Way, San Rafael, CA 94901.

Shadow Hawk One, an arcade-style game for the Apple II. Floppy disk, \$49.95. Horizon Simulations, 107 East Main #2. Medford, OR

Zoom Grafix, a graphics/ printer control package for the Apple II. Floppy disk. \$39.95. Phoenix Software Inc. (see address above).

### Atari

Easytext Word Processor, a word-processing system for the Atari 800, Floppy disk, \$50. Dataworks Inc., 97 Jackson St., Cambridge, MA 02140.

The I Ching, a program for casting and displaying hexagrams for the Atari 800. Floppy disk, \$44.95. Alternate Reality Software, 2111 West Arapahoe Dr., Littleton, CO 80120.

Shadow Hawk One, an arcade-style game for the Atari 400/800. Floppy disk, \$49.95. Horizon Simulations. 107 East Main #2, Medford, OR 97501.

### CP/M

Office System 80, a utility system for the CP/M operating system. 8-inch floppy disk, \$195. The Information People, 443 Hudson Ave... Newark, OH 43055.

Quickscreen, a screen-formatting program for the CP/M operating system. 8-inch floppy disk, \$149. Fox and Geller Associates Inc., POB 1053, Teaneck, NJ

The Formula, a multifunctioned, business-oriented data-processing package for CP/M. 8-inch floppy disk, \$595. Dynamic Microprocessor Associates, 545 5th Ave... New York, NY 10017.

XLT86, an assembly-lan-

guage conversion utility to convert CP/M programs to CP/M-86. 8-inch floppy disk, \$150. Digital Research Inc., 801 Lighthouse Ave., POB 579. Pacific Grove. CA 93950.

### **TRS-80**

LOG, a simple database management program for the TRS-80 Models I and III. Floppy disk, \$44.95 (Model 1), \$49.95 (Model III), KSoft. 318 Lakeside Dr., Brandon, MS 39042.

Modem 80, a telecommunications software package for the TRS-80 Models I and III. Floppy disk, \$39.95. The Alternate Source, 1806 Ada St., Lansing, Ml 48910.

Smart Terminal, a telecommunications software package for the TRS-80 Models I and III. Cassette, \$69.95.

Howe Software, 14 Lexington Rd., New City, NY 10956

Uniterm, a telecommunications software package for the TRS-80 Models I and III. Floppy disk, \$29.95. BT Enterprises, 171 Hawkins Rd., Centereach, NY 11720.

### Other Computers

Quadcube, an extended graphics simulation of the Rubik cube puzzle for the Texas Instruments TI-99/4. Cassette, \$14.95. Linear Aesthetic Systems, POB 23, West Cornwall, CT 06796.

The ZX80 Business Package, a business-oriented program package for the ZX80 and MicroAce computers. Cassette, \$9.95. Lamo-Lem Laboratories, POB 2382, La Jolla, CA 92038.■

This is a list of software packages that have been received by BYTE Publications during the past month. The list is correct to the best of our knowledge, but it is not meant to be a full description of the product or the forms in which the product is available. In particular, some packages may be sold for several machines or in both cassette and floppy-disk format; the product listed here is

the version received by BYTE Publications.

This is an all-inclusive list that makes no comment on the quality or usefulness of the software listed. We regret that we cannot review every software package we receive. Instead, this list is meant to be a monthly acknowledgment of these packages and the companies that sent them. All software received is considered to be on loan to BYTE and is returned to the manufacturer after a set period of time, Companies sending software packages should be sure to include the list price of the packages and (where appropriate) the alternate forms in which they are available.

### BYTE's Bugs

PC: The Independent Guide to the IBM Personal Computer is a bimonthly publication, not a monthly as stated on page 60 of Gregg Williams' article "A Closer Look at the IBM Personal Computer" (January 1982 BYTE). Subscriptions to the magazine cost \$12 for six

Please note that the new address for PC: The Independent Guide to the IBM Personal Computer is 1239 21st Ave., San Francisco, CA 94122, (415) 753-8088.

# **Ask BYTE**

### Conducted by Steve Ciarcia

### Speech Synthesizer Application

Dear Steve.

I read with great interest your article, "Build an Unlimited-Vocabulary Speech Synthesizer" (September 1981 BYTE, page 38), and have found a possible use for it. 1 have a Perkin-Elmer 3220 computer and would like to use the synthesizer to answer telephone calls into the computer, mainly to respond to salesmen who have phoned orders into the computer. The synthesizer would respond with appropriate messages, telling the salesmen if transmission was successful or what problem occurred. Could the synthesizer feasibly be used in this capacity on my computer, with or without modifications, and what modifications would be necessary, if any? Derek Pitcher Highland Park, NI

The speech synthesizer reguires only a Centronicscompatible parallel output port commonly used for printers. The port comprises 9 output lines and 2 input lines. If your computer has this capability, then the synthesizer can be easily interfaced as described in the article.

Your application is an excellent one. Many companies, including Ma Bell, use speech synthesizers on the telephone. Listen carefully the next time you dial a phone number that has been changed. . . . Steve

### Problems with **EPROM**

Dear Steve. I was very glad to see your article, "Build an Intelligent EPROM Programmer," in the October 1981 BYTE (see page 36). For the past several months. I have been trying to build a circuit to program EPROMs (erasable programmable read-only memory) using my homebrew 6809 computer and three output ports from 6820 Peripheral Interface Adapters. It was a bit of a surprise to see that my circuit is almost the same as yours. Mine does not work, however, and I can't figure out why.

I am using the 5-volt-only version of the 2716 EPROM. and my timing is done by a wait loop in software rather than by the one-shot TTL (transistor-transistor logic) device that you used. When I try to program a "knowngood" 2716, it comes out with about one-fourth the bytes programmed (the rest are hexadecimal FF), and those bytes that are programmed are not necessarily right,

I checked all the address lines and data lines over and over again. I even singlestepped through the program, monitoring all the voltages as I went. Every pin is what it should be, but it just doesn't work right. I was wondering if you knew of any little idiosyncrasies of the 2716 that may cause such a symptom. Did you run into any such trouble with your circuit7

Matthew G. Cimbala State College, PA

It sounds as if you have a software problem in which the addresses are not being placed on the EPROM in the right sequence. Perhaps your address-incrementing routine is resetting too soon.

The fact that you are getting data into the EPROM

(assuming that all bytes were hexadecimal FF prior to programming) indicates that the program timing loop is okay. The 2716 is a very reliable EPROM and I am not aware of any idiosyncrasies that would cause this problem. I suggest you leave it alone for a few days and then walk through the software, paying close attention to your indexing instructions. . . Steve

### Modem Interface

Dear Steve.

I acquired an acoustically coupled modem made by Multi-tech Systems from New Brighton, Minnesota, This is the model FM 30: it has a full- or half-duplex switch on the bottom and also what appears to be an RS-232C input connector. I was wondering if you could provide any information on interfacing this with my Apple II Plus. Would one of the commercial interfaces work, such as the Apple Communications board or Mountain Computer's CPS Multifunction card? Any information would be greatly appreciated.

Steven M. Babick Dolton, IL

Any board that provides an RS-232C serial input will be adequate to interface your modem to the Apple II Plus. The commercial interfaces that you mentioned are fine for this purpose.

For an explanation of how modems work, and some of the terminology associated with them, refer to my article, "A Build-It-Yourself Modem for Under \$50," in the August 1980 BYTE, page 22. . . Steve

### High-speed Printers

Dear Steve,

I would like to build a 16-bit microcomputer system to drive a 600-line-per-minute printer. Printers like that are advertised in BYTE, but I have my doubts that anything can actually print at that speed. What do you think?

Colin Morris New York, NY

Six-hundred-line-per-minute printers do indeed exist. Your doubts as to anything printing that fast are natural, especially if you are used to seeing a dot-matrix or daisywheel printer printing one character at a time. The higher-speed printers print a whole line at a time (like the old mechanical adding machines) and can be driven much faster.

I think the ultimate in printers is the IBM laser printer. It is capable of 1800 lines per minute. It works by having the laser, acting like the electron beam of a TV screen, scan a metal plate. The plate becomes charged, and the image is transferred to paper much like a xerographic photocopier. The problem with this type of printer is the manpower necessary to load and unload the boxes of paper that are used. ... Steve

### Level | Tape Format

Dear Steve.

I wrote a program that brought data from the tape and stored them in memory of my TRS-80 Model I so that I could examine them. But the data format did not match any listed in my references. Part of the problem was that I was using a Level I BASIC machine and reading programs like Eliza, Micromovie, and Pyramid 2000.

So I modified my program to read Level II tapes and sure enough, the formats were correct. Can you tell me where to find the format for Level I tapes? **Bob Fabiano** El Cajon, CA

Radio Shack has machinelanguage programs for converting your Level I BASIC programs and data files into the Level II format. They are called CONV and DCONV, respectively, and are furnished free of charge when a Level I machine is upgraded to Level II. See your local Radio Shack dealer.

The Level I cassette-tape format can be found in The Custom TRS-80 and Other Mysteries by Dennis Kitsz. . . . Steve

### Computer Lab Essentials

Dear Steve.

I am a sometime practitioner of simple chip and microprocessor designs. I am approaching retirement in a few years and I'd like to build more ambitious projects. To do that I'd like to set up a lab of sorts. Accordingly, I would value your recommendations about the kinds of test instruments I should be thinking about getting. I should tell you also that I have a 35-year-old degree in electrical engineering and, in the mid-fifties, I worked in hardware. The point being I'm not worried about my ability to use dual-trace scopes, voltmeters, and the like.

I'll probably try to build a computer from scratch, I was particularly intrigued by your article, "Build a Computer-Controlled Tank," in the February 1981 BYTE, page 44. Maybe I'll try to tie a specially built computer to a complex model railroad layout. I tell you this to give you an idea of what I think I'd like to do. I'm not especially worried about the price of the test instruments, but naturally I'd like to avoid buying the fanciest Tektronix scope. I'm an experienced kit builder, so if you think a particular Heath scope is a good value and desirable, that might be best.

B. H. Kramer St. Louis, MO

The two instruments that are absolute musts for a computer lab are an oscilloscope and a DVM (digital voltmeter). The 'scope should have a 15 to 25 MHz bandwidth with dual trace and a time-base range between 200 nanoseconds 0.5 seconds (without having to use the time-base magnifier). Vertical sensitivity should be at least 10 millivolts per division. Delayed sweep and trigger view are not necessary. I just purchased a Tektronix 2215 (\$1400), and it is very good for the money. As for the DVM, any 31/2 digit model should suffice.

Other useful equipment would be a function generator and variable-voltage power supply with short-circuit and overload protection.

The above recommendations should suffice for the application that you describe. In any event, this represents the foundation of a good lab system and will require only a modest investment. Enjoy your retirement. . . . Steve

### XENIX™-BASED WORK STATION

Here is the complete, no-compromise UNIX<sup>TM</sup>-based package that gives you full UNIX power at truly minimal cost. Your investment is protected against obsolescence because we use industry standard components. Unlike other UNIX or "UNIX-act-alike" systems, this is a true, complete UNIX Version 7 running on a PDP-11. This is exactly as it was meant to be in the original design and conforms to Bell Laboratories UNIX Version 7 documentation.

### MSD Corporation is making a special offer on our XENIX-based 23/256 Work Station:

 LSI-11/23 based processor with floating point, 256Kb random access memory, 4 port serial interface, 5 quad slots for expansion.

Dual floppy subsystem, single sided (double sided may be specified at additional cost), bootstrap loader, formatting and diagnostic software. 

20.8 Mb Winchester disk with integrated cartridge tape backup. 
One (1) VT-100 terminal with advanced video option.

■ One (1) LA38-HA tractor feed printer with keyboard, numeric keypad and stand. ■ One (1) Auto-Answer, Auto-Dial 300 Baud Modern. ■ Cables for the above. ■ XENIX Operating System, a true UNIX Version 7, configured for 4 users. ■ Complete manual set and 1 year telephone support.

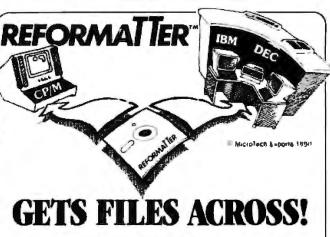

This system is expandable up to 8 users and 83.2 Mb of disk storage. Multiple work stations, terminals, other UNIX systems, or non-UNIX systems can be networked together with no additional soft-Ware

Price: \$23,256. Terms: 25% Down with purchase order, balance 75% upon delivery.

MSD Corporation 2449 Camelot Court, SE Grand Rapids, MI 49506 (616) 942-5060

MANAGEMENT SYSTEMS DEVELOPMENT UNIX and XENIX are trademarks of Bell Laboratories and Microsoft respectively.

With REFORMATTER disk utilities you can read and write IBM 3740 and DEC RT-11 single density formatted diskettes on your CP/M \* system.

REFORMATTER enables you to access large system databases, improve data exchange with other organizations, increase program development capabilities, and use your micro in distributed processing.

REFORMATTER programs feature bi-directional data transfer and full directory manipulation ASCII/EBCDIC conversion provided with CP/M -- IBM. MP/M is now fully supported.

Program Data Sheets, Application Guldes, and Machine Compatihility Guides available

Each program \$195.00 from stock. Specify CP/M ↔ 18M or CP/M -- DEC. Order from MicroTech Exports, Inc., 467 Hamilton Ave., Suite 2, Palo Alto, CA 94301 🗆 Tel: 415/324-9114 🗀 TWX: 910-370-7457 MUH-ALTOS □ Dealer and QEM discounts available.

### Programming the RS-232C Serial Port

Dear Steve.

I have been unable to find any information on programming the RS-232C serial port on the Radio Shack Color Computer, A call to the "hot line" indicated that Radio Shack consultants were somewhat in the dark. although they tried to be helpful. Can you shed any light on this topic?

Martin F. Rooney Troy, NY

The RS-232C serial port on Radio Shack's Color Computer consists of 3 bits of 3 addresses of a Motorola MC6821 Peripheral Interface Adapter (PIA), At address hexadecimal FF20, bit I represents the RS-232C Data Output and is brought out to pin 4 of connector P2. Address hexadecimal FF21, bit 1. is the Status Input line, connected to pin I of P2. Address hexadecimal FF22, bit 0. is the RS-232C Data Input and is connected to pin 2 of P2: pin 3 of P2 is ground.

in software, the only RS-232C device supported by the 8K-byte BASIC is a serial printer, so pin 1 of P2 is not used. Pin 2 is intended to be connected to the printer status or busy line, and pin 4 is the output to the printer, To program the MC6821, a rather elaborate discussion must ensue. An article from EDN magazine, September 20. 1980. "Understanding PIA Operations Increases Your Design Options" by Randy Hutcheson, explains this rather well.

The TRS-80 Color Computer Technical Reference Manual (Cat. No. 26-3193) explains all the input/output ports and has a complete memory map, It is available through any Radio Shack store. . . . Steve

### **Build Your Own**

Dear Steve.

I have read some of your articles and especially liked "Build the Disk-80" (see the March 1981 BYTE, page 36), but I was sorry that it was not designed to work with 8-inch disk drives. I would like to build a computer, perhaps based on Zilog's Z80, with provisions for four 8-inch disk drives and with the ability to directly address 128K bytes of nonvolatile memory. Do you have any suggestions?

W. Edward Kelsey New London, NH

I'm glad to see that there are still some people who enjoy building computers rather than buying them. Your idea of a Z80-based system sounds fine, but I don't plan anything like it in the near future. Below are a few suggestions that may help.

You don't say what your experience level is, but at the risk of sounding like a commercial I would recommend my book, Build Your Own Z80 Computer (a McGraw-Hill publication available from BYTE Books, Peterborough, NH 03458). It contains the necessary information to build a complete computer and configure it any way that you wish.

As for the disk controller and memory, I would suggest that you buy them either as bare boards or assembled and tested. Configure your Z80 to an S-100 bus and save yourself a lot of grief. You will have your fun building the Z80 and you will save a lot of headaches by using prewired boards for the rest of the system.

You then can use bankselectable memory boards and can easily have your 128K bytes of memory.

. . . Steve

### Radio Frequency interference

Dear Steve,

I have been reading your column in BYTE since I first picked up an issue about four months ago. I am writing this on my newly acquired Vector Graphic System B and would deeply appreciate a reply to a nagging question.

The Vector System B installed for word processing in my home is about 15 feet from our TV antenna (located on rafters in the garage-our elevation precludes an external antenna). The system kills channel 2 and distorts 5 and 7. The dealer suggested a Radio Shack filter, which did nothing. I learned from another dealer that the System B uses a crystal oscillator with a frequency near television channel 2.

Please suggest what course of action I should take or what remedies I might initiate myself, such as a radio-frequency filter a novice could install in or around the computer case.

Jacob D. Pottgen New Lenox, IL

I'm glad to hear that you've been reading my column for the past four months. Had you read the January 1981 BYTE on page 48, you would have seen my article on "Electromagnetic Interference." After reading it, you should have enough information to solve your radio-frequency interference problems.

It is important to understand what causes the problem and to recognize that it is difficult to determine what may be radiating the interfering signal. . . . Steve

# Plotting with the TRS-80

Dear Steve.

I would like to find a program that will allow me to make x-y plots of graphs of linear and logarithmic equations and data points. I have a TRS-80 Model III and an IDS-560 printer with graphics capability. I don't need to see the plots on the screen; I only need to be able to print them out on the IDS-560.

Any help you could give me would be most appreciated. Thanks a lot.

Donald M. Lammers Wexford, PA

Programs for x-y plotting are available at your local Radio Shack store. The following two books are quite thorough in the explanation of equations and data points and are directed, naturally, toward Radio Shack BASIC: TRS-80 Programs, Cat. No. 62-2064, and TRS-80 Graphics, Cat. No. 62-2063.

### A Matter of Environment

Dear Steve,

I've taken instructions from a page from your recent book, Build Your Own Z80 Computer, and modified them to "Build Your Own Z8000," which is the source of my problem. The S-100 system I'm designing uses a Zilog Z8001 segmented microprocessor with a 4 MHz 9511 arithmetic processor. Hardware design is a snap so far. (I plan to purchase the Disk-1 floppy-disk controller from Godbout and build all other boards that I need.) The problem will be software; specifically, I need an operating system such as Unix or Unix-compatible Coherent. But Coherent is written in unsegmented code.

### AT LAST

AN AFFORDABLE HARD DISK SYSTEM DESIGNED EXCLUSIVELY FOR THE APPLE 11®

HDS-520 HARD DISK SYSTEM

### **HDS-520 FEATURES:**

- · 5 Megabytes of formatted storage
- · Self-contained (with controller and power supply)
- Uses one computer board slot (number 1 thru 7)
- Compatible with Apple<sup>®</sup> DOS 3.3 and other Apple<sup>®</sup> software
- Manufactured by the same company that designed and manufactures the Winchester Production Test System currently used by Seagate Technology and their major OEM's

### Ask BYTE.

Where can I get an operating system?

This sort of operating system is not the type usually advertised in BYTE: and you know how much good my beautiful hardware is going to be without it. (I'd prefer Unix if available.) The computer is intended as a multiuser, multitasking system. preferably with a FORTRAN compiler, as well as an assembler/editor/debugger.

### Frank Barresi Woodhaven, NY

Your problem is somewhat sticky. The problem is not altogether in the operating system. Unix, like CP/M, does not contain the primitives (software subroutines) for any I/O (input/output), Like CP/M's BIO5 (basic input/ output subsystem), these are totally hardware dependent.

In other words, you might be able to use Unix if you can write the subroutines for the 1/O primitives. Be wary. however: Unix may use some strange hardware-dependent software, but I'm not an expert on Unix and can't be sure of this.

Two good sources of information about Unix are: The July-August 1978 issue of the Bell System Technical Journal, devoted to Unix, available for \$2.98 from Bell Laboratories Circulation Group. Whippany Road, Whippany, NJ 07981; and Using the Unix System by Richard Gauthier. Reston Publishing Co., Reston, VA. 1981.

Get as much information on Unix as you can and study the various implementations of Unix. Pay special attention to system environmental requirements and I/O require-

What it all boils down to is this: if you can make your hardware as much like the proper environment for Unix as possible, it should work. (By the way, I'll let you know when I do anything with the Z8000. Remember what happened to Colossus in the sequel?) Good luck in any event. . . . Steve

### Feasibility Study

Dear Steve,

I am presently studying electronics at a technical school. I have a technical writing course in which we are assigned to do some sort of feasibility study. I have chosen to do mine on the feasibility of purchasing a microcomputer for home use.

I am hoping that you could give me some references and, if possible, pass along some information which would help me in my study. This would be most appreciated.

### Douglas E. Sprague Hancock, ME

There is a wealth of information available on purchasing a computer for home use. The field of home computing is rapidly expanding and makes an excellent choice for a feasibility study,

The following are some references that should be quite helpful: Popular Computing, November 1981: Personal Computing-Home Professional and Small Business Applications by Daniel R. McGlynn, John Wiley and Sons, 1979; and Your Own Computer by Mitchell Waite and Michael Pardee, Howard W. Sams & Co. . . Steve

### VIP Expansion

Dear Steve.

I have an RCA COSMAC VIP with the 20K-byte memory upgrade so that I can use the VIP Floating Point (VIP 711). What I would like is to add a printer. Is it possible to do this with the VIP 7117 I

Circle 145 on inquiry card.

know very little about the 1802 microprocessor.

I also have a TRS-80 with 48K bytes of memory, one disk drive, and a printer, and I have a Quick Printer 2. I would like to hook up the Quick Printer 2 to the VIP, but I don't even know how to start. I have no knowledge of electronics at all. Is this project possible? If so, where would I get the driver for the printer? (I have looked for 1802-based software to drive a printer, but so far, no soap,) Can you help me? Nicholas Mulchin Meadville, PA

The RCA COSMAC VIP is a powerful single-board computer. Unfortunately, there is little support for it in the computer magazines. It does, however, have expansion capability in the form of a 44-line I/O (input/output) interface that will allow almost anything to be added. including up to 32K bytes of programmable memory. It requires a fair amount of technical skill to accomplish the interface.

I doubt if there exists a printer interface such as you are looking for that would simply "plug in" to your VIP. The two manufacturers listed below make interface boards for the 1802 processor, and they may have the necessary information to connect with the VIP: Netronics Research & Development, Ltd., 333 Litchfield Road, New Milford, CT 06776, (203) 354-9375; and RCA Solid State, Box 3200, Somerville, NJ 08876.

Any software must first test the "printer busy" signal. If it is active, the computer must not send data to the printer, or it will not be seen. When the busy signal is low, the 8-bit data character may be sent from the output port

which will cause the printer to print it. When the next character is ready, the process must begin again. . . . Steve

### TTL Data Books

Dear Steve.

I am looking for a TTL (transistor-transistor logic) data book that has descriptions and pinouts for the majority of the manufactured ICs (including the special and less frequently used ICs). Your suggestions are appreciated.

Paul Russo Naples, FL

Every manufacturer of integrated circuits publishes a data book for its product line. One of the most readily available data books is published by National Semiconductor and is available at your local Radio Shack store or through Jameco Electronics. 1355 Shoreway Rd., Belmont, CA 94002, (415) 592-8097. Price lists for various data books can also be obtained by writing directly to the manufacturers. . . . Steve

### March 1982

March

Courses and Seminars from George Washington University. Amsterdam, Netherlands: London, England; Long Island, NY; San Diego, CA; and Washington, DC. Among the courses and seminars to be presented are 'Microcomputers in Control Systems," "Comparative Database Management Systems," and "Structured Programming and Software Engineering." For further information, contact The Director, Continuing Engineering Education, George Washington University, Washington, DC 20052, (800) 424-9773; in Washington, DC, (202) 676-6106.

March

Courses in Structured Systems, various sites throughout the U.S. Courses in "Structured Systems Design" and "Structured Requirements Definition" are being offered by Ken Orr and Associates. For information on meeting times, places, and fees, contact Ken Orr and Associates Inc., 715 East 8th, Topeka, KS 66607, (800) 255-2459; in Kansas (913) 233-2349.

March-April

Computer Network Design and Protocols, various sites throughout the U.S. Participants in this workshop will learn to determine networksystem requirements and to perform design trade-offs, implement network-communication and control protocols, use packet- and messageswitching techniques, evaluate network hardware and software components, interface local systems to networks, and design and build private networks. The course fee is

\$845. Contact Ruth Dordick, c/o Integrated Computer Systems, 3304 Pico Blvd., POB 5339, Santa Monica, CA 90405, (800) 421-8166; in California, (800) 352-8251.

March-April

Fundamentals of Data Processing for Administrative Assistants and Office Support Staff, various sites throughout the U.S. The American Management Associations (AMA) has designed this three-day course for secretaries, assistants, supervisors, and other personnel desiring to learn the fundamentals of data processing and its use in offices. Computer hardware, software, programming languages, and technology will all be covered. The team fee for AMA members is \$470 per individual and \$550 for nonmembers. Individual fees are \$550 for AMA members and \$630 for nonmembers. For a schedule of dates and locations, contact the AMA, 135 West 50th St., New York, NY 10020, (212) 586-8100, To register by phone, call (212) 246-0800.

March-May

Courses from Boeing Computer Services, various sites throughout the U.S. Boeing Computer Services is offering a wide variety of computerrelated courses at its regional service centers. Course topics range from "Introduction to Data Processing" to "Structured Program Development in FORTRAN." For a complete schedule of times, locations, and fees, contact Boeing Computer Services Co., Education and Training Div., POB 24346. Seattle, WA 98124, (206) 575-7700.

March-May
Seminars and Conferences

from Datapro Research, various sites throughout the U.S. Among the topics to be presented are "IBM's Systems Network Architecture," "Data Dictionary/Directory Systems," and "Data Processing: Fundamental Concepts," Enrollment fees are \$640 for Datapro subscribers and \$690 for nonsubscribers. For a complete catalog with descriptions, dates, and locations, contact Datapro Research Corp., 1805 Underwood Blvd., Delran, NJ 08075, (800) 257-9406; in New Jersey, (609) 764-0100.

March-June

Datamation Institute Seminars on Information Management, various sites throughout the U.S. Databases and communications, systems performance, data-processing management, word processing, office automation, computer graphics, and topics of general interest are among the areas to be covered by these two-day seminars. Fees range from \$495 to \$595. For schedules of times and places, contact Karen Smolens, c/o the Center for Management Research, Datamation Institute Seminar Coordination Office, 850 Boylston St., Chestnut Hill, MA 02167, (617) 738-5020.

March-lune

National Computer Graphics Association Seminar, various sites throughout the U.S. The National Computer Graphics Association's (NCGA) Winter/Spring 1982 Seminar program covers such topics as "Computer Graphics: Technology and Applications," "Successful Business Graphics," and "Applications of Computer Graphics to Transportation Problems." Seminar fees are \$395 for association

members and \$425 for nonmembers. For complete details, contact Eloise Wenker, NCGA Seminar, 2033 M St. NW, #300, Washington, DC 20036, (202) 466-4102.

March-June

Intensive Two-day Seminars for Professional Development, various sites throughout New England. Among the seminars to be offered by Worcester Polytechnic Institute are "Fundamentals of Data Processing," "Distributed Systems: The Architecture and Utilization of this Revolutionary Technology," and 'Microprocessors: Hardware, Software, and Applications." Registration fees range from \$445 for a two-day program to \$990 for a 7-day executive institute. For complete details, contact Ms. Ginny Bazarian, Office of Continuing Education, Worcester Polytechnic Institute, Worcester, MA 01609, (617) 793-5517.

March-June

One- and Two-day Professional Development Seminars, various sites in the greater Boston area. Among the courses being offered by Boston University are "Business Writing for Results," "Improving Customer Service," and "Assertive Management." Registration fees range from \$295 for a one-day program to \$445 for a two-day program. These seminars can be conducted within your company. For details, contact Ms. Joan Merrick, Center for Management Research, 850 Boylston St., Chestnut Hill, MA 02167. (617) 738-5020. For information on the in-company seminars, contact Ms. Elaine Dee at the same address.

March-June

Courses and Seminars from Sira Institute, various sites throughout England, Sira Institute is sponsoring seminars on a wide variety of subjects ranging from microprocessor familiarization to design and development of microprocessor-based equipment. For details, contact Conferences &c Courses Unit, Sira Institute Ltd., South Hill, Chislehurst. Kent BR7 5EH, England,

### March-luly

Technical Classes from Zilog. Campbell, CA. Zilog is offering a series of one- to five-day technical classes at its California-based training facility, Topics range from 'Microprocessors: A General Introduction" to "Zeus/System 8000 User." Contact Zilog, Training Dept., 1315 Dell Ave., Campbell, CA 95008, (408) 446-4666.

### March 9-11

The 1982 International Zurich Seminar on Digital Communications, Zurich, Switzerland, The theme of this seminar is "Man-Machine Interaction." Its aim is to present recent advances in theory and application of digital-communication systems. Services, facilities, ergonomics, and their impact on peripheral equipment, systems architecture and design, as well as I/O (input/output) concepts and principles will be covered. For details, contact Secretariat '82 IZS, Ms. M. Frey, EAE, Siemens-Albis AG, POB CH-8047, Zurich, Switzerland.

### March 9-11

Understanding and Using Computer Graphics, Dallas Hilton Inn, Dallas, TX. This seminar is designed for those needing information about interactive computer graphics, including hardware, software, and applications. Headed by Carl Machover, the seminar provides a comprehensive overview of the state of the art in graphics systems. For details, contact Bob Sanzo, c/o Frost & Sullivan Inc., 106 Fulton St., New York, NY 10038. (212) 233-1080.

### March 9-12

Digital Image Processing and Analysis, San Diego, CA. Integrated Computer Systems' course in digital-image processing is designed for engineers, scientists, technical managers, and other professionals responsible for the specification, design, implementation, or application of digital-image processing systems. Among the topics to be covered are image acquisition. image-processing software and database structures, interactive two- and three-dimensional image processing and display, and real-time arrays. Some of the applications examples to be presented are quality assurance and robot vision. The course fee is \$795: on-site courses can be arranged. Contact Ruth Dordick, c/o Integrated Computer Systems, 3304 Pico Blvd., POB 5339, Santa Monica, CA 90405, (800) 421-8166: in California, (800) 352-8251.

### March 9-12

VIO-Voice Input/Output for Computers, Los Angeles, CA. This four-day course is designed for product development and design engineers, systems analysts, programmers, and technical managers involved in the planning, design, and implementation of voice input/output systems. The topics to be covered include voice-processing algorithms and software, evaluating VIO hardware components and systems, utilizing speech-synthesis techniques, and designing voice-recognition techniques. Participants

will have the opportunity to work with devices that permit online generation of computer-voice output, data entry by means of voice input, and voice input for system control. The course fee is \$795; on-site courses can be arranged. For information, contact Ruth Dordick, c/o Integrated Computer Systems 3304 Pico Blvd., POB 5339. Santa Monica, CA 90405. (800) 421-8166; in California (800) 352-8251

### March 10.12

Cincinnati Business Show. Cincinnati Convention Center, Cincinnati, OH, The Cincinnati Business show features the latest in business technology, office systems, and products. Seminars will also be presented. For information, contact Ray G. Nemo, 5679 Creek Rd., Cincinnati, OH 45242, (513) 531-5959.

### March 12-13

The Fifth Annual Computers in Education Conference, Seattle Pacific University, Seattle, WA. Sponsored by Seattle Pacific University and the National Council for Computers in Education, this conference features concurrent talks, workshops, and discussions. Special emphasis will be placed on curricular uses of microcomputers in kindergarten through 12th grade. Contact Tony Jongelan, Everett High School, Everett, WA 98201.

### March 12-14

FantasyLair '82, Ponca City, OK, The Northern Oklahoma Dungeoneers will be sponsoring tournaments and games in role-playing, war simulation, and many other card and board games, Admission is \$10 per day, Contact Shelby Cooper, c/o Northern Oklahoma Dungeoneers, POB 241, Ponca City, OK 74602, (405) 762-6077.

March 15-17

Microprocessor Background for Management Personnel. Albuquerque, NM. This course is sponsored by the Electrical and Computer Engineering Department of the University of New Mexico. The course fee is \$375. For details, contact Dr. Martin Bradshaw. Engineering Continuing Education, University of New Mexico, Albuquerque, NM 87131. (505) 277-4354.

March 15-19

Short Course from UCLA. Boelter Hall, University of California-Los Angeles (UCLA). Los Angeles, CA. "Mechanical Reliability, Design by Reliability, Probabilistic Design-The Stress/ Strength Interference Approach to Reliability Prediction" is a short course being presented by UCLA. The course fee is \$795, which includes comprehensive course notes. For details, contact Dr. Dimitri Kececioglu, Aerospace and Mechanical Engineering Dept., University of Arizona, Tucson, AZ 85721. (602) 626-2495 or (602) 626-3901. In California, call Robert Rector at UCLA, (213) 825-1295 or (213) 825-3334.

Software/expo-West. Anaheim Convention Center. Anaheim, CA. This conference and show is devoted to packaged software. Exhibitors will display a wide range of software products. For additional information, contact Software/expo-West, Suite 400, 222 West Adams St., Chicago, 1L 60606, (312) 263-3131.

### March 18-19

Digital Filters and Spectral Analysis, Boston, MA, Integrated Computer Systems (ICS) is presenting this fourday course for project and design engineers, programmers, and technical managers responsible for implementing

### PRINTERS C. ITOH MODEL 8510

### PRINT FEATURES

Characters: 8 sizes, 5 different alphabets, upper/lower case descendere.

Print Mode: 9xN, exceptional quality combined with proportional spacing

Graphics: 144x144 dots/in. and block graphics.

Print Head: 9 pins, heavy duty designed with air-cooled fans.

Number of Columns: 136 max. Print Speed: 100 CPS.

Print Direction: Bidirectional logic seeking Throughput: From 44 to 52 in./min

Line Spacing: Variable to 1/144 in. Print Width: 8 in, max Form: Folded/Sheet

Form Feed: Tractor and friction, bidirectional

Width: 4.5 in. to 10 in.

Number of Copies: Original plus 3.

advanced digital signal-processing systems and for others who must understand them and their potential. Fundamentals of digital signal processing, fast Fourier transform (FFT) algorithms, and special- and general-purpose LSI/VLSI (large-scale and very large-scale integration) devices are among the topics to be addressed. The course fee is \$795: on-site courses can be arranged. Contact Ruth Dordick, c/o ICS, 3304 Pico Blvd., POB 5339, Santa Monica, CA 90405, (800) 421-8166; in California, (800) 352-8251.

March 12

**Evaluating Decision Support** Software: A Managerial Perspective, Suffolk University School of Management, Boston, MA. This conference is sponsored by the local chapters of six management and computer associations, it will examine the managerial issues involved in choosing decision-support software. The focus will be on end-user characterization, problem diagnosis, needs assessment, and the implications of the evaluation and selection process. Industry experts will speak, Contact DSS Conference, 215 First St., Cambridge, MA 02142, (617) 547-5061.

March 19

The Eleventh Annual International Computer Programs Awards Ceremony and Executives' Conference, Savoy Hotel, London, England, The annual International Computer Programs (ICP) awards ceremony honors super software salespeople, advertising agencies, public relations firms, and achievements in the industry. The executive conference is one and a half days of discussion of the major issues and concerns of the industry. The fee for the executive conference is \$250. For information, contact Carol

Stumpf, c/o ICP, 9000 Keystone Crossing, POB 40946. indianapolis, IN 46240, (800) 428-6179; in Indiana, (317) 844-7461. In England, contact International Computer Programs Inc., 2 Deanery St., Park Lane, London WIY 5LH, England, Tel: 01 499 6621.

March 19-21

The Seventh West Coast Computer Faire, Civic Auditorium and Brooks Hall, San Francisco, CA. Attendance this year is expected to reach 35,000. More than 300 exhibitors and a wide assortment of seminars make this one of this largest annual computer shows. For more information, contact The Computer Faire, 333 Swett Rd., Woodside, CA 94062, (415) 851-7075.

March 22-23

Oasis Level Two Training Seminars, Phase One Systems, Oakland, CA. Using a step-by-step approach to developing applications software with the multiuser Oasis operating system, this seminar begins with program design and proceeds to a careful study of the Oasis system. Topics to be covered are the Oasis BASIC interpreter and compiler, program segments. file structures and I/O (input/output), matrices and matrix I/O, multiline branching structures, and subroutine and error handling.

The registration fee for this three-day session is \$350. Some background in BASIC programming is recommended, Contact Phase One Systems, Suite 830, 7700 Edgewater Dr., Oakland, CA 94621, (415) 562-8085.

March 22-25

Interface '82 Conference and Expo. Dallas Convention Center, Dallas, TX, Cosponsored by McGraw-Hill's Business Week and Data Communications magazines. Interface '82 is aimed at users of data-communication equipment, distributed-data processing, and various networks. For details, contact The Interface Group, 160 Speen St., POB 927, Framingham, MA 01701, (800) 225-4620; in Massachusetts, (617) 879-4502.

March 22-26

Computers/Graphics in the Building Process, Washington, DC. This international conference is sponsored by the Advisory Board on the Built Environment (ABBE) of the National Academy of Sciences and by the World Computer Graphics Association (WCGA). The conference features tutorials, technical paper sessions, and exhibits that reflect the state of the art of computers and computergraphics technology in the building industry. Sessions on case studies, current achievements, and research and development of computer hardware, software, and database programs will be presented. Conference topics include computer aids to management, computer technology, and computer-aided analysis in design development and construction documents. For further details, contact the WCGA, Suite 250, 2033 M St. NW, Washington, DC 20036, (202) 775-9556.

March 22-26

Tutorial Week East '82. Orlando Marriott Inn, Orlando, FL. Tutorial Week East is sponsored by the Institute of Electrical and Electronics Engineers (IEEE) and will consist of 15 tutorials arranged in three tracks: VLSI (very largescale integration) microprocessor interfacing techniques and graphics: aspects of software design, analysis, and techniques; and data communications, computer networking, and databases. Fees are \$90 per tutorial, \$400 all week, for IEEE members, and \$110 per tutorial, \$500 all week, for nonmembers. For information, contact Tutorial Week East '82, POB 639, Silver Spring, MD 20901, (301) 589-3386,

March 23-25

Southcon '82. Sheraton Twin Towers Hotel, Orlando Hvatt Hotel, and Holiday Inn International Drive, Orlando, FL. Among the topics to be presented at Southcon '82 will be artificial intelligence and robotics, office automation. computers and microprocessors, and software. For complete details, contact Robert Myers, c/o Electronic Conventions Inc., Suite 410, 999 North Sepulveda Blvd., El Segundo, CA 90245, (213) 772-2965.

March 26-28

The 1982 Computer Showcase Expo. Atlanta, GA. The Computer Showcase is designed for small-business owners, independent professionals, and corporate managers, Admission is \$7.50. For further details, contact The Interface Group, 160 Speen St., POB 927, Framingham, MA 01701, (800) 225-4620; in Massachusetts, (617) 879-4502.

March 27-28

Amateur Radio and Computer Hobbyists (ARCH) Convention, Chase Park-Plaza Hotel, St. Louis, MO. This convention features exhibitions, workshops, forums, and a flea market. For details, contact Gateway Amateur Radio Association, POB 8432, St. Louis, MO 63132, (314) 361-4965.

March 29-30

Information Utilities '82, Rye Town Hilton Hotel and Conference Center, Rye, NY. The Information Utilities conference will focus on videotex, transactional services, electronic publishing, online database services, cable advertising, and regulations concerning copyright, censorship, and communications. More than 60 speakers are scheduled. For details, contact Online Inc., 11 Tannery Ln., Weston, CT 06883. (203) 227-8466.

March 29-April 1

INFOCOM '82, Las Vegas, NV. INFOCOM '82 is sponsored by the Institute of Electrical and Electronics Engineers (IEEE) Computer and Communications Societies. The conference theme is "Data Processing-Data Communications: The Illusory Boundary." Focusing on the convergence of computer and communication technology. this conference will attempt to bridge the boundary between the two disciplines. Discussions on programming-language and operating system

design, performance evaluation and analysis of computer-communication networks and protocols, standards, and the design of distributed computing and database management systems will be held. Exhibits and tutorials are planned. Write to INFOCOM '82, POB 639, Silver Spring, MD 20901, (301) 589-3386.

March 30-April 2

Digital Image Processing and Analysis, Washington, DC. For details, see March 9-12.

Aneil

Courses in Structured Systems, various sites throughout the U.S. "Structured Systems Design," "Structured Requirements Definition," and 'Management Overview of Data Structured Systems Development" are being offered by Ken Orr and Associates. For information on meeting times, places, and fees, contact Ken Orr and Associates Inc., 715 East 8th. Topeka, KS 66607, (800) 255-2459: in Kansas, (913) 233-2349

April

Knowledge Engineering in the 1980s, Boston, MA. Expert Systems are computer programs that reason in tasks that require considerable human expertise, such as locating computer malfunctions, monitoring intensive-care patients, analyzing noisy signal data, and diagnosing medical problems. This one-day executive briefing provides an introduction to the potential benefits and costs of Expert Systems. For further information, contact Dina Barr, c/o Teknowiedge, 151 University Ave., Palo Alto, CA 94301, (415) 326-6827.

April 1-2

The Eleventh Annual International Computer Programs Awards Ceremony and Executive Conference, Marriott Mountain Shadows Resort, Scottsdale, AZ, The annual awards ceremony honors super software salespeople, advertising agencies, public relations firms, and microcomputer software achievements. The executive conference discusses the main issues and concerns of the industry, such as productivity through proper use of people and machines, new softwarepiracy solutions, and how to get the most out of advertising dollars. The fee for the executive conference is \$250. For detailed information, contact Carol Stumpf, c/o ICP, 9000 Keystone Crossing, POB 40946, Indianapolis, IN 46240, (800) 428-6179; in Indiana, (317) 844-7461.

Auril 2-3

Educational Computing-The Future Is Now, Anchorage, AK, The Educational Computing Conference is sponsored by the Alaska Association for Computers in Education, Invited speakers. exhibits, and demonstrations of microcomputer products for educational purposes will be featured. Admission to the exhibition area is free of charge. For further details, contact Pat Stowers, '82 Educational Computing, Drawer 129, Healy, AK 99743, (907) 683-2278.

April 2.4

The Second Annual Eighty/ Apple Computer Show, New York Statler Hotel, New York, NY. The Eighty/Apple Computer Show features products and services for TRS-80 and Apple computer systems. More than 100 exhibitors of hardware, software, books, magazines, supplies, services, and accessories will attend. For more information, contact Kengore Corp., 3001 Rte. 27, Franklin Park, NI 08823, (201) 297-2526.

Anvil 47

The Seventh Annual Deltak International Training Conference, Access 82, Hyatt Regency, Chicago, IL. More than 1000 training and electronic data-processing professionals are expected to attend 35 workshop sessions. Former president Gerald R. Ford will deliver the keynote address. The registration fee is \$525. Information is available from Gail Bohan, c/o Deltak Inc., 1220 Kensington Rd., Oak Brook, IL 60521, (312) 920-0700.

April 5-7

The Third Annual Office Automation Conference, George R. Moscone Convention Center, San Francisco, CA. This conference is sponsored by AFIPS (American Federation of Information Processing Societies), Exhibits and workshops will be featured. For details, contact Betty Lou Cooke, c/o AFIPS, 1815 North Lynn St., Arlington, VA 22209, (703) 558-3612

Auril 6-8

The Sixth Annual Computerized Office Management Expo-Midwest '82, O'Hare Expo Center, Chicago, IL. This conference and exhibition features business-oriented equipment for word and data processing, information management, record storage and retrieval, and micrographics. A threeday high-technology symposium, "Business Automation and Communications" will highlight Midwest '82. For details, contact Cahners Exposition Group, 222 West Adams St., Chicago, IL 60606, (312) 263-4866.

April 13-10

Digital Image Processing and Analysis, Boston, MA. For details, see March 9-12.

April 14-18

Electronic Home Entertainment Show, Arlington Park Race Track Exposition Hall, Arlington Heights, IL. This show will feature audio and video equipment, video games, home computers, and citizen-band radio systems. It will run concurrently with the Fourth Annual Energy & Home Improvement Faire. Contact Expo Management Inc., Suite S2-132 Arcade, The Apparel Center, Chicago, IL 60654, (312) 329-1191.

privacy will speak on a variety of topics. Training workshops in security planning and risk analysis, disaster recovery and contingency planning, and computer fraud investigation will be held. The fee for the symposium is \$525: discounts on multiple registrations are available. Contact the Security Symposium Registrar, Honeywell Inc., M/S T-99-4, POB 6000, Phoenix, AZ 85005; or call Jerome Lobel, (602) 249-5370.

### May 1982

May-June

Sensors & Systems '82, various sites throughout the central and western regions of the U.S. This series of three-day conferences will cover all aspects of sensor technology from temperature sensors through to displacement, velocity, acceleration. magnetic field, and moisture. Other topics to be covered include signal conditioning. digital interfaces, and system interfaces. Contact Network Exhibitions, 785 Harriet Ave., Campbell, CA 95008, (408) 370-1661.

May 6-9

The Southern California Computer Show & Office Equipment Exposition, Los Angeles Convention Center, Los Angeles, CA. This show features mini- and microcomputers for business, education, government, industry, home, and personal use. Word- and data-processing equipment, office machines, and computer peripherals will be displayed. Admission is \$5. For details, contact National Computer Shows, 824 Boylston St., Chestnut Hill, MA 02167, (617) 739-2000.

May 7-9

The 1982 Computer Showcase Expo, Anaheim, CA. For details, see March 26-28.

May 10-12

Dexpo 82, Marriott Hotel, Atlanta, GA. This exposition features DEC- (Digital Equipment Corporation) compatible hardware, software, and services. Contact Expoconsul International Inc., 19 Yeger Rd., Cranbury, NJ 08512. (609) 799-1661.

May 10-14

The Twentieth Annual Convention of the Association for Educational Data Systems (AEDS), Sheraton Twin Towers, Orlando, FL. This convention includes presentations on the state of the art in educational computing. Administrative and instructional computing applications will presented, and new ways of improving educational processes will be explored. Contact Shirley Easterwood, c/o AEDS, 1201 Sixteenth St. NW, Washington, DC 20036.

May 14-15

The Second Annual Southern California Computers-in-Education Conference. University High Scool, Irvine, CA. This conference covers the application of computers in education from kindergarten through two-year college. All areas of curriculum will be touched upon, including reading, mathematics, science. language, and special education. Hands-on workshops and field trips are planned. Contact Craig Walker, Arrowview Intermediate School, 2299 North G St., San Bernardino, CA 92405, (714) 886-9118.

Applefest/Boston, Hynes Auditorium, Boston, MA. This show will feature more than 200 displays and booths of Apple-compatible products and accessories. Seminars and panel discussions will be held. Ticket prices are \$6 per day or \$15 for a three-day pass. Contact National Computer Shows, 824 Boyiston St., Chestnut Hill, MA 02167, (617) 739-2000.

May 15-16

The North American Computer Othello Championship. Learning Resources Center, Andersen Hall, Northwestern University, Evanston, IL, This two-day tournament is sponsored by the United States Othello Association, Champions will be determined in three categories; microcomputer systems (located on site), mainframe systems (telephone hookup), and specialpurpose Othello machines. For complete tournament details, write to Professor Peter W. Frey, Dept. of Psychology, Northwestern University, Evanston, IL 60201.

May 18-20

Microcomputers-A New Tool for Foresters, Purdue University, West Lafavette, IN. Sponsored by Purdue University's Department of Forestry and Natural Resources and by the Inventory and Systems Analysis Working Groups of the Society of American Foresters, this conference seeks to advance the professional forester's knowledge of microcomputers and to introduce currently available microcomputer applications in forestry. Session themes include hardware and software considerations as well as Information-processing and forest-inventory systems. Contact John W. Moser Ir., Dept. of Forestry and Natural Resources, Purdue University. West Lafavette. IN 47907, (317) 494-3596.

May 19-21

Computer Hong Kong 82, Regent Hotel, Hong Kong. This three-day program, which embraces the Fifth Hong Kong Computer Conference, will focus on the electronic data-processing market. For further details, contact Kallman Associates, 5 Maple Court, Ridgewood, NI 07450, (201) 652-7070,

May 21-23

The 1982 Computer Showcase Expo, Boston, MA. For details, see March 26-28.■

### BYTE's Bits

### **Computer Camps**

The 1982 National Computer Camp for boys and girls ages 10 to 18 will be held July 11 to August 6 in Simsbury, Connecticut, and Atlanta, Georgia. The kids will learn on mini- and microcomputers in small groups with ample hands-on time. The camp director, Professor Michael Zabinski of Fairfield University, is assisted by elementary and secondary school teachers. For more information, contact Michael Zabinski, POB 624, Orange, CT 06477, (203) 795-3049.

In order to gain optimal coverage of your organization's computer conferences, seminars, workshops, courses, etc., notice should reach our office at least four months in advance of the date of the event. Entries should be sent to: Event Queue, BYTE Publications, POB 372, Hancock, NH 03449. Each month we publish the current contents of the queue for the month of the cover date and the two following calendar months. Thus a given event may appear as many as three times in this section if it is sent to us far enough in advance.

# Collector Edition

The Byte covers shown below are available as beautiful Collector Edition Prints. Each full color print is 11" x 14", including 11/2" border, and is part of an edition strictly limited to 500 prints. The artist, Robert Tinney, has personally inspected, signed and numbered each print. A Certificate of Authenticity accompanies each print guaranteeing its quality and limited number.

The price of a Collector Edition Byte Cover is \$25, plus \$3 per shipment for postage and handling (\$8 for overseas airmail). Collector Prints 9, 10, 11 and 12 can be purchased as a set for

\$80, as can Prints 13, 14, 15 and 16.
Collector Edition Byte Covers are also available in the beautiful mat and frame shown above for \$60 each (if Set 9-12 or Set 13-16 is ordered framed and matted, the price per set is \$200). The mat is a neutral gray which blends with most decors, and the

black 12" × 16" frame is trimmed in silver. The print is mounted under

non-glare glass.

Framed and matted prints are shipped UPS-no delivery to P.O. boxes. Because of expense and breakage, no framed prints are shipped overseas. Please allow 4-6 weeks delivery for framed prints.

To order use the coupon below: Visa and Master Charge orders may call Toll Free.

# The Computer Toolbox

Mark Bernstein Department of Chemistry Harvard University 12 Oxford St. Cambridge, MA 02138

Scientists everywhere are learning to detest small computers. They hate the things with a special passion reserved for anything that interferes with their research. Although researchers were among the first to embrace the promise of small, inexpensive computers, many now avoid using microcomputers in their labs.

It oughtn't to be so. Scientists need computers to monitor, coordinate, and control their experiments. Communicating rapidly and reliably with many different instruments, a computer can read and record data while responding swiftly to any problems that develop. The computer cannot grow bored or tired, nor will it object to uncomfortable or dangerous working conditions.

Above all, experimenters need the flexibility and adaptability that computers promise. Labs are exciting, disorganized, chaotic places. Cables run everywhere to connect instruments piled on tables and stacked on the floor. New equipment and new procedures are commonplace; ideas and plans are in continual flux. Even when everything works perfectly, the results of a few hours' work may call for a complete redesign of the entire experiment.

The modern microcomputer is easy and inexpensive to reprogram, so it ought to be a superbly flexible lab assistant. But it is this promise that small computers have betraved. Microcomputers, expected to help scientists manage the constantly changing laboratory environment, implacably oppose every change and trivial modification.

Each change in the experiment calls for new software. Each new instrument needs new software. Every modification of hardware or technique demands new software. The computer's constant hunger for new and revised programs may be so daunting that promising experiments aren't even attempted. Laboratory computers have to be intimately involved with many aspects of the experiment, but this intimacy demands that they change and adapt constantly. Unfortunately, common programming techniques often produce programs that are obscure to read and tedious to modify.

### The Computer Toolbox

Rather than design an inflexible computer for a specific job, our research group has tried to build a general-purpose laboratory assistant that can be carried, like a toolbox, from one experiment to another. It is an integrated, consistent package of hardware and software tools for the experimenter, who should be able to patch together a working system in a few days.

Just as a regular toolbox includes many wrenches and screwdrivers of various sizes, the computer toolbox contains many different "inlets" and "outlets" for information and a collection of interfaces of various sorts. Few experiments use every part in the toolbox; we tried to provide enough interfaces of each type for any experiment we expect to do.

The toolbox includes not only many types of interfaces but also

	*		
Device Type	Useful For	Relative Cost	Suggested Quantity and Comments
parallel input port parallel output port	reading digital devices controlling digital devices on/off controls	inexpensive inexpensive	many many
keyboard	input from people	moderate	1
video display	output to people	expensive	use extra displays for graphica
serial interface	interface printers, computers	moderate	1-5
printer	permanent records	expensive	1
plotter	permanent records	expensive	1
telephone interface	report emergencies	moderate	1 if experiment must run unattended
analog-to-digital converter	analog imput	inexpensive	some
digital-to-analog converter	analog output	moderate	some
sound generator	alarms and warnings	Inexpensive	many distinct noises can be invaluable
digitizing tablet	input from charts and graphs	expensive	if required
joystick stepping motor	input from people moving things	inexpensive Inexpensive	sometimes convenient very useful
AC controller arithmetic processor	power control arithmetic	moderate expensive	several for demanding calculations

Table 1: Widely useful equipment for computer toolboxes.

many interfaces of each different type (see table 1). Redundant facilities add little to the cost or complexity of the toolbox and greatly enhance its usefulness. Because several interfaces of each type are available, adding new apparatus to an experiment is easy. Scientists will not be forced to choose between one instrument and another, because they are free to connect lots of instruments at once.

If an interface circuit is accidentally damaged, redundant interfaces allow work to continue. The computer need not be repaired immediately, and the damaged interface can be fixed at the scientist's convenience. Redundancy makes the system robust, despite the hazards of the laboratory environment.

### Software Design in the Lab

Most laboratory programs live only a few weeks or months. Indeed, many programs are modified so often that they are really never "finished." To make matters worse, laboratory software is written by scientists, i.e., by ingenious, amateur, and relatively unschooled programmers. The lab computer must emphatically encourage clean, comprehensible, modifiable programming.

Lab programmers face a diverse and confusing array of complicated devices, each posing distinct programming problems. Although the procedures for each instrument may be simple, the entire repertoire of communications methods for a complete experimental setup can easily baffle and dismay the programmer. Programs degenerate to an ill-structured network of procedure calls, timing loops, and code conversions, as a profusion of detail overwhelms the program's overall design.

Debugging these tangled, baroque routines is terribly frustrating. The toolbox restores clarity and explicitness to program structure by treating all devices on an equal footing. Toolbox programs never talk directly with any outside instrument. Instead, they communicate with small programs called device drivers that, in turn, communicate with the experiment's instruments and sensors.

Device drivers make programs

# Wed a Data General Eclipse to the **ALPS Word Processing System**

Marry ALPS word processing software with Data General terminals for a complete text entry, editing, formatting and text output system.

The wedding costs about \$4,000.

You get all standard word processing leatures with.

- Fast response.
- "Short Stroke" dictionary facility that provides user defined shorthand and spelling corrections
- Ease of use for minimal training.
- Search and replace leature yields quick replacement of selected characters or strings

Plus these options:

- Foreign language capability for rapid translation and word processing in any Romanized alphabet.
- Dictionary look-up of words and phrases to improve translation production.

For complete information on any ALPS system, contact ALPS, 750 North 200 West, Suite 104, Provo, Utah 8460! Telephone 801 375-0090.

easier to understand and modify. Programmers can concentrate on the experiment without undue distraction from the computer's idiosyncrasies. Device drivers clarify program structure, since irrelevant details need not be represented explicitly. Programs are easier to understand, use, and revise. Documentation is easier to write, and its completeness is less crucial.

Communications between the programmer and the various device drivers are simple and standardized; all device drivers "look" pretty much the same. The device driver, in turn, understands and accommodates the special requirements of each device or instrument. Device drivers shield and protect the toolbox programmer from his confusing and ill-behaved array of instruments (see figures 1 and 2).

For example, different printers may require different character codes, signal levels, and control signals. Nonetheless, all printers are logically equivalent-they all accept characters from a computer and print them on paper. A toolbox program that uses a printer need not consider the details of the printer's interface or timing. Whenever a number must be printed, the program invokes the device driver { PRINT! }, If I replace the printer with a different model, I just revise { PRINT! }, All my programs will still work. If, on the other hand, every program communicated directly with the printer, I would have to modify every program. Indeed, I might need to modify every printer command in every program!

Device drivers help adapt the computer to the changing needs of its peripherals. To plot results on a chart recorder instead of printing them, for example, we need to make only slight changes. Chart recorders are logically equivalent to printers; they just accept numbers from the computer and

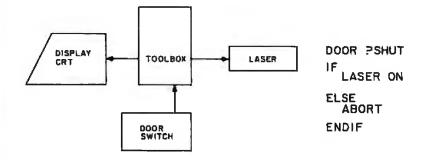

Figure 1: Many scientists defeat the safety interlocks on their equipment because they simply get in the way too often. Simple additions to toolbox programs can help restore protection. Here, a few words prevent the laser from firing if the door is open.

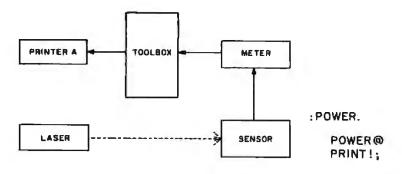

Figure 2: This short program reads the laser's power and prints it. If I buy a new printer, I simply redefine { PRINT! } to work with the new machine. The old program still works with the new printer.

Prices do not include shapping by UPS. All onces and

offers are subject to change without notice

put them onto paper. So, to use the chart recorder we simply replace { PRINT } with { PLOT } and, instead of printing a list of numbers, the computer will draw a graph of the experiment's results.

Device drivers can exchange data with instruments, other toolboxes, even with other computers. In fact, the (still hypothetical) device driver { TELEPHONE! } could connect an experiment to thousands of printers and computers throughout the world.

Programmers don't need to know all the details of every device's design and operation. Of course, the author of the device driver must understand these details, but, since device drivers are all used in pretty much the same way, anyone else can use the device driver.

Tables 2 and 3 describe several device drivers. Drivers that send a single number or character to an instrument have names that end in an exclamation point (1), like { PRINT! }. Drivers that receive a single number or character have names followed by an at sign (@). Device drivers that receive data from an instrument and display it immediately have names ending in a question mark (7), while device drivers that test an instrument's status, and that abort if an error has been detected, have names that begin with a question mark.

In fact, knowing the name of the device driver is often all that a programmer needs to know to use an instrument.

### The FORTH Language

Many computer languages might be suitable for use in the toolbox. The language chosen must be implemented efficiently, especially because small computers tend to be slow and their memory space is often restricted. Invocation, the ability to execute a subprogram by naming it, is required for implementing the device drivers. Other features are convenient, but efficiency and invocation are not expendable.

These considerations exclude the two methods most commonly used to program small computers, BASIC does not support invocation, except

fortably develop programs comprising over a thousand instructions, but experiment controllers often exceed this size.

Several higher-level languages are suitable for programming the toolbox. APL's extraordinary facility for array and matrix calculation easily outweighs its handicaps, Pascal, C. or Ada might also be attractive. Even FORTRAN would be adequate. especially since many scientists already know FORTRAN; this consideration also applies to ALGOL-60 and its descendants.

Unfortunately, currently available microcomputers are rather slow, and thus they demand exceptional efficiency from the toolbox language. Compilers and interpreters for common languages do not now produce sufficiently fast programs and cannot be used. This situation will change as the power and speed of microcomputers improve.

We have used the FORTH language in our toolbox, with very satisfactory results, FORTH has been described in several articles in the August 1980 BYTE, in Ronald Loeliger's Threaded Interpretive Languages (BYTE Books, 1981), and in FORTH Inc.'s Using FORTH. More advanced but invaluable information is available from FIG (the FORTH Interest Group), which publishes assemblylanguage implementations of FORTH for many common microprocessors.

The FIG implementation of FORTH is extremely efficient in both space and speed. Although some common programming tasks are difficult to express clearly in FORTH, the language adapts unusually well to laboratory programming. In fact, FORTH was originally designed for just this application. FORTH interpreters are uniquely simple to test and to modify. Several writers report successful implementations of significant subsets of FORTH in only a few weeks. While FORTH is now commercially available for many computers, its easy implementation makes it a practical choice even if a commercial version is not available.

FORTH procedures communicate with each other by using a first-in, last-out stack (see figure 4), Toolbox

routines use the stack to exchange information. For example, the routine ADC@ measures the input to the analog-to-digital converter, leaving the result on the stack. DAC! sends the number on top of the stack to the digital-to-analog converter, which produces a corresponding voltage.

ADC@ can talk to DACI by using the stack; the program

### ADC@ DACI

reads a voltage at the analog input and transmits it to the analog output. Other programs transform data on the stack, accepting information from one routine, transforming it, and leaving the results for another routine. LOG, for instance, takes a number off the stack, calculates its logarithm, and leaves the result on the stack. The sequence

### ADC@ LOG DACI

sets the output voltage to the logarithm of the input signal,

In FORTH, numbers are simply procedures that put their value onto the stack, "273" is the name of a procedure that leaves the value 273 on top of the stack. FORTH can work in any common base; the procedure HEX instructs FORTH to treat numbers as hexadecimal quantities, DECIMAL tells FORTH to use base ten, and BINARY makes FORTH use base two.

### **Building Toolbox Commands**

A scientist controls an experiment by typing commands into the toolbox. Consider, for example, the simple problem of turning equipment on and off during the course of an experiment.

In Harvard's picosecond laser facility, toolbox hardware includes four 117-V AC outlets controlled by the computer. An experimenter might plug an oscilloscope into socket number 1, a meter into outlet 2, a signal generator into outlet 3, and a laser into outlet 4. At various times during the experiment, the computer must supply and remove power to these devices.

The device drivers for the AC

power controller are named ON and OFF. ON and OFF connect and disconnect power to a specified outlet: the command

### 1 ON

supplies power to socket number one. For flexibility and convenience, we might define a new command called SCOPE:

### : SCOPE 1

Whenever SCOPE is invoked, it leaves the value 1 (the scope's socket number) on the stack, so the com-

### A Note About FORTH

FORTH uses punctuation in some of its words, which makes representing them in text a difficult problem. For example, one FORTH word is ("), which could be taken to mean one of several character combinations. (For your information, the word has three characters and is made from a left parenthesis fallowed by a double quote mark and a right parenthesis.)

To decrease the chance of confusion while trying not to clutter text unnecessartly, we have used pairs of braces, { }, to isolate the character string within as a FORTH word or phrase. For example, the above word would be toritten { (") } , Braces have been used only in the following situations:

when the material being quoted is a phrase of FORTH words (e.g., | 26 LOAD } or { 35 + }.] owith the FORTH words ( ) (period) { , } (comma), { : } (colon), {;} (semicolon), {?} (question mask), {!} (exclamation point), [ ' ] (single quote mark), and { " } (double quote mark) wwith any word using the above punc-

All other FORTH words are set apart by a space on either side of the word. So, in this article, braces always signal a FORTH word or phrase. The

tuation marks (e.g., { \$. } or { . } )

braces are not part of the word or phrase, and FORTH words never use braces within the body of a figure or listing. GW

### SCOPE ON

energizes the oscilloscope. If we decide to plug the oscilloscope into some other socket, we simply change the definition of SCOPE. This "informs" all our programs of the change, so we don't have to hunt through every procedure, looking for references to socket number 1.

Commands can be issued singly or in a large burst, Several commands can be put on one line, or a single command can spread over many lines. Extra spaces, carriage returns, and tabs are harmless and make program listings more attractive and easier to follow. Part of an experimental session might read:

> SCOPE ON METER ON LASER ON **5 MINUTES** LASER OFF

This set of commands turns on the meter, oscilloscope, and laser, waits for five minutes, and then turns off the laser.

If I need to perform this sequence often, it is simple and convenient to group these commands into a single command:

: TEST METER ON SCOPE ON LASER ON 5 MINUTES LASER OFF ;

Typing TEST tells the computer to perform the entire sequence. This particular sequence might be used to check whether all the instruments are working, and procedures called ALIGN, COLLECT-DATA, and SHUT-DOWN could be used for other parts of the experiment. In fact, TEST can be included as a part of another procedure.

Toolbox commands are easy to create. New commands cost only a few bytes of memory. Powerful and subtle commands can be built up from simpler ones. The toolbox actually encourages programmers to write convenient and comprehensible programs. Toolbox programs that are easy to write and modify are in-

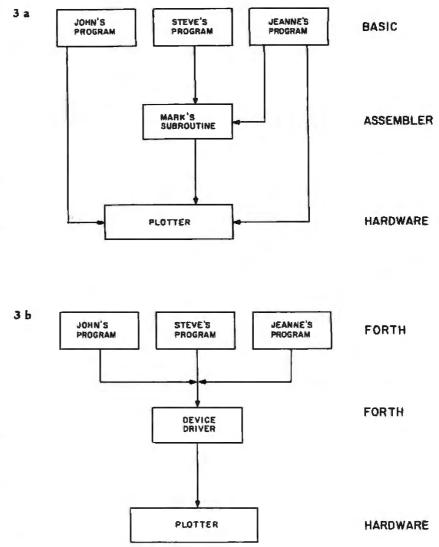

Figure 3: In conventional environments, replacing one hardware device can require many software changes. If the plotter is replaced, many programs must be altered. In figure 3a, John and Jeanne must rewrite parts of their programs, and Mark has to rewrite the assembly-language subroutine Steve and Jeanne both use. If Mark leaves for a new job, Steve and Jeanne may be in serious trouble! As shown in figure 3b, the toolbox insulates users from software changes. If the plotter is replaced, the device driver has to be rewritten, but user programs don't need to be changed.

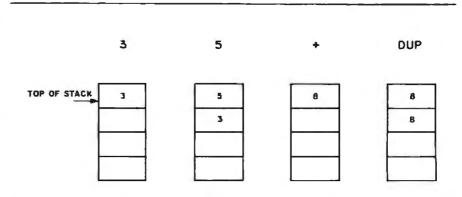

Figure 4: Reverse Polish notation and the computation stack. Reverse Polish makes arithmetic look strange but can be perfectly natural for controlling machines.

herently easy to use; man-machine dialogue is instrinsic in the program's structure, not tacked on as an afterthought.

### Amenities

Scientists work in a number-filled world. Contrary to popular myth. though, most scientists have no special facility for arithmetic. In one Cambridge poker game, the regular players include three chemists, a physicist, a stock broker, and a lawyer. To rapidly count and split pots, all defer to the seventh player-an artist.

Since scientists generally can't do arithmetic any better than other people, lab computers should be able to do it for them. When an unexpected question comes up, the lab computer ought to double as a pocket calculator. Our toolbox provides this facility within the FORTH language. because FORTH can do arithmetic very much like any reverse-Polish calculator.

For example, to add 3 to 7 and print the result, we can simply type

to which FORTH responds

### 10 OK

{ . } is the FORTH command to display the top value from the stack. FORTH's ability to use any common base is often very useful; to translate, say, hexadecimal 4AF to base ten, we simply type

### HEX 4AF DECIMAL .

Clocks and timers are often useful. The command SECONDS instructs the toolbox computer to pause for a specified period. The time-of-day clock may be used (through its device drivers) to ascertain or set the current time. For example,

### 5 47 TIME!

sets the clock to 5:47. The command TIME@ reads the time, leaving the

current time on the stack. CLOCK? prints the time on the TV screen, using an attractive format. Special functions are easy to add; for example, CAL-TIME might print the time in California.

Interestingly enough, our toolbox "clock" is actually a small machinelanguage program. The device drivers for the clock are "driving" a completely mythical device! In practice, the clock's device drivers manipulate a few bytes of memory in which the clock program leaves the current time, but the user is free to believe that the clock is a hardware device inside the toolbox!

Someday we might just install an integrated circuit to replace the "clock" routine. To do that, we'd simply rewrite the device drivers. If a user did not notice the new integrated circuit inside the computer, he might never know about the new clock circuit.

### The Toolbox Development System

The toolbox approach lets scientists apply computers to laboratory problems that tend to resist conventional design and programming methods. Moreover, developments in computer technology will substantially augment the potential of the toolbox in the next few years. Trends in microprocessor architecture favor designs that emphasize the toolbox virtues of modularity and invocation. A microprocessor designed specifically for efficient FORTH implementation, for example, is now under development. The toolbox relies heavily on its abundant input and output devices, and these, too, are subject to constant improvement.

Computer toolboxes are also uniquely suited to incorporate new advances in integrated-circuit technology. New parts can be plugged into the toolbox, often simply by connecting their pins to the appropriate signals on the system bus. New device drivers are easy to write and can use all the existing toolbox facilities.

For example, our toolbox currently includes programs to calculate logarithms. This job could be performed more effectively by an integrated-circuit arithmetic processor. Physically installing such a device would require only a few additional integrated circuits. To install the processor in the toolbox software, we would write device-driver programs to control the math processor's operations. These programs could be written on the toolbox, using the existing toolbox software, and tested by comparing the results of the new and old logarithm routines.

Once a new device has been tested. existing toolbox programs may be modified to take advantage of the toolbox's new capabilities. This unusual flexibility suggests that the toolbox, designed to apply small computers to the scientific laboratory, may be a useful tool for developing computer systems! The toolbox makes no distinction between devices that happen to be inside or outside its box; everything is handled by device drivers. The toolbox, designed specifically to control many external devices, can also configure and control its own internal structure.

The toolbox may, like a snake, shed its skin of peripheral controllers, using them in the end only to create and test a new set of more powerful devices. If a better terminal becomes available, the old terminal can be used to write the new terminal's device drivers. An instrument designed this way could design and test its own successor—in fact, the new model could retain many of the old machine's parts and programs!

The toolbox is easy to customize and simple to modify. It can revise its own language and extend its vocabulary to meet the requirements of its user. It can be connected to many devices and can help test new interfaces and new instruments. In short, the toolbox is a very personal computer.

### Acknowledgments

I'd like to express my gratitude and appreciation to Professor Kevin S. Peters, who patiently supported this work, and to the Merck Corporation for the honor of a Merck Corporation Foundation Fellowship.

# Skip Sequential: A New File Structure for Microcomputers

Jack Purdum Ecosoft POB 68602 Indianapolis, IN 46268

I still remember that fall day almost three years ago at Ecosoft, when we got our first floppy-disk drive up and running. Compared to the cassette system we had been using, it was the greatest thing since fire. It was at that point we began to think that the use of a microcomputer in serious business and research applications was a viable concept. It wasn't much longer before we were sure of it.

Like most disk systems, ours supported both random-access and sequential file structures, Depending upon the intended function, each has certain advantages and disadvantages. Sequential files use disk space very efficiently (an important consideration even with the increased storage capacity of double-density drives), but they are progressively slower on disk accesses as the file size grows. Random-access files are much faster on disk access, regardless of file size, but they require a fixed record length set to the maximum anticipated (i.e., "worst case") size. This often results in a considerable amount of wasted disk space.

The purpose of this article is to discuss a "new" file structure that we developed to help overcome some of the disadvantages associated with random-access and sequential files. The new file structure, which we have named Skip Sequential, is based on such a simple idea that many computerists will wonder why they didn't think of it. It is easy to use, adds little programming overhead, and offers significant advantages over conventional file structures. Although the

text discusses Skip Sequential and its use in terms of North Star BASIC, we have also included listings for Microsoft's BASIC-80. Those familiar with BASIC-80 should have little difficulty implementing Skip Sequential.

### Sequential and Random-Access Files

Before discussing Skip Sequential, it's important to understand the differences between random-access and

> We needed to overcome some of the disadvantages associated with random-access and sequential files.

sequential files. For purposes of illustration, let's assume that you need a program that will store: (1) the customer's name; (2) the amount paid for an item; (3) the date of the purchase; (4) the invoice number of the sale; and (5) a flag variable to reflect whether or not the invoice has been paid. Let's assume that the variables are:

D = Date Sold

N = Invoice Number

A = Amount of the Sale

N\$ = Customer's Name

F = "Paid" flag

(F=1 is "Not Paid")

This data could be easily stored using

either sequential or random-access files. Let's examine these two possibilities

### An Example Using Sequential Files

The program in listing 1 is an example of storing data with sequential files. It is assumed that the values of the variables were determined elsewhere in the program, (If these were actual subroutines, the END statements would be RETURNs.) Line 230 opens the file to be read, while line 240 looks for an end-of-file mark using the TYP command. In North Star BASIC, a unique type will be associated with the data: if it is a string variable. TYP returns a value of 1; if it is a numeric variable, TYP will equal 2; and, if it is an end-of-file mark. TYP returns with a 0. If line 240 finds that TYP is not equal to 0, it falls through to line 250 and reads the data in the file into a set of dummy variables, (Dummy variables must be used so that we don't destroy the new data that we want to add to the file.) Once the end-of-file is found, the branch in line 240 is executed and we write the new data to the file (line 270).

Note that as new transactions are entered, more and more time is spent in the loop formed by lines 240 through 260 looking for the end-of-file mark. Because sequential files require that the entire data file be read before any new data can be written, the time lost looking for the end-of-file is a major limitation of sequential files. On the other hand, a sequential file is a "dense" file (i.e., there are no

wasted gaps in the file). Each new piece of data is tightly packed against the previous piece of data, so disk space is used very efficiently. However, the programmer must decide between optimal use of disk space or faster operation: a choice that usually dictates use of random-access files

## An Example Using Random-Access Files

Listing 2 presents the same type of program as that shown in listing 1. but using random-access files. A major difference between the two programs is that random-access files must use a fixed record length (i.e., each transaction will use exactly the same number of bytes in all instances). The programmer must decide this length, and in making that determination needs to know the following: how many bytes are required to store a numeric variable; how many bytes should be allocated to store string data (including any "overhead" bytes associated with such string variables); and how many numeric and string variables will be used in each record. In our example, we use four numeric variables (D, N, A, and F) and one string variable (N\$).

The first task is to determine how many bytes are needed for each floating-point number stored in the numeric variables. For North Star BASIC, this can be determined by the following equation:

$$B = (P/2) + 1$$

where:

B = the number of bytes in a floating-point number P = the precision of the BASIC

For the standard version of North Star BASIC (8-digit precision BASIC), each floating-point number requires 5 bytes.

To determine the requirements for the name field, the programmer must decide on a string length that will be long enough to hold most customer names, but not so long as to waste

Listing 1: This routine, written in North Star BASIC, adds a record to the end of an existing sequential file.

F	Numeric	5	0-
		Totals: 50	2
		Totals: 50 Record Length: 52	2

**Table 1:** To calculate the fixed record length for a random-access file, simply sum the number of bytes required by each variable (or field) within a record.

unnecessary disk space. In our example, we selected 30 bytes for the name string (N\$). It should be noted that North Star BASIC requires 2 overhead (or housekeeping) bytes for each string that is less than 255 bytes long (3 bytes are required if the string is longer than 255 bytes). We can now determine the fixed record length for the random-access file, as shown in table 1.

Having determined the fixed record length, the programmer can proceed to write the program (see the example shown in listing 2). We have assumed that the programmer has written a 0 (zero) to the file for R (the variable that informs the program of how many previous transactions have been written to the disk). Since R is a floating-point number, the file has 5 bytes in it before it is even used. The

percent sign (%) in line 250 of listing 2 is interpreted to mean "jump the following number of bytes" and write the new record. If this is the first entry, the program will jump over 0 X 52 bytes, plus 5 more bytes. Since 0 X 52 is 0, the program jumps over 5 bytes (jumps over the R variable) and writes the new data. Line 260 increments the record count in R and writes the new value of R at the beginning of the file (the %0 says to jump over 0 bytes, hence rewriting R). The NOENDMARK command informs the interpreter not to write an end-of-file mark after updating R. If the end-of-file mark was written after R, the program would think that the file ended after the first 5 bytes.

The advantage of random-access files is that we don't have to read through the entire file to perform a write operation. By simply reading R and jumping the correct number of bytes (lines 240 and 250 in listings 2), we know exactly where the new data should be written. There is a price to pay for the increased speed, however. If a customer's name is "W, Oz", which is only 5 bytes long including the blank, we must still allocate 30 bytes because of the fixed record requirement of random-access files. We have wasted almost 50% of the record space, a circumstance that is of particular importance when working with the smaller capacities of 5-inch floppy disks. Even the end user might get a little cranky if he knew that half of his disk space was going to waste.

## Skip Sequential: The Best of Both Worlds

The main advantage of a Skip Sequential file is that it has the same speed as a random-access file, but does not require the use of fixed record lengths. This means that it can write data to the disk with the same speed as random access, but does so without wasting disk space. If a customer's name is 5 bytes long, it will use only 5 bytes. We've been using Skip Sequential for almost three years and have virtually eliminated sequential files from our programming choices. In all but the most trivial cases, Skip Sequential beats sequential files, hands down.

**Listing 3:** Initializing a Skip Sequential file requires that a single number be written to the file. Since this number will serve as the file byte counter, and is itself 5 bytes long, it is set to 5 on initialization.

260	CLOSE #0
270	

Skip Sequential is easy to use and requires little programming overhead. Essentially, it is a random-access file with a fixed record length of 1 byte: all we have to do is keep track of the number of bytes already written to the file. To this end we must provide a byte counter when the file is initialized (before using Skip Sequential). The program in listing 3 illustrates this process.

When preparing a file for Skip Sequential, you must first write a single number to the file. The value of that number depends upon the number of bytes required for a floating-point number. North Star BASIC, for example, uses 5 bytes for such numbers, so X in line 240 of listing 3 is set to 5. Line 250 writes the number 5 to the file, and the program ends. Why do we have to write this number? Since we must keep track of the number of bytes written to the file, and the counter is a number which is 5 bytes long, 5 bytes are written to the file when we write the byte counter in line 250. The program in listing 3 has done what it's supposed to do: keep track of the number of bytes in the file-exactly 5. Having initialized the byte counter, we are now ready to use the file.

The program in listing 4 can be used to implement the sample program discussed earlier. Line 240 reads the byte counter, while line 260 says to "skip over" B bytes and then write the new data to the disk. The first time through, B will equal 5 bytes, since only the byte counter is in the file. Note that North Star BASIC "skips" with respect to the beginning

of the data file; some operating systems may do this with respect to the disk head after reading B. If this is true, the byte counter must be initialized to 0 in listing 3. Once the skip is performed in line 260, the new data is written to the disk in the conventional manner.

Disk space is saved through line 270, which sets L equal to the length of N\$. Line 280 increases the byte counter to reflect the number of bytes written to the disk. Since there are four numbers of 5 bytes each, this is added to B, plus the length of the string, L, plus the 2 overhead bytes associated with each string. If the name were "W. Oz", L would equal 5, and the total number of additional bytes would be 27. The byte counter would reflect 32, the total number of bytes in the file (27 new bytes plus 5 for the byte counter itself). Line 300 then writes the new value of the byte counter to the beginning of the file.

Note what happens in listing 4 when a second entry is made to the file. Line 240 returns with 32 in B. The program then skips over 32 bytes in line 260 and writes the new transaction in the proper place in the file. The disk-write operation is actually performed faster than the randomaccess example given earlier, since B does not have to be calculated. Fixed record lengths are not used, so we save the difference between the actual string length and the worst case string length that would have been used with random-access files. As the file grows longer, the savings can be substantial.

It is quite simple to read the file

Listing 4: New records may be added to a Skip Sequential file with this routine. The length of each record varies with the length of N5, the string variable containing a customer name.

340	END

using sequential techniques. An example is given in listing 5. Note that E is equal to 5 in line 230. By using this variable in the same manner as B in listing 4, a comparison of E and B (as in line 310) is equivalent to testing for an end-of-file mark. Since E is updated in line 300, we know that we have read all of the data in the file when E is equal to B.

The program in listing 5 does point out one potential problem. In those cases where N\$ might be empty, line 270 expects to see an N\$ in the file. The simplest way to avoid a type error on a read operation is to set N\$ equal to one blank before writing it to the disk in listing 4. While this does waste 3 bytes, the loss is trivial compared to the other savings of the Skip Sequential method.

#### Updating a Skip Sequential File

Another advantage of Skip Sequential over sequential files is that they can be updated almost as easily as random files. Suppose that we want to use the flag variable (F) to reflect whether or not the transaction is paid. Assuming the F equaled 1 when the transaction was originally written, we now want to update it to a paid status. We will further assume that the new value of F will reflect the date it was paid (although it could be a check number or any other numeric data). Listing 6 contains an example of updating a Skip Sequential file.

Line 250 again sets the end-of-file counter, E. Lines 270 through 310 read the data and update E. Line 330 asks if this is the proper invoice number. If it isn't, line 350 is executed: this tests

```

for an end-of-file condition. If we haven't read all of the data, we go to 290 and read some more. If the proper match is in 330, control is sent to 430 to write today's date (assumed to be in Y) in place of F. Note how this is accomplished. Upon finding a match in 330, E contains the number of bytes read thus far, Since F is a 5-byte number, we need to back up 5 bytes before writing Y in place of F. For this reason, five is subtracted from the variable E in line 430. The rest of the line writes the date, Y, with no endof-file mark, to the file. We are, of course, assuming that Y is also a number.

#### Skip Sequential for BASIC-80

We have also included a program similar to the above but modified for Microsoft's BASIC-80. The program listings are similar to the North Star BASIC versions, but the differences between interpreters do require some changes.

One of the major differences between North Star BASIC and BASIC-80 is that BASIC-80 requires that record length be given when the file is opened. Listing 7 shows how a Skip Sequential file is initialized using BASIC-80. Since we use dollar amounts as one of the variables in the data file (i.e., A), the programmer will

Listing 8: BASIC-80 routine to add a record to a Skip Sequential file. Note that this routine uses an 8-byte record length instead of the 1-byte length used in North Star BASIC.

Distributors, New York, New Jersey and Ohio. New York: 516/482-3500, 212/898-7177, 518/449-5959 Outside N.Y.S.: 800/645-8016 New Jersey: 201/227-5552 Ohio: 216/464-6688 verts the value of M into a string for writing to the disk. This is essentially identical to the use of random-access files in North Star BASIC to this point.

Listing 8 illustrates how the data is written to the Skip Sequential file. The only unusual part of the program occurs betweens lines 390 and 480. Line 390 makes the name held in N\$ an even multiple of 8 bytes. The value of X tells us how many multiples there are, and since we need to know this X value later to read N\$, line 410 saves it in the file as part of the transaction. Lines 440 through 480 save N\$ to the disk as 8-byte records. The remainder of the program is the BASIC-80 equivalent of writing the flag variable and the updated record counter.

Listing 9 is the program to read the Skip Sequential file. The only unusual segment is the reconstruction of N\$ in lines 310 through 330. The updating need not be discussed, since it would be identical to updating any other random file in BASIC-80.

Several improvements could be made to the BASIC-80 version. For

example, X could be "packed" with the date, given the double-precision numbers of BASIC-80 and the fact that X will never exceed four in the sample program. We also think that there may be a way to trick the interpreter into accepting a 1-byte record length instead of 8 bytes, but we haven't experimented sufficiently. Still, Skip Sequential can save disk space over conventional randomaccess files, albeit the savings aren't quite as great.

#### **Concluding Thoughts**

Skip Sequential files do offer many advantages to the programmer and, indeed, the end user. In general, Skip Sequential files may be used for the following: in almost any application where ordinary sequential files are appropriate; in any situation where data is archival in nature (e.g., data backups, transactions, or historical entries); and where only limited updating is required (e.g., setting flags). As a general rule, Skip Sequential strings cannot be updated unless the new and old string lengths are the

same. For this reason, data sets that require frequent updating, such as mail or customer lists, are better suited to random-access files.

Finally, Skip Sequential files can be used in a way that simulates ISAM (indexed-sequential access method) files. For example, if a separate file holds the byte-counter values that exist for the first entry of each month, those byte-counter values can be read first and used to jump to the first entry of the month in the Skip Sequential file. This will further enhance the speed of data retrieval.

While the documentation for the Skip Sequential method has been copyrighted, and we have applied for a trademark on the name, I encourage you to make use of the files. If you plan to make commercial use of the Skip Sequential method, I'd appreciate it if you would contact us first.

#### Acknowledgments

I would like to thank my business associate and friend, Dr. J. B. Orris, for his comments on an earlier draft of this article.

## A Message to our Subscribers

From time to time we make the BYTE subscriber list evailable to other companies who wish to send our subscribers promotional material about their products. We take great care to screen these companies, choosing only those who are reputable, and whose products, services. or information we feel would be of interest to you. Direct mail is an efficient medium for presenting the latest personal computer goods and services to our subscribers.

Many BYTE subscribers appreciate this controlled use of our mailing list, and look forward to finding information of interest to them in the mail. Used are our subscribers' names and addresses only (no other information we may have is ever given).

While we believe the distribution of this information is of benefit to our subscribers, we firmly respect the wishes of any subscriber who does not want to receive such promotional literature. Should you wish to restrict the use of your name, simply send your request to BYTE Publications Inc., Attn: Circulation Department, 70 Main St, Peterborough NH 03458. Thank you.

## **Programming Quickie**

# Finding Words That Sound Alike

## The Soundex Algorithm

Jacob R. Jacobs 1903 Fordham Way Mountain View, CA 94040

The name I am searching for is "Johnson." But is it spelled "Johnson," "Johnsen," "Jonson," "Jonsen," or "Johnson"? The Soundex algorithm can help find words that sound alike by reducing a string to a Soundex code string consisting of a letter and up to three digits.

Alphabetic strings that sound alike generate identical Soundex code strings. The Soundex system is used in the Whatsit data-management system (from Computer Headware, POB 14694, San Francisco, CA 94114) that runs on the Apple, but the program presented here is my own. In the Whatsit program, you can ask, "WHAT SOUNDS (LIKE) JOHNSON?" Whatsit then lists every word it "knows" that sounds like the word "Johnson."

The Soundex algorithm was recently described by P.A.V. Hall and G.R. Dowling ("Approximate String Matching," ACM Computing Surveys, 12, 4, December 1980, p. 388), and it works as follows. We will call the entry-name string E\$ and the reduced output code string R\$. The first character of R\$ is merely the first character of E\$. The remaining letters of the E\$ string are replaced by their group code numbers as shown in table 1. Then all zeros are removed, and consecutive occurrences of the same digit are reduced to a single digit. Finally, the code is truncated on the left to leave one letter and up to three digits.

The Soundex program in listing 1 is written in Applesoft BASIC. To simplify conversion to other BASICs, I will give examples of the Applesoft MID\$ and LEFT\$ functions. A\$=MID\$(B\$,6,4) will set the string variable A\$ to a four-character substring of B\$ starting at the sixth character. A\$=LEFT\$(B\$,2) will set A\$ to the first two (i.e., leftmost) characters of B\$.

The Soundex subroutine beginning at line 1000 of listing 1 will accept the input string E\$ and return the reduced-code string R\$, and it will throw away

nonalphabetic characters. Lines 10 through 40 dimension the arrays E\$ and R\$, which are used for demonstration purposes only. The array W(N) is initialized to the group number corresponding to the Nth letter of the alphabet.

Listing 1: Written in Applesoft BASIC, this program accepts a character string E\$ as input, converts it to the Soundex code string R\$, and prints out all words that have the same code string.

```
10 J = 0
   DIM E$(99),R$(99)
20
   DIM W(26)
   FOR I = 1 TO 26: READ W(I): NEXT
   PRINT : INPUT "INPUT STRING: ":ES: PRINT
   GOSUB 1000
70 J = J + 1
80 R$(J) = R$
90 E$(J) = E$
100 FOR M = 1 TO J
    IF R$(M) = R$ THEK PRINT B$(M)
120
130
    GOTO 50
1000
    REM SOUNDEX SUBROUTINE
1010 L = LEN (E$)
1020 3$ = ""
1030 R$ = LEFT$ (E$,1)
1040 ST = 0
1050
    IF L < 2 THEN RETURN
1060 FOR I = 2 TO L
1070 C = ASC ( MID$ (B$,I,1))
    IF C < 65 OR C > 90 GOTO 1120
1080
1090 C = C - 64
1100 W = W(C)
    IF W < > 0 THEN 3$ = $$ + CHR$ (W + 48)
1110
1120
    NEXT
1130 L = LEN (5$)
1140
    IF L = 0 GOTO 1210
     FOR I = 1 TO L
1150
1160 C = ASC ( MID$ (S$,I,1))
    IF C < > ST THEN R$ = R$ + MID$ (S$,I,1)
1170
1180 ST = C
1190
     IF LEN (R$) > 4 THEN R$ = LEFT$ (R$.4)
1200
1210
    DATA 0,1,2,3,0,1,2,0,0,2,2,4,5,5,0,1,2,6,2,3,0,1,0,2,0,2
1220
```

For example, W(3) contains the number 2 corresponding to the assignment of the letter C (i.e., the third letter of the alphabet) to the group 2. This initialization occurs in line 40, using the data statement in line 1220, and should be done once at the beginning of your main program.

Lines 50 through 130 form a simple demonstration program that stores each word as it is typed in together with its code word. The original word and the code word are stored in arrays E\$( ) and R\$( ), respectively. Each time you add a word, the program prints out all words that have the same code word, finding them by doing a linear search through the code words,

#### The Soundex Subroutine

The Soundex subroutine appears in lines 1000 through 1220. Lines 30 and 40 are also needed to initialize array

W. The first letter of E\$ is put into R\$. If the length of E\$ is 0 (null string) or 1, then the subroutine terminates (line 1050). Otherwise each character of E\$, starting at the second character, is scanned and its group code is put into the intermediate string S\$ unless the character is not a letter or the letter falls in group 0. For example, if we type SOMMERSET, when the program gets to line 1130, S\$ will contain S55623. Next, consecutive occurrences of the same group number will be reduced to a single occurrence of that number. Thus the 55 in S55623 will become a single 5. When the program gets to line 1200, the string R\$ will be S5623. Line 1200 truncates the string R\$ to four characters, becoming S562, which is the code word for SOMMERSET. Let's take another look at the steps. shown before the execution of each line:

Ипе	8\$	R\$	
1030	null	S	
1130	55623	5	
1200	55623	S5623	
1210	55623	S562	

This algorithm has some serious limitations. Although our "Johnson" examples work fine, with the resulting code for the different spellings being J525, "phone" and "fone" do not give the same code because they start with different letters; "Rogers" and "Rodgers" do not work because the d is not in the same code group as g. And words like "tough" and "tuff" do not translate to the same code because g and f are in different code groups. But the Soundex algorithm works well for most words and proper names.

To try the Soundex algorithm, enter the program in listing 1 and run it. Type in some names. Every time you type a new name, the program will list on the screen all the words entered that have the same Soundex code. If you add the line

#### 65 PRINT RS

the Soundex code will also be printed.

#### Applications

The Soundex subroutine has many applications. If you have a card-file program that searches for items by matching a "key" string, rather than returning the message

#### MATCH NOT FOUND

or some such, your program could jump into the "Soundex mode," look for matches that sound similar to the key, and then list them. You could then look through the list of near matches to see if the word sought is in the list. This short Soundex subroutine can add a lot of "flash" to what might otherwise be a mundane program.

#### SYSTEMS

#### Multifunction Desktop Computers

The AWS family of multifunction work stations offer 0.5 megabyte of storage. These desktop work stations are based on the 16-bit Intel 8088 microprocessor and carry a combination of floppy- and Winchester hard-disk drives in the same enclosure as the processor and the display screen. Each AWS work station supports up to 512K bytes of RAM (random-access memory) based on 64Kbyte RAM integrated circuits, an 80-character by 28-line video-display unit. and an optional mass-storage unit. The units can function as stand-alone terminals or as members of a local network by means of a high-speed data link. sharing penpherals and databases.

In single-units, the AWS work station ranges in price from \$3990 to approximately \$11,500, depending on optional equipment. For additional details, contact Pauline Alker, Convergent Technologies, 2500 Augustine Dr., Santa Clara, CA 95051, (800) 538-7560: in California (408) 727-8830. Circle 550 on inquiry card.

#### Single-Board Computer Can Support 56K Bytes of Memory

The Flexi Plus is a 6809-based single-board microcomputer that can accommodate up to 56K bytes of on-board RAM (random-access read/write memory), ROM (read-only memory), and EPROM terasable programmable ROM) in any combination. Flexi Plus features extensive serial and parallel I/O (input/output) capabilities, a 20-milliampere currentloop TTY (teletypewriter) port, and a universal cassette interface. When used without its 6809 option. the Flexi Plus can serve as an expansion board for most 6502-, 6800-, or 6809-based systems.

Optionally, the Flexi Plus can be expanded to include an IBM-format-compatible floppy-disk controller that can support up to four 8-inch drives or three 514-inch drives. Additional options include an IEEE-488 bus controller and a fully buffered RS-232C communications port with programmable data formats and transfer rates from 50 to 19,500 bps (bits per second).

The Flexi Plus costs \$320. The 6809 and the RS-232C options are available for \$75 each. Both the floppy-disk and the IEEE-488 bus controllers cost \$125. Literature is available on request. Contact Robert M. Tripp, The Computerist Inc., 34 Chelmsford St., Chelmsford, MA 01824, (617) 256-3649.

Circle 551 on inquiry card.

## STD Bus Controller Card

The ZT7805 controller card for the STD bus features an 8085A microprocessor, 1K bytes of programmable memory, up to 8K bytes of ROM (readonly memory), IEEE-488 I/O (input/output) and two serial RS-232C ports, and a control monitor with I/O subroutines. The board costs \$650. Contact Ziatech Corp., 2410 Broad St., San Luis Obispo, CA 93401, (805) 541-0488. Circle 552 on inquiry card.

#### Modular Microcomputer

The Sintel-85 is a modular microcomputer training system based on the Intel 8085 microprocessor, It has 2K bytes of ROM (readonly memory] with expandable monitor, 256K bytes of RAM (random-access read/write memory). three programmable I/O (input/output) ports, a 6-digit display with both address and data fields, and a 24-key keyboard with eight command keys and 16 hexadecimal keys.

Sintel-85 can be expanded to include up to 64K bytes of memory and 256 I/O ports. A wide range of expansion and interface boards are available, including A/D (analog-to-digital) and D/A Idigital-to-analogi converters, cassette interface, an immediate expansion board, and audio-visual I/O ports interface. The immediate expansion board augments the basic system with additional RAM, 4K bytes of EPROM (erasable programmable ROM), two counter/timers, and 44 programmed I/O lines. It includes two 8156 units. two 2114 static RAMs, and sockets for two 2716 ROMs. Also available is an I/O expansion board that lets you exercise and simulate I/O instructions, external systems operation, and program debugging. An oscillator lets you oper-

ate a small speaker. For more details, contact Beth Belkin, Government of Israel Trade Center, 350 Fifth Ave., New York, NY 10118, (212) 560-0661, In

Israel, contact Sintel Systems Ltd., 13 Ovadia St., POB 9209, Haifa, Israel 34564, (04) 334944; Telex: 46400 BXHA IL, ext. 8134. Circle 553 on inquiry card.

#### **Business System** Has Three Z80s

The ARCmicro is a smallbusiness microcomputer system with three separate Z80 microprocessors: the system processor, the disk processor, and the terminal processor. The system supports two 514-inch Winchester disks for a total of 20 megabytes of formatted storage and four 514-inch double-sided, double-density floppy-disks totaling 3,2 megabytes of storage. System memory is expandable from 64K bytes to 256K bytes. The terminal processor controls all video-display units, printers, and communications links with the system processor, which frees the system processor from interrupts and increases communications throughput.

Other features of the ARCmicro include a shadow ROM (read-only memory) that contains selfdiagnostics and bootstrap programs that execute during system initialization. The self-diagnostic programs perform memory and peripheral device tests to assure integrity each time the system is initialized. The ROM then "disappears" from the address space and is available for use by the program memory.

The ARCmicro is currently available as a complete microcomputer system called the ARCmicro/PAC. which includes a DEC (Digital Equipment Corporation) VT-101 video display, a DEC LA-34 printer, and either the CP/M 2.2 or the MP/M II disk operating system. Contact ARC Automation Group Inc., POB 1009, Bryan, TX 77805, (713) 693-6122. Circle 554 on inquiry card.

#### SOFTWARE

#### Step FORTH to RPL

RPL is a FORTH-like language that runs on PET and CBM (Commodore Business Machines) computers. RPL (Reverse Polish Language) uses the Commodore BASIC screen editor for program entry and editing, but does not inhibit the use of BASIC throughout a software development session. The RPL Compiler and the screen-oriented, objectlevel Symbolic Debugger reside in the top 8K bytes of memory and can be called directly from BASIC commands. Source code is saved to disk or cassette and is compiled memoryto-memory

RPL has special keywords and symbols that let you nest multiline IF.... THEN. . . ELSE constructs and FOR., NEXT loops, Other special keywords and symbols offer named subroutines and functions of arbitrary length, 16-bit integer arithmetic and logical manipulations, built-in character-string handling. stack-management directives that include n-index and n-rotate, access to machine language, predefined arrays with numeric and string contents, local and global symbols, and forward and backward symbolic references, including GOTO, Also provided are GET, INPUT, and PRINT operators.

The RPL Compiler, including a 60-page user's manual, is available on disk for \$49.95 or on cassette for \$44.95. The complete

Compiler and Symbolic Debugger costs \$80.91 on disk or \$71.91 on cassette; manuals are available for \$10 and \$4, respectively. For details, contact Samurai Software, POB 2902, Pompano Beach, FL 33062, (800) 327-8965, ext. 2; in Florida (305) 782-9985. Circle 555 on inquiry card.

#### Take Your Projects to Task

Task is a management tool to help you schedule a project. It combines the procedures of PERT (Performance, Evaluation, and Review Techniques) and the Critical Path Method, which divides a complex project into assignments and determines which are critical to the overall completion of the project. Task determines the scheduled start and completion dates for each assignment in a project, which tasks cannot be delayed if the project is to be completed on time, and the amount of time each noncritical task can be delayed without affecting the completion date of a project. Among the options included with Task are the ability to create a calendar to work with a particular work schedule, an expanded Gantt diagram, and a management report that can detail each task, including its start and finish times.

Task is a compiled program running under CP/M. It costs \$329 and is available from AMSI, Suite 200, 1935 Cliff Valley Way NE. Atlanta, GA 30329, (404) 634-9535.

Circle 556 on inquiry card.

#### **Overlay Compiler**

An overlay structure is now possible with North Star BASIC under an extension to the Comstar compiler. Overlay structures differ from program chaining in that a root program seqment and selected program variables remain intact when a new program segment is introduced. Overlay structures permit large programs to be executed.

The Overlay extension is suitable for menu-driven programs and includes a Comstar-CP/M capability, The Overlay extension is available to registered owners of the Comstar compiler for \$75 from Allen Ashley, 395 Sierra Madre Villa, Pasadena, CA 91107, (213) 793-5748. Circle 557 on inquiry card.

#### Smartkey for CP/M and Software **Applications**

The Smartkey is a keyboard utility for the CP/M operating system that solves the problem of incompatibility between the console keyboard hardware and applications software. The program acts as an interface between the keyboard and CP/M by allowing the user to "redefine" the keyboard. Codes generated by individual keys can be changed at will or made to generate a sequence of characters at each keystroke. The keyboard's layout can be improved or customized for particular applications software, and sets of key definitions can be saved to

disk for later use. Definitions can be altered at any

Smartkey does not require hardware or software knowledge to install or use. It's available for \$39 from FBN Software, 1111 Sawmill Gulch Rd., Pebble Beach, CA 93953, 14081 373-5303.

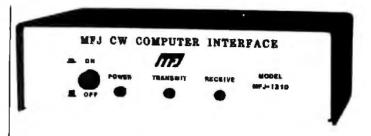

Circle 558 on inquiry card.

#### Mail-List Manager

The One-Disk Mail-List Manager is a mailing-list management and a labelprinting utility for Radio Shack's TRS-80 Models I and III. The program disk can hold 430 records that include name, company, address, and zip code. Records can be sorted alphabetically or by zip code using machine language at a speed of 100 records every 3.5 seconds. Entries are made on a first-namefirst basis, and multiple entries are handled by singlekeystroke repetition of the address. Labels can be printed from sorted or unsorted lists and by any combination of selection fields. Other features include a label-selecting Print Key that can print labels for any geographic area (i.e., city, state, or zip code),

The One-Disk Mail-List Manager requires 32K bytes of memory; conversion to Model III DOS is necessary. It costs \$34.95 and is available from Manhattan Software, POB 1063, Woodland Hills, CA 91365. MasterCard or Visa holders can order by calling (213) 704-8495,

Circle 559 on inquiry card.

#### Continuous Wave Interface for TRS-80

MFJ Enterprises' CW (continuous wave) Transceive Program and Hardware Interface lets you send CW on your keyboard and receive CW on your video-display screen. It features a tri-split screen for received messages, transmit buffer, and programmable message index. Its text buffer can hold 3295 characters when used with a 16K-byte machine, and it can be preloaded while receiving messages. The package has ten 199-character programmable message memones with on-screen message index. Messages can be repeated or combined, and speed is adjustable from 12 to 55 words per minute (wpm). For groupcode practice, up to 2200 characters can be stored. The package automatically receives up to 100 wpm and allows you to store up to five screens of received CW. When the transmit buffer is empty, the mode is automatically changed to receive.

MFJ's hardware interface plugs between the transceiver and the computer without modifications. The cassette-based. disk-compatible program and the hardware-interface package run on a 16K-byte

TRS-80 Model I or III. The Transceiver and Hardware Interface costs \$99.95, plus a \$4 shipping charge, Contact MFJ Enterprises Inc., POB 494, Mississippi State, MS 39762, 16011 323-5869. MasterCard or Visa holders can order by calling (800) 647-1800.

#### Let Your Modem Do the Talking

The automated sales force at Telephone Software Connection delivers its products at any time of the day or night over telephone lines. The Connection's Apple-compatible software comes with complete documentation embedded in the programs. The Connection presently offers telecommunications software, games, and educational programs, as well as utilities for the Apple II. Several free programs are offered by means of the telecommunications hook-

For more information, contact Telephone Software Connection Inc., POB 6548, Torrance, CA 90504, (213) 516-9430. The telephone number for the modern connection is (213) 516-9432. Payment is by credit card.

Circle 561 on inquiry card.

#### Educational **Game Show**

The Game Show is a multiplayer educational game program featuring animated color graphics. It comes with games in vocabulary, history, algebra, sailing, and computer terms. An authoring system that lets you add your own topics is provided.

The Game Show runs on the Apple computer. It costs \$45, which includes documentation, a one-year warranty, and a backup disk. Available at computer dealers or directly from Computer-Advanced Ideas Inc., Suite 341, 1442A Walnut St., Berkeley, CA 94709, [415] 526-9100. Circle 562 on inquiry card.

#### Profile III+

The Profile III + is a database management package for Radio Shack's TRS-80 Model III computer. It can communicate with Personal Software's Visicalc financial-modeling program and with Radio Shack's Superscripsit wordprocessing program. This combination gives the Model III owner a complete management-information

Profile III+ is menudriven with user options appearing at the bottom of the screen, Customized or special limited menus can be created. The system's screen editor lets database designers visually organize an input screen, and fields and user prompts can be moved by means of function keys. Screens can be password-protected. Up to

99 fields per record can be defined, and as many as 64,000 records are allowed. Maximum record size is 1020 characters. Up to 36 fields can be searched or sorted, and wild cards containing partial-field values are permitted.

Profile III+ requires a 48K-byte TRS-80 Model III with a single disk drive. It costs \$300, which includes manufacturer-supplied updates. Contact The Small Computer Company Inc., 40 West Ridgewood Ave., Ridgewood, NJ 07450, 12011 445-5643.

Circle 563 on Inquiry card.

#### Integrate Real-Time Software Tasks

The Multi-Tasking Kernel is a tool for integrating multiple real-time software tasks in 8085-, Z80-, 6502-, 6800-, and 6809-based microcomputer products. The package includes source code for a basic multitasking organization in which tasks self-schedule in a round-robin fashion. The package provides the user with guides through a series of enhancements for carrying out sophisticated, interruptinitiated, preemptive priority dynamic-task scheduling. Also included are descriptions of dedicated and shared resource scheduling, time-slice scheduling, and intertask communication schemes.

The Multi-Tasking Kemel costs \$195, which includes assembly-language sourcecode implementations for the 8085, Z80, 6502, 6800, and 6809 microprocessors. Contact US Software, 5470 Northwest innisbrook Pl., Portland, OR 97229, (503) 645-5043. Circle 564 on inquiry card.

#### BASIC Editor for TRS-80s

EDIT is a full-screen BASIC editor for Radio Shack's TRS-80 Models I and III. It features a floatingpoint cursor with automatic repeat functions and a Scripsit-like control structure for easy handling. More than 30 commands permit professional-quality editing of BASIC text at the character, word, line, or block level.

EDIT was developed in England by Southern Software. It costs \$40 and is being distributed in the U.S. by Allen Gelder Software. POB 11721. Main Post Office, San Francisco, CA 94101.

Circle 565 on inquiry card.

#### Insurance Rating Programs

Orion Business Systems' Orionrater programs could make the insurance agent's rating book a piece of the past. This series of property and casualty rating programs can quickly compare and print out quotes. They are simple to operate and do not require insurance or technical backgrounds. Among the programs available are Auto insurance, Homeowners/Condo Owners and Renters insurance, Commercial Truck insurance, and Commercial Liability insurance.

Most Orionrater programs run on 48K-byte Apple II Plus computers equipped with a disk drive and controller, a monitor, and a printer. Prices range from \$475 to \$750. For complete specifications. contact Orion Business Systerns, Suite 102, 11777 Bernardo Plaza Court, San Diego, CA 92128, (714) 485-8580.

Circle 568 on inquiry card.

#### C/80 Compiler

C/80 is a compiler for the C programming language that provides random-access file I/O (input/output) and Macro-80 compatibility. It generates 8080 assembly-language code for the assembler or for Microsoft's Macro-80 relocatable assembler and linking loader. All Clanquage control statements and anthmetic and logical operators are supported as well as character and 16-bit integer data, pointers, arrays, strings, data initialization. inline assembly language, conditional compilation, and most preprocessor functions. C/80's run-time library provides standard C I/O functions and features dynamic storage allocation, I/O redirection, and a run-time execution-profile facility for easy program optimization.

C/80 lacks structures, pointers to pointers, and long and floating data types. Available on 8-inch CP/M disks and on 514-Inch Heath/Zenith CP/M or HDOS disks, C/80 costs \$39.95. Contact The Software Toolworks.

14478 Giorietta Dr., Sherman Oaks, CA 91423, (213) 986-4885.

Circle 569 on inquiry card.

#### **Atari Graphics** Composer

The Graphics Composer is a joystick/paddle graphics software package for Atari 400/800 microcomputers. With it you can draw the outline of a picture in highresolution screen mode 8 or 7 using a joystick or paddle; then you can use color fill-in, color brushes, and text to complete your graphics scheme. The graphics can then be saved to disk or cassette.

Graphics Composer Is supplied with a Geometric Figures program that allows you to define circles. triangles, polygons, parallelograms, and trigonometric curves. Graphics Composer is available in both cassette and disk versions for \$39.95. It requires 32K bytes of programmable memory. Contact Versa Computing Inc., Suite 104, 3541 Old Conejo Rd., Newbury Park, CA 91320, (805) 498-1956.

Circle 570 on inquiry card.

#### New C Compiler

Phase One Systems has unveiled a C compiler for its Oasis operating system. Oasis C supports most Unix Version Seven C features, it produces Z80 assembler code and is provided with an optimizer that reduces compiled code between 30 and 50%. Among the attributes of Oasis C are pointers, structures, assignment operators, a full I/O (input/output) library, and compile options. A version of Oasis C for the 16-bitcompatible Oasis-16 will be available.

Oasis C costs \$250. For complete details, contact Phase One Systems Inc., Suite 830, 7700 Edgewater Dr., Oakland, CA 94621, (415) 562-8085.

Circle 571 on inquiry card.

#### PERIPHERALS

#### Model III Cash-Register Expansion System

The CR-180 is a cash register/point-of-sale expansion system for the TRS-80 Model III microcomputer. It stores transactions for up to 100 employees, saves eight methods of payments, and provides inventory control and complete reporting. The CR-180 can produce daily sales and cash reports by employee and by type of transaction, inventory usage reports, and gross profit computation. Also, price and shelf labels can be printed.

The CR-180 expansion system is supplied with an electronic cash drawer and a receipt printer which plug directly into the TRS-80 Model III. Audio has been added for keystroke confirmation. Prices range from \$900 to \$1900. Contact Integrated Cash Register/Futuresoft, Southern Region, Suite 203, 2301 Park Ave., POB 1446. Orange Park, FL 32073, (904) 269-1918.

Circle 572 on inquiry card.

#### Draft- and Letter-Quality Printer

Printer Systems' Model 1800 printer can produce both correspondence- and draft-quality printouts. It is plug-compatible with IBM Series 1 or System 34/38 computers as well as Univac, Burroughs, Honeywell, DEC (Digital Equipment Corp.), and Data General computers, in the draft mode, the Model 1800 prints at 200 cps (characters per second) with a 7 by 9 dot-matrix format, In the correspondence mode, it prints at 50 cps in a 40 by 18 format. The Model 1800 features a forms-length selector switch and quiet operation.

The Model 1800 printer is available for \$2695 from Printer Systems Corp., Suite 104, I West Deer Park Rd., Gaithersburg, MD 20760, (301) 840-1070.

Circle 573 on inquiry card.

#### I/O Control Card

The G519I/O card is an interface between the Multibus and Gordos industry-standard PB-16/PB-24 I/O (input/output) module boards. The card can control up to 72 AC or DC input or output modules in any combination or position on the I/O module board. It can also serve as a general-purpose TTL (transistor-transistor logic) interface card for control of up to 72 bidirectional I/O lines.

Gordos International also has interface cards for the RM-65, the Exorcisor II. and STD bus. The G519 I/O card is priced at \$500. For details, contact Gordos Corp., 250 Glenwood Ave., POB 100, Bloomfield. NJ 07003, (201) 743-6800. Circle 574 on inquiry card.

#### Analog Peripheral

The Analog Peripheral is a self-contained 8-bit A/D lanalog-to-digital) converter that can connect to any computer. It has a switch-selectable RS-232C output line with data transmission rates from 110 to 9600 bps (bits per second). Other features include a 26-pin parallel output, four input channels, conversion speeds of 100 microseconds, power supply, and plug-in sensors for temperature, light and other analog signals. For complete details on the Analog Peripheral, contact Cambridge Development Laboratory, 36 Pleasant St., Watertown, MA 02172, (617) 926-0869.

Circle 575 on inquiry card.

#### **Genlus Display System**

The Genius is an Applecompatible, full-page video-display terminal. The 15-inch Genius displays 57 lines of text by 80 characters, or optionally 66 lines by 80 characters. The Genius is compatible with the Wordstar word-processing system and many CP/M-based programs. Large sections of code can be displayed at one time, which is a plus for software developers, and the highresolution display has an 87 MHz bandwidth and 6K bytes of high-speed buffer memory.

The Genius is supplied with an Apple interface card. It is available for \$1795 from Micro Display Systems Inc., 514 Vermillion St., Hastings, MN 55033, (612) 437-2233. Circle 576 on inquiry card.

#### Single-Pen Drum Plotter

The Complot CPS-20 is a single-pen. 11-inch drum plotter that can interface with most computers. The only alteration needed to use the CPS-20 with different computers is the switching of a single interface card. The high-effi-

ciency CPS-20 operates at 3 inches per second at a resolution of 0.005 inch. It costs \$3995. Contact Houston Instrument, One Houston Square, Austin, TX 78753, (512) 837-2820. Circle 577 on inquiry card.

#### Line Controller Adds **Voice Synthesis**

The SLC-II is a serial line controller that combines microprocessor intelligence with a versatile voice-synthesis capability. The controller can automatically dial telephone lines and talk by means of its electronically synthesized voice. It can listen and respond to incoming messages that originate at a remote terminal or are generated by a telephone keypad. The SLC-li's vocabulary includes more than 300 words as well as the complete alphabet and numerals, and it will spell any word it cannot say.

The SLC-II provides ASCII input/output, Touch-Tone input, printer output, external amplifier output, and synthesized voice output. A built-in power backup is provided by rechargeable batteries. In addition, the SLC-II features an autodial/auto-answer modem; 16K, 32K, or 80K bytes of programmable memory; and automatic time and date entry with day, month, and year. Applications include data collection and transmission, telephone access to large databases, alarm signaling, and security or facility monitoring. Connections to existing computer systems are made by standard RS-232C or 20 mA serial-loop interface.

In single-unit quantity, the SLC-II costs \$1975. Contact Digital Pathways Inc., 1260 L'Avenida, Mountain View, CA 94043, (415) 969-7600. Circle 578 on inquiry card.

#### **Dot-Matrix Printer**

NEC Home Electronics' PC-8023A dot-matrix printer can bidirectionally print the upper- and lowercase ASCII (American Standard Code for Information Interchange) character set featured on the PC-8001A microcomputer. In addition, the printer provides many Greek, mathematical, and graphics symbols. The high-speed PC-8023A is equipped with a standard parallel interface and features the ability to print dot-graphics screens on paper. Up to three copies of fanfold, roll, or cut-sheet paper and originals are possible using either pin- or friction-feed delivery. Paper widths range from 11.5 to 25 cm (41/2 to 10 inches).

The PC-8023A's matrix options include 7 by 9 English or 8 by 8 graphic and dot graphic, ranging from 40 columns by 4 characters per inch to 136 columns by 17 characters per inch. Print speed is 100 cps (characters per second), and all fonts fea-

ture fixed- or proportionalspacing format options at 6 or 8 lines per inch, plus \( \frac{44}{-10} \) incremental line feed.

The PC-8023A printer costs \$795. Contact NEC Home Electronics USA, Personal Computer Division, 1401 Estes Ave., Elk Grove Village, IL 60007, (312) 228-5900.

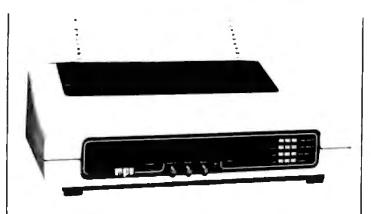

Circle 579 on inquiry card.

#### Apple II ROM Board

The Andromeda ROM (read-only memory) Board lets you plug utility programs into your Apple II and access them without loading from disk. The Board has space for 2K- or 4K-byte PROMs (programmable read-only memories) and it can accommodate 2K-byte programmable memory devices. (This gives you read/write capabilities for developing custom PROM programs.) Two 2732 PROMs allow a total of 8K bytes of memory on the ROM Board.

The ROM Board is supplied with a utility ROM that gives you five options with your Applesoft programs: you can perform automatic line numbering, alphabetize a disk catalog, control a program list with a page mode, restore crashed Applesoft programs in memory, and create a disk without using the disk operating system. The ROM Board with utility ROM costs \$125 and is distributed by Computer Data Services, POB 696, Amherst, NH 03031, (603) 673-7375.

Circle 580 on inquiry card.

#### Heavy-Duty Printer

The Model MP150 matrix printer has a heavyduty print head, rated for continuous duty, with an expected life in excess of 100 million characters. Characters are formed bidirectionally in a logicseeking mode to optimize system throughput. Nine print wires provide clear characters with true descenders and underscores. The MP150 can print 136 characters per line at 10 characters per inch, or up to 226 columns can be printed by selecting the 12or 16.7-character-per-inch density. Double-width characters are softwareselectable. A 7 by 9 matrix font is used for high-speed data printing and an 11 by 9 serif-style matrix font can be used for high-quality printouts. The MP150 features the standard 96-character ASCII (American Standard Code for Information Interchange) set with four strap-selectable foreign fonts.

The MP150 is capable of high-resolution dot-addressable graphics for plotting, printing of screen graphics, and drawing of illustrations. Forms handling

is carried out by a steppermotor-drive tractor paper feed that can be adjusted to accept forms from 7.5 to 38 centimeters (3 to 15 inches) in width Eight user-selectable forms lengths, skip-over-perforation, and six userselectable character densibes are featured.

The MP150's 1K-byte buffer is expandable to 8K bytes, and its Centronicstype interface can accept parallel TTL (transistor-transistor logic) level data at over 1000 characters per second, Optionally, an RS-232C serial interface can be added to the MP150. The RS-232C interface can accept data at any one of seven rates up to 9600 bps (bits per second) and it supports X-ON/X-OFF and ETX/STX protocols. Another option is an IEEE-to-Centronics Interface adapter card for connecting devices with an IEEE-488-bus output port.

The Model MP150 printer costs \$1095. Contact MPI, 4426 South Century Dr., Salt Lake City, UT 84107, [801] 263-3081. Circle 581 on inquiry card.

#### Universal Systems Interface

The Shugart Associates Systems Interface (SASI) is a universal interface that allows streaming-tape cartridge and floppy- and Winchester-disk drives to use a standard system interface. SASI eliminates having to develop new controllers, host adapters, and software drivers each time a new memory device is integrated into a system. Other SASI operating features include the ability to attach up to eight host processors and controllers per SASI bus, a search capability to assist file-management systems in locating key parameters, multiple command types, and selfarbitration for control of the SASI bus on a memorydevice-priority basis.

SASI is already available on Shugart's SA1400 Series of disk-drive controllers.

In OEM (original equipment manufacturer) quantities, the price for Shugart's SA1400 series of disk-drive controllers with an SASI interface begins at \$565. For complete details, contact Shugart Associates, 475 Oakmead Parkway, Sunnyvale, CA 94086, (408) 733-0100.

Circle 582 on inquiry card.

#### Scorplo Family

The Scorpio family of 8-inch Winchester disk drives from Ampex have an average access time of 30 milliseconds with a data-transfer rate of 1.2 megabytes and an average latency of 8.3 milliseconds. This is achieved by means

of a linear voice-coil actuator in a closed-loop servo system. All critical components are enclosed in a sealed module to assure long-term reliability and data integrity. Additional features ensuring data integrity include head-landing zones, module shock mounting, and self-actuating head-carriage and diskspindle locks. Mean time between failures is 10,000 hours.

The Scorpio family is available in two versions: Model 48 with 49.7 megabytes of storage and the Model 80 with 82.9 megabytes of unformatted storage capacity and 20,160 bytes per track over 823 cylinders. The Model 80 is interface-compatible and software-transparent to any host system using industry-standard 80megabyte disk drives, such as the Ampex DM-980.

For further details on the Scorpio family, contact Ampex Corporation, Memory Products Division, 200 North Nash St., El Segundo, CA 90245, (213) 640-0150.

handling, and energy management encompassing load scheduling, demand limiting, duty cycling, optimum start-up, and so on, based on analog input. For complete details, contact National Energy Corp., 1795 Williston Rd., South Burlington, VT (800) 451-3410; In Vermont (802) 658-6445.

Circle 584 on inquiry card.

**NEC Home Electronics'** color word-processing system features a self-teaching program and a 12,000word dictionary. The system is menu-driven, which reduces the possibility for errors, and features allgreen text, instructions in yellow or blue, and violethighlighted potential deletions. The system provides automatic page numbering, draft printing without leaving the document. stock-paragraph and formletter appending to any document, automatic diskoverflow routine, useroriented document name listing, unlimited headers and footers, disk-supply indicator, single-key commands, and block move. copy, delete, write, print, and justification capabilities.

When combined with NEC's PC-8001A microcomputer, color monitor, printer, I/O (input/output) unit, and a disk drive, the color word-processing system adds the final touch to a complete computer system that costs less than \$6000. Contact NEC Home Electronics USA. Personal Computer Div., 1401 Estes Ave., Elk Grove Village, IL 60007, (312) 228-5900, for complete details.

Circle 585 on inquiry card.

#### Portable Terminal Has Modem and Printer

Business people will find the Lex-21 portable printing and communications terminal useful in providing access to remote computing services, in field service. for inventory checks, accounting systems, electronic mail, and up-to-theminute price quotations. Lex-21 features a 59-key ASCII (American Standard Code for Information Interchange) keyboard and a 40-column thermal printer with upper- and lowercase descenders and a 5 by 7 dot-matrix character format, it has a built-in fullduplex 300 bps (bits per second) modem with originate or answer modes, Bell 103A compatibility. and an FCC-approved handset connection, its industry-compatible asynchronous communications protocol allows transmission at 10 or 30 characters. Its battery-backed memory includes a 1K-byte receive buffer and 2K bytes of compose and edit memory

The Lex-21 costs \$1195. For details, contact Lexicon Corporation, 1541 Northwest 65th Ave., Fort Lauderdale, FL 33313, (305) 792-4400.

#### Wireless **Building Automation**

The Telebrain RS-232C is a wireless computer interface that can communicate programmed, automatedswitching decisions throughout an entire facility using the existing AC wiring, it can transmit switching decisions emanating from a host computer, per software developed by the facility, to any one of 1600 independentcontrol points, or Teleswitches. The Teleswitch recieves and identifies the command and performs the necessary switching.

Telebrain incorporates National Energy's Solution 100 and Solution 1600 programs and the Telegain amplifier. The Solution 100 software includes independent programmable control of up to 83 unique points allowing for 7-day programming, daily startup, shut-down, and duty cycling. Telebrain can interface with any computer that has an RS-232C serial output port.

Applications include facility management and automation including lighting control, activation of security systems, materials

Circle 586 on inquiry card.

#### Video Selector

The Archer Video Selector is a compact, push-button video-switching and control center designed to eliminate the need to repeatedly change cable connections. It simplifies signal routing even for complex home video systems. Two banks of push buttons provide the necessary switching and signal routing between four 75-ohm coaxial inputs and one phono jack to three 75-ohm coaxial outputs. The inputs permit the connection of any combination of five video sources. such as cable television, an

antenna, a videocassette or videodisc player, a camera, and a small computer. The three outputs allow simultaneous viewing and recording of a selected input

The Archer Video Selector offers a signal-path bandwidth from 50 to 900 MHz. No power is reguired. The Archer Video Selector costs \$79,95 and is available at Radio Shack stores and participating dealers. Contact Radio Shack, 1800 One Tandy Center, Fort Worth, TX 76102, (817) 390-3300. Circle 587 on inquiry card.

#### ROM Simulator

Lamar Instruments' ROM (read-only memory) simulator is designed to reside in an Apple II-based development system for use in developing software for another, "target" computer. The device can take the place of a ROM, PROM (programmable ROM), or EPROM (erasable programmable ROM) normally located in the target computer and is useful for developing software eventually destined to be placed in ROM. The ROM simulator connects to the target computer by means of a 24-pin dual-inline package

(DIP) and a ribbon cable

The double-sided ROM simulator has platedthrough holes, silkscreened legends, goldplated contact fingers, and is solder-masked. It has 2K bytes of high-speed, lowpower, CMOS (complementary metal-oxide semiconductor) static programmable memory that resides in hexadecimal C800 to CFFF in the Apple II memory map, it contains the necessary logic to automatically switch control of the address and data bus from the Apple II to Lamar Instruments' Superkim (i.e., target) ROM sockets. The price is \$295 Contact Lamar Instruments, 2107 Artesia Blvd., Redondo Beach, CA 90278, [213] 374-1673.

Circle 588 on inquiry card.

#### Options Package for DS180 Printer

Datasouth Computer's special package of options for its D\$180 matrix printer includes graphics, compressed print, display mode, an expanded buffer, and a dot-addressable raster-scan feature that lets you print computer-generated charts and graphics. Under program control, six print wires can be addressed to print high-density output at a resolution of 75 by 72 dots per inch.

In the compressed print mode, the package permits manual or program selection of print sizes including 10, 12, and 16.5 characters per inch as well as expanded modes of 5, 6, and 8.25 characters per inch. This permits the DS180 to print from 132 columns on an 81/2-inch form to 217 columns on a 14%-inch form.

The display mode lets you print out or "display" the nonprinting ASCII (American Standard Code for Information Interchange) control codes.

The package of options costs \$150. The DS180 printer, which operates at 180 characters per second. costs \$595. Contact Datasouth Computer Corp., 4740-A Dwight Evans Rd.. Charlotte, NC 28210, (704) 523-8500.

Circle 589 on Inquiry card.

#### MISCELLANEOUS

#### Wire-Wrap Tool

The Model OK-729 pneumatic wire-wrapping tools feature precision steel drive components enclosed in a Lexan-reinforced case. A positive indexing mechanism with adjustable stop location and a 6-foot (2-meter) flexible air hose are provided. The OK-729 is available in two versions: a 5000 RPM (revolutions per minute) version and a model with a higher torque and a speed of 3000 RPMs for cut/strip/ wrap applications. Both versions are designed to operate at 80 to 100 pounds per square inch and are fully rated for heavy-duty applications on wire as large as 18 AWG (American Wire Guage) or for more delicate work on wire as small as 30-32 AWG.

The OK-729 wire-wrap tool is available for \$188.57. Contact OK Machine and Tool Corp., 3455 Conner St., Bronx, NY 10475, (212) 994-6600. Circle 590 on inquiry card.

#### New EEPROM

The ER5716 EEPROM felectrically erasable programmable read-only memory) is the newest member of General Instrument Microelectronics' line

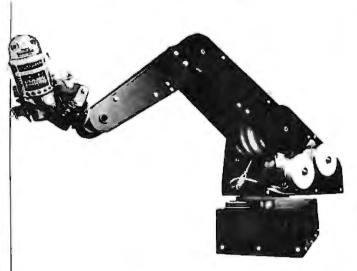

of electrically alterable nonvolatile memories. It's based on N- (negative-) channel silicon-gate MNOS (metal-nitride-oxide semiconductor) technology and is designed for applications that require a large [16K-bit] memory, such as microprocessorprogram storage, where nonvolatility is essential but occasional data changes must be made. The ER5716 features improved access time and infinite read capabilities. It is bulk-erasable and can be electrically reprogrammed.

The ER5716 EEPROM is available in single units at General Instrument dealers. In OEM (original equipment manufacturer) quantities, it costs \$35.70. Contact General Instrument Corp., Microelectronics Div., 600 West John St., Hicksville, NY 11802. (516) 733-3107, for additional information. Circle 591 on inquiry card.

#### Cope with Scopes

The XYZs of Using a Scope will not only show you how an oscilloscope works, but how to make one work for you. Divided into two sections, the primer first covers the nuts and bolts and oscilloscope control functions, then expands to demonstrate waveforms, waveshapes, and measurement techniques.

The XYZs of Using a Scope is available free from Tektronix Inc., POB 4828, Portland, OR 97208, (800) 547-6711; in Oregon (800) 452-6773. Circle 592 on Inquiry card.

#### Robotics Arm for Education and Hobby

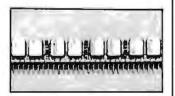

Coine Robotics of England recently introduced the Armdroid I. an educational and hobbyist manipulating arm. The arm has five axes of rotation (base, shoulder, elbow, wrist up and down, and wrist rotate), a three-finger gripper, and is completely stepper-motor-driven. The Armdroid I will operate with any microcomputer, requiring only a latched 8-bit parallel port to interface. The arm has a 17inch reach, can lift 10 ourices, has a gripping force of 5 pounds and a resolution of 0.15 inch.

Colne Robotics intends to produce a newsletter for owners of the arm, as well as introduce new products to enhance the arm, such as tactile sensors for closed-loop operations. The Armdroid I can be easily modified to accept experimental devices such as alternate gripper devices, tactile sensors, micro switches, and potentiometers.

The Armdroid I is avail-

able in kit form for \$595 and includes Z80 machinelanguage driver software for the TRS-80 Model I and the power/interface board kit. An assembled version is also available for \$695. For further information, contact Coine Robotics Inc., 207 Northeast 33rd St., Ft. Lauderdale, FL 33334 or Colne Robotics Co. Ltd., 1 Station Rd., Twickenham, Middlesex TW1 4LL, England, 1-892-7044; Telex: 8814066 GCIC.

Circle 593 on inquiry card.

#### High-Density Memory Requires Less Space

Electronic Designs' EDH-4816 is a 128K-byte high-density memory that requires only one fifth the area of an equivalent DIP (dual inline package). The EDH-4816 consists of eight

industry-standard 16K by 1-bit random-access read/ write memories in carriers mounted on a 32-pin SIP (single inline package). The EDH-4816 has all standard operating modes. Access time is 200 ns (nanoseconds); cycle time is 375 ns.

In single-unit quantities, the EDH-4816 costs \$68. In 100-unit quantities, the price is \$59. Contact Electronic Designs Inc., 230 Eliot St., Ashland, MA 01721. (617) 881-5244. Circle 594 on inquiry card.

#### TRS-80 Network

Radio Shack will use ARCNET to provide a lowcost, high-speed local network for the TRS-80 Model Il microcomputer. ARCNET is the local network component of Datapoint's ARC (Attached Resource Computer) system. ARCNET provides an inexpensive. efficient means to link a large number of computers together. Each computer in the ARCNET can access common databases, such as accounting, word-processing information or electronic filing systems, and share peripherals (printers, for example throughout the network. In addition to Datapoint's new LSI integrated-circuit network interface, Radio Shack will use ARCNET protocols and software for cost-effective. high-speed common-resource networking. The ARCNET will permit as many as 255 Model Ils and their peripherals to be interconnected.

Datapoint processors and peripherals, such as its

## Why use their flexible discs:

Athana, BASF, Control Data, Dysan, IBM, Maxell, Nashua, Scotch, Shugart, Syncom, 3M, Verbatim or Wabash

when you could be using

for as low as \$1.94 each?

Find the flexible disc you're now using on our cross reference list... then write down the equivalent Memorex part number you should be ordering.

#### Memorex Flexible Discs...The Ultimate in Memory Excellence

ex means quality products that you can depend on Memorex means quality products that you can depend on. Quality control at Memorex means starting with the best materials available. Continual surveillance Inroughout the entire manufacturing process. The benefit of Memorer's years of expenence in magnetic media production, resulting, for matanca, in proprietary coating formutations. The most sophis-ticated testing procedures you'll find anywhere in the business.

100 Percent Error Free Each and svery Memorax Flaxible Disc is certified to be 100 percent error free. Each hrack of each (fexible disc is tested, individually, to Memorax's stringent standards of excellence. They test signal amplitude, resolution, low-peas modulation, evenerate, missing pulge error and extra paids error. They are formally stated on of moderate and formally stated on of moderate available. ovenerate, missing pulse error and extra passe error. They are forque-leasted, and compelitively tested on drive's available from almost every major drive manufacturer in the industry including drives that Memorex manufacturers. Rigid quality audits are built into every step of the manufacturing process and stringent testing result in a standard of excellence that assures you, our customer, of a quality product designed for increased data reliability and consistent top performance.

Increased data reliability and consistent top performance. Customan-Oriented Packaging Memorad's commitment to excellence does not stop with a quality product. They are proud of their flexible disce and they package them with pride. Both their packaging and their labeling have been designed with your ease of identification and use in mind. The deskrop box constaining ten discs convenient for filing and storage. Both box tabels and packet tables provide full information on compatibility, deneity, sectoring, and record length. Envelopes with multi-language care and handling instructions and color-coded removable labels are included. A write-protect feature is available to provide data security.

Full One Year Warranty — Your Assurance of Quality Mamorex Flexible Discs will be replaced by Memorex if they are lound to the defactlys in materials or workmanship within one year of the date of purchase. Other than replacement, Memorex will not be responsible for any damages or losses (including consequential damages) caused by the use of Mamorex Elevitible fluces.

Quantity Discounts Available
Memora: Flexible Discs are packed 10 discs to a carton and
10 cartons to a case. Please order only in increments of 100
units for quantity 100 pricing. We are also within to accommodate your smaller orders. Quantities less than 100 units are
available in increments of 10 units at a 10% surcharge

854 Phoenix 🗆 Box 1002 🗆 Ann Arbor, Michigan 48108 U.S.A. Cell TOLL: FREE (800) 521-4414 or outside U.S.A. (313) 994-4444

137-megabyte disk memory and 900-line-per-minute printers, will be compatible with the TRS-80 ARCNET. Also, Radio Shack's bisynchronous communications software packages for the Model II will permit certain IBM and DEC (Digital Equipment Corporation) and other mainframe equipment to link with ARCNET.

Each computer in the TRS-80 ARCNET requires an interface card that installs in an existing card slot on the TRS-80 Model II. The card will be made by Texas Peripherals and will sell for approximately \$400. Other required components are a coaxial cable and a junction box. For further information, contact Tandy Corporation, 1800 One Tandy Center, Fort Worth, TX 76102, (817) 390-3300. Circle 595 on inquiry card.

# Formatted Languages for the VT180

Digital Research has made available formatted language packages for DEC's (Digital Equipment Corporation's) CP/M-based VT180 microcomputer, Among the packages being offered are CBASIC. CB80, and PL/I-80, CBASIC is a compiler-interpreter dialect of BASIC. CB80 is a fast-executing compiler version of CBASIC that provides full support for MP/M. PL/1-80 is an implementation of subset G of the PL/I programming language. These products are available at Digital Research dealers or directly from Digital Research, 130 Central Ave., Pacific Grove, CA 93950, [408] 649-3896. Circle 596 on Inquiry card.

#### Planning Guide for Educators

A Planning Guide to Successful Computer Instruction is an aid for planning and evaluating the use of computers in the classroom. Written for teachers and administrators, the quide suggests criteria for assessing available computer and microcomputer hardware and software for instructional purposes. Among the topics covered are computer instruction site development and management and sources of hardware and software for education use.

A Planning Guide to Successful Computer Instruction costs \$19.95. Contact Electronic Courseware Systems, POB 2374, Station A, Champaign, IL 61820, (217) 359-7099. Circle 597 on inquiry card.

## Educational Software Catalog

Aquarius Publishers is a new company that publishes and distributes educational software oriented toward junior and senior high-school students. Most of the programs run on TRS-80 and Apple II microcomputers. For a free catalog, contact Aquarius Publishers, POB 128, Indian Rocks Beach, FL 33535, (813) 595-7890. Circle 598 on Inquiry card.

#### Compatibility Guide

Nashua Corporation's new pocket-sized Compatibility Guide contains a complete list of all disk drives in use and the Nashua Corporation disk products developed for each. The guide provides a description of the disk pack and cartridge charac-

teristics, a comparison table, and an illustration of a disk layout.

The Compatibility Guide is available from Nashua Corporation. Computer Products Division, 44 Franklin St., Nashua, NH 03061. 
Circle 600 on inquiry card.

#### Trade-A-Computer

Trade-A-Computer is a monthly classified magazine dedicated to selling, buying, and trading new and used computer products. Trade-A-Computer has an online data-entry service called Ad-Line, a 300-bit-per-second software system that asks a series of questions concerning your ad, then composes the ad after completing its inquiry. There are no additional charges for this service.

Classified ads cost \$1 per line; display ad rates are available. Ad-Line can be accessed by calling (215) 462-4415. Subscriptions cost \$10 per year. Contact Trade-A-Computer, POB 15842, Philadelphia, PA 19103, (215) 462-4416.

Circle 599 on inquiry card.

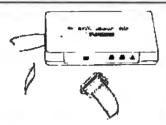

#### Where Do New Products Items Come From?

The information printed in the new products pages of BYTE is obtained from "new product" or "press release" copy sent by the promoters of new products. If in our judgment the information might be of interest to the personal computing experimenters and homebrewers who read BYTE, we print it in some form. We openly solicit releases and photos from manufacturers and suppliers to this marketplace. The information is printed more or less as a first-in first-out queue, subject to occasional priority modifications. While we would not knowingly print untrue or inaccurate data, or data from unreliable companies, our capacity to evaluate the products and companies appearing in the "What's New?" feature is necessarily limited. We therefore cannot be responsible for product quality or company performance.

You can profitably reload \$96 Richos for \$36 \$90 Diablos for \$24 \$84 Wangs for \$24 \$76 NECs for \$24 \$36 Qumes for \$12 or less

This comprehensive book provides full instructions on how to make as much as \$180 an hour reloading mulli-strike ribbons in your home Send S.A.S.E. to

WILLIAM WALKER

Box 16-J-B 164-30 Hillside Ave Jamaica, NY 11432

We sell and reload multi-strike ribbons.

Get twice as much from your H88 or H89 microcomputer. Our FDC-880H floppy disk controller, in conjunction with your 5%" drives, for example, expands memory capacity from 256 bytes to 512 bytes per sector.

And it handles single and doublesided, single and double-density, 8" and 5¼" drives — simultaneously.

Call 714/275-1272 today or write for details.

## JE215 Adjustable Dual Power Supply

General Description: The JE215 is a Duel Power Supply with independent adjustable positive and negative output voltages. A separate adjustment for each of the supplies provides the user unlimited applications for IC current voltage requirements. The supply can also be used as a general all-purpose variable power supply. FEATURES!

FEATURES:

Adjustable regulated power supplies, pos. and neg. 1 2VDC to 15VDC.

Power Output (each supply)

5VDC © 500mA, 10VDC © 750mA, 12VDC © 500mA, and 15VDC © 175mA.

Two, 3-terminal edj. 1C regulators with thermal overload protection.

Hest sink regulator cooling.

LED "on" indicator.

Printed Board Construction.

Printed Soard Construction

• 120VAC Input • Size: 3-1/2"w e 5-1/16"L # 2"H

#### DTE-AK (Case for JE610)................. 52.95 Sun Power Your Electronics! SOLAR CELL PANEL KIT

DTE-11 (Pictured) ....... 34.96 

DTE-8 (Pictured).

38 96

- Over 11 square inches of active celf
- . Voltage line tap @ 0.5V increments
- Provision for charging batteries.

• Overall panel size: 4%"L x 4%"H x %"D

The JE305 Solar Cell Panel Kit contains 20 ea. solar cells. On the panel board are power line taps which allow the user to select voltages (1 voltage at a time) from 0.5VDC to 10VDC. The applications of each panel can be further aspanded by coupling additional panels in series for more voltage or in parallel for more current. The premium grade solar cells provide the current necessary for the operation of most portable transistor radios, small battery powered cassetts tape players 4 unlimited a voordments solar projects.

#### RCA Cosmac 1802 Super Elf Computer \$106.95

The Super Elf is a small single board computer that their many big things. It's an excellent computer for training and for learning programming with its machine language and yet it's easily expended with additional memory. Full Basto, ASCII Reyhoards, video character generation, etc.

ROM monitor: State and Mode displays; Single step. Optional address displays; Power Supply, Audio Amplifler and Speaker; Fully socketed for all

The Super Ell includes a ROM monitor for pr The Super Ell Includes a RDM manklot for pro-gram loading, editing and execution with SMGLE STEP for program debugging which is not in-cluded in others at the same price With SMGLE STEP you can see the microprocessor chip oper-ating with the unique Quest address and data bus displays before, during and after executing in-structions. Also, CPU mode and instruction cycle are decoded and displayed on 8 LED indicators.

AR RCA 1881 videa graphics chip allows you to connect to your own TV with an insepressive video modulator to do graphics and games. There is a speaker system included for writing your own music or using many music programs already written The speaker amplifler may also be used to drive relays for control numbers

A 24 key HEX teryboard includes 16 HEX keys plus A 24 key HEA Reposite Includes to HEA Heys plac-load, reset, run, wah, Input, memory protect, member select and single step. Large, on board displays provide output and optional high and law address. There is a 44 pin standard connector slot A new enhanced version of Super Basic new available. Quest was the first company worldwide to stip a full size Basic for 1802 Systems A complete function Super Basic by Ron Canter including floating point capability with scientific notation (number range = 17E\*), 32 bit integer

Quest Super Basic V5.0

.2 billion: multi dim arrays, strong arrays, string nipulation, cassette I/O, save and load, basi data and martine language programs, and over 75 statements, functions and operations

New improved laster version including re-number and essentially unlimited variables. Also, an exclusive user expandable command. Senal and Parallel I/O routings included

Super Basic on Casastia \$35.00.

for PC cards and a 50 pin connector slot for the Quest Super Expansion Board. Power supply and societis for all 10's are included plus a detailed 127 pg. instruction manual which now includes over 40 pgs. of software info. including a series of besons to help get you started and a music pro-gram and graphics target game. Many achools and universities are using the Super Elf as a course of study OEM's use it for training and

Remember, other computers only offer Super Elf heatures at additional cost or not at all Compare before you buy. Super Elf KR \$106.95, High address option \$8.95, Low address option \$9.95. Custom Cabinet with cined and labelled plaxiglass front panel \$24.95. All metal Expansion Cabinet, painted and salk screened, with room for 55-100 boards and power supply \$57.00. NiGed Baltery Memory Sever Kit \$6.95. All kits and options also completely assembled and tested

Onuntiate, a software publication for 1802 computer users is available by subscription for \$12.00 per 12 essues. Single issues \$1.50, issues 1-12 bound \$16.50

Moews Video Graphics \$3.50, Games and Music \$3.00, Chip 5 Interpreter \$6.59, Starship 4K cas-sette \$14.95. Exciting and challenging space game. Complete manual included.

Free 14 page brochure of complete Super Elf system.

#### Super Expansion Board with Cassette Interface \$89.95

This is truly an astounding value! This board has ting is truly an astounoung value! This open reas-bert designed to allow you to decide how you want it optoned. The Super Expansion Board somes with 4K of low power RAM fully address-able anywhere at 64K with budt-in memory pra-loct and a cassettle interface. Provisions have been made for all other chilipset on the some hoard. heen made for all other options on the same board peen made for an orner opports on the same board and it fits neatly into the hardwood cabinet atengate the Super Eff. The board includes slots for up to 6K of EPROM (2708, 2758, 2716 or TI 2716) and is hully socketed. EPROM can be used for the monitor and Tiny Basic or other purposes

A 1K Super ROM Monitor \$19.95 is available as an on board option in 2708 EPROM which has been preprogrammed with a program loader/editor and error checking multi file cassette read/write software. (relocatable cassette file) another neclusive from Ocest it includes register save and readout, block move capability and video graphics dover with blinking cursor. Break points can be used with the register save feature to isolate pro-

gram bugs quickly, then follow with single step. It you have the Super Expansion Board and Super Mealter the monitor is up and running at the push of a button.

Other on board options include Parallal Input and Output Ports with full handstake. They allow easy Compact Ports with as in handscares They allow was connection of an ASCII keyboard to the input port. R8 232 and 20 ma Current Loop for teletype or other device are on board and if you need more memory there are two 8-180 slots for static RAM. video boards. Also a 1K Super Moni 2 with video driver for his capability display with Tiny Basic and a wideo wiercace board Parallel I/O Ports \$9.85, RS 232 \$4.50, TTY 20 ma I/F VU FORTS \$9.65, RS 232 \$4.50, TTY 20 ma I/F \$1.95, \$-100 \$4.50, A 50 pin conanctor sat with ribbon cable is available at \$16.85 for easy con-nection between the Super Elf and the Super Expansion Board.

Power Supply Kit for the complete system (see Multi-valt Power Supply below).

#### S-100 DYNAMIC RAM

#### THE EXPANDABLE 1 PRIORITY 1 ELECTRONICS THE EXPANDABLE 1" 64K Dynamic Ram board

provides your S-100 system with 64K of reliable, highspeed dynamic RAM. Compatable with most of the major S-100 systems on the market including those with front panels, it supports DMA operations and requires no Wait states with current microprocessors

User expandable from 16 to 64K Supports DMA Designed to IEEE proposed 5-100 bus standards • 2 or 4 MNz operation • Operates with either an 8080 or 2-80 based S-100 system, providing processor-transparent re-freshes with both Supports IMSAI-type front panels made bank-independent . Fully bullered address and data lines . Fail-sale refresh circuitry for extended Wall

# 2.4 MEGA-BYTE S-100 DUAL 8" DISK COMPUTER SYSTEM

California Computer Systems

#### HERE'S WHAT YOU GET: 2210 MICROCOMPUTER SYSTEM

2 or 4 MHZ operation • Z-80 CPU • 65,536 RS-232-C serial port bytes of dynamic RAM •

Accepts 8" and 51/4" floppy disk drives • 12-slot, colored mainframe Internal installed . CP/M 2.2 (on diskette) Operating System

The Model 2210 Computer System is a 2-80 based system containing 65,536 bytes of dynamic RAM memory and floppy disk controller mounted in a 12 slot maintrame. The system is ideally suited for applications where user defined peripheral devices are to be used and a high degree of system liexibility and expandability is desirable

The system components are the Models 2810 CPU, 2065 64K Byte Memory Module, 2422 Floppy Disk Controller and 2200 Maintrame. Also included in the system are internal cables interconnecting the DPU serial channel, disk controller 8" disk channel and disk controller 514" disk channel to the maintrame back panel. This permits connecting user peripherals directly to the system without the need of opening the mainframe.

Of the 12 slots available in the mainframe, only three are used for the basic system components, 9 slots are available for user options or other CCS products such as memory (expandable up to 512K bytes (serial and parallel I/O boards).

System software is provided using the CCS version of the CP/M Operating System, Version 2.2. The system is totally linked to permit auto-boot start-up with the CP/M on diskette.

The system is completely integrated and tested prior to shipment from CCS to assure proper configuration and system integrity.

# HARD DISK FOR LESS THAN FLOPPIES

# DISCUS M5 by MORROW DESIGNS PRIORITY OF ELECTRONICS INTRODUCTORY PRICE: \$1995.00

PRIORITY I ELECTRONICS is pleased to announce Morrow Designs' DISCUS M5, the lowest cost 5 megabyte Winchester sub-system and the fastest. Now you can afford a hard disk for the price of flopples, Morrow Designs is the largest supplier of hard disk sub-systems to the S-100 market. With the new DMA Hard Disk Controller and the ST506 mini-Winchester drive, Morrow has altained speeds over 600,000 bytes per second.

As with all Morrow Designs' systems, Morrow delivers if complete. Drive, controller, cabinet, power supply, lan, transformer, cables, CP/M 2.2" operating system, Microsoft" Basic 80 and a ninety day warranty.

The DISCUS M5 regularly sells for \$2495.00. Priority 1 Electronics is proud to offerthe DISCUS M5 for a limited time at only \$1995.00. Winchester speed, 5Mb capacity and reliability for only \$1995.00. Three additional drives may be daisy-chained to the controller for future expansion. Perfect to back up each other at the end of each day. Takes seconds, is more reliable than tape and with the outside lock can be unplugged and removed (after the locking screw has been put in place.)

A few facts about the ST506 drive which is being used in the Discus M5

#### **Key Features**

- Storage Capacity of 6.38 megabytes unformatted, 5.0 megabytes formatted as shipped
- Winchester design reliability, 9.5 gram head load force, 19 micro-inch flying height
- Same physical size and mounting as the minifloopy
- · Same DC voltages as the minifloppy
- Band actuator and stepper motor head positioning
- 5.0 megabit/second transfer rate
- Same track capacity as a double density 8 inchilloppy
- 170 millisecond random average access time, reduceable to 95 ms via a simple software algorithm

This is the hard disk controller that the S-100 bus has been waiting for Please allow us to introduce you!

#### A few interesting facts

 The only single S-100 DMA Hard disk controlter board on the market today

CPM is a rugistored Tradumark of Digital Research.

- Fully compatable with high speed 6MHz and 8 MHz CPUs of today and tomorrow
- DMA bus arbitration as outlined by the IEEE 896 standard
- Controls 1 to 4 soll sectored Winchester drives
- Supports both 5%" and 8" drives.
- ST506 or SA 1000 interface compatable
- Variable sector length (256, 512, 1024, or 2048 byte sectors)
- · Automatic CRC generation and checking
- Addresses 1 to 16 heads
- Addresses an infinite number of tracks
- Contains its own on-board microprocessor
- 24-bit address burst DMA Iransfers
- · Channel driven
- All disk driver routines resident on the controller
- Variable format
- No buffering required
- Maximum transfer rate 5,000,000 bits per second

#### Pure Speed

The speed of this Winchester controller is enhanced by Morrow's channel driven concept. This DMA hard disk controller (DMAHDC) picks up its commands from the host processor yia memory on the system bus. The host processor writes commands into memory and then picks them up during DMA cycles from this memory. The channel, commands and transfers may be located anywhere in the 24-bit address range. At the completion of the command, the controller returns appropriate status and can generate an interrupt. Commands may be chained together by the CPU to allow the controller to execute many commands in succession, generating an interrupt at the end of each command and/or at the end of the completed command chain.

#### Communications

An imbedded microprocessor enables the user to easily communicate with this inteffigent device. All low level disk drive routines are resident on the controller itself.

These include:

formal seek read a he

read a header read a sector write a sector

Circle 318 on Inquiry card.

return status sel DMA address sel channel address Variable sector lengths are available. On Morrow Designs system products 512 byte sector lengths are standard. This is being done to maximize the capacities available on current drive units but may be varied by independent system integrators when desired.

The DMAHDC has been designed for expansion. One to four drives can be attached directly and controlled. One to sixteen drive heads may be addressed. Any number of tracks may be specified during the seek routine by specifying one to two hundred and fitty-six tracks one or more times. Each of the expansion abilities prepare the user to upgrade his system as technology advances to additional platters and tracks.

The controller has no peer today in the S-100 bus market.

Until now, if you wanted a 50MHz or 100MHz dual trace oscilloscope of uncompromising quality, there was only one choice. Now there is a second...outstanding new delay sweep with an established name — the Hitachi V550B and the V1050.

The HITACHI V550B (50MHz) and V1050 (100MHz) offer all the capabilities you might demand from a lab grade oscilloscope. Capabilities such as a max. sweep rate of 2ns/div (V1050) 5ns/div V550B). Also features you may not expect, like sensitivity of 1 mv/div (V550B) .5mv/div (V1050) @ 10MHz, automatic focus correction, and a built-in TV sync separator circuit.

The cost? Remarkably reasonable, expecially when you compare it to the other leading 50MHz or PRIORITY

SHC 200, 64K ExpandoRAM II, Versafloppy II, CP M 2.1

# \$1095.00

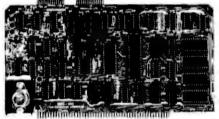

4 MHz Z-80A CPU, 64K RAM, serial I/O port, parallel I/O port, double-density disk controller, CP/M 2.2 disk and manuals, system monitor, control and diagnostic software.

Add \$100.00 for upgrade to ExpandoRAM III 64K (expandable to 256K)

-All boards are assembled and tested-

#### **SBC-200**

2 or 4 MHz single board computer

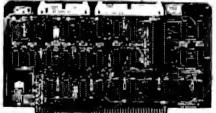

• S-100 hus compatible • Powerful 4MHz Z-80A CPU • Synchronous 'asynchronous serial 1/O port with RS-232 interface and software programmable baud rates up to 9600 baud • Parallel input and parallel output port • Four channel counter/timer • Four maskable, vectored interrupt inputs and a non-maskable interrupt • IK of on-board RAM • Up to 32K of on-board ROM • System monitor PROM included

The SRC-200 is an excellent CPU board to base a microcomputer system around. With on-board RAM, ROM, and 1/O, the SBC-200 allows you to build a powerful three-board system that has the same features found in most five-board microcomputers. The SBC-200 is compatible with both single-user and multi-user systems.

CPU-30200A A & Twith monitor \$299.

# Versafloppy II

54" & 8" double density controller

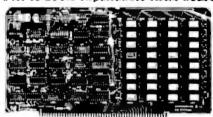

• S-100 has compatible • IRM 3740 compatible soft sectored format • Controls single and double-sided drives, single or double density, 5¼" and 8" drives in any combination of four simultaneously • Drive select and side select circuitry • Analog phase-locked loop data seperator • Vectored interrupt operation optional • Standard CP/M 2.2 disk operating • Control/diagnostic software PROM included

The Versafloppy II is faster, more stable and more talerant of hit shift and "jitter" than most controllers. All control and diagnostic software included.

10D-1160A A & T . . . . . . . . . \$359.95 For CP M 2.2 and manual set add . . . \$99.95

#### **ExpandoRAM III**

64K to 256K expandable RAM hoard

SI) Systems has duplicated the famous reliability of their ExpandoRAM I and II hoards in the new ExpandoRAM III, a board capable of containing 256K of high speed RAM. Utilizing the new 64K x I dymanic RAM chips, you can configure a memory of 64K, 128K 192K, or 256K, all on one S-100 board. Memory address decoding is done by a programmed bipolar ROM so that the memory map may be dip-switch configured to work with either COSMOS MPM type systems or with OASIS-type systems.

Extensive application notes concerning how to operate the ExpandoRAM III with Cromemco, Intersystems, and other popular 4 MHz Z-80 systems are contained in the manual.

## Multi-User System

SBC-200, 256K ExpanduRAM III, Versaftoppy II, MPC-4 COSMOS Multi User Operating System, C BASIC II

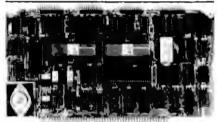

\$1995.00

Two Z-80A CPUs (4 MHz), 256K RAM, 5 serial I/O ports with independently programmable band rates and vectored interrupts, parallel input port, 8 counter-timer channels, real time clork, single and double sided single or double density disk controller for 5½" and 8" drives, up to 36K of on-board ROM, CP/M 2.2 compatible COSMOS interrupt driven multi-user disk operating system, allows up to 8 users to run independent jobs concurrently, C BASIC II, control and diagnostic software in PROM included.

-All boards are assembled and tested-

#### MPC-4

Intelligent communications interface

• Four buffered serial I-O ports • On-board Z-80A processor • Four CTC channels • Independently programmable baud rates • Vectored interrupt capability • Up to 4K of onboard PROM • Up to 2K of on-board RAM • Onboard firmware

This is not just another four-port serial 1/O board! The on-hoard processor and firmware provide sufficient intelligence to allow the MPC 4 to hundle time consuming I O tasks, rather than loading down your CPU. To increase overall officiency, each serial channel has an 80 character input buffer and a 128 character output buffer. The on-board firmware can be modified to make the board SDLC or BISYNC compatible. In combination with SD's COSMOS operating system (which is included with the MPC-4), this board makes a perfect building block for a multiuser system.

101-1504A A & T with COSMOS ... \$495.00

# THE WAVE MATE " ELLLET - (SBC)" is the STATE-OF-THE-ART Single Board Computer.

Never before has there been so much technology contained on ONLY ONE Single Board Computer.

Standard size 8 x 10.7 inches

#### COMPARE THESE FEATURES:

- 4 MHz Z-80A CPU
- 128 K byte RAM with bank select
- Single/Double density floppy disk controller for both 5¼ inch and 8 inch drives
   DMA floppy disk operation with optional high speed RAM track buffer
   General purpose external DMA I/O

  - 2 serial ports with transmission rates to 38.4 K baud with optional DMA operation
  - Centronics printer port with optional DMA operation
- Hard disk interface with optional DMA operation
- Vectored interrupts
- Real time clock
- 5 volts only

THE WAVE MATE ENHANCED C-BIOS PROVIDES SEVERAL POWERFUL ADDITIONS TO THE INDUSTRY STANDARD **OPERATING SYSTEM. THESE ARE AS FOLLOWS:** 

- Optimized disk track interlacing
- Full disk track buffering
- Keyboard type-aheadOptional multi-user operation
- Disk write verification
- Real time clock
- Various soft sectored mini floppy diskette formats

ONLY \$995.00

single quantity price includes WAVE MATE'S enhanced C-BIOS

The Wave Mate "BULLET," fast, compact and powerful, is a completely integrated Z-80A, CP/M based microcomputer system packed in an attractive dual mini floppy drive enclosure. Connect any serial terminal and Centronics compatible printer and you are in business with an unbeatable PRICE/PERFORMANCE ratio.

#### JE215 Adjustable Dual Power Supply

General Description: The JE215 is a Dual Power Supply with independent adjustable positive and nega-tive output voltages. A separate adjustment for each of the supplies provides the user unlimited applications for IC current voltage requirements. The supply can also be used as a general all-purpose variable power

- \* a general eli-purpose variable power

  \* EATURES\*

  \* Adjustable repolated power supplies,
  pot end regs 1,2VDC to 19VDC.

  \* Fower Output leach supply:
  \* SOUCE 9500mA, 10VDC # 750mA,
  12VDC # 550mA, and
  15VDC # 17bmA

  \* Twe, I terminal act, IC regulators
  with thermal serviced protostion

  \* Heat sink regulator coping

  \* LED "on" molicator

  \* Finited Seard Construction

  \* Size, 3 1/3" was 5 1/18" La 3" M

  \* Size, 3 1/3" was 5 1/18" La 3" M

FOR SALE: 16-column calculator printer. Works, but vitie documentation, \$25 plus shipping (5 positions). Flex keypad and display, obviously homemade: \$20. Fifty Tri-state bipolar ROMS that decode and drive eight 5-100 signats directly from 280. No external buffering necessary. Derives shiEMR, MWRT, sINP, SOUT, psyNC, INTA, sWO, and ptWR, 56 each, Mark Deribick, 7 Fratering Row, St. Louis, MO, 63130, 1314), 721-7093.

FOR SALE: Heath H-89 alian-one microcomputer. Built in July 1981. Floppy-disk drive, 48 K programmable memory, cassene interface. HDOS 2 0 DOS, Microsoft and 8H 8ASIC 15 disks of club programs, and all documentation 53000 value for \$1700. Also have Heath ET-3400 trainer. EE-3401 microprocessor self-instruction course, and final exam, \$195 Will pay shipping in U.S. Gary Bagby, 2520 Chidds Rd., Omaha, NE 68147, (402) 731-1871.

FOR SALE: Onio Scientific Challenger III (Model C3-51) with three processors (6502A, 6880D, 280A) and 56 K memory Double-sided 8-inch Roppies for 1.2 megabytes storage CPRM operating system with FORTRAN and COBOL compilers Mariuals and documentation included: 54800 Ron Hopson, POB 7929 (N173), Philisologhia, PA 1910). FOR SALE: Interac computer—not used, still in the package With 16 K RAM, 2 K ROM, cassette, 1500 bps, eight colors, and sound, 5284 Write for more details Steve Buhk, 109 East Kentucky Ave., Detand, FL 32720.

FOR SALE: Centronics 730 pointer, same as Radio Shack Lineprinter II, New, only tested. Full documentation. Estra ribbons \$600 UPS COD. D. Dingley. 417 Liberty St., Paintesville. OH 44077, 12161 351-6759.

FOR SALE: SSM CB1A 8080 5-100 processor board with 1-k RAM, 2-K-video monitor in ROM, and parallel MO port. Assembled and tested Virtually unused \$125 Craig Cline, 40 Cregition 5t. Cambridge, MA 02140, (617) 661-3966

FOR SALE: Linear programming package for Hewlett-Packard 9835 computer Complete package consisting of manual and three carnidges in binder Originally cost 450 and used only a couple of times. Will self for 5125 or exchange for HP-85 software Pacs I don't have Will also consider MP-85 ROMs C.J. Kanak. POB 28206. Tempe AZ 85282 [602] 988-6542.

FOR SALE: Apple if writh 64 K Pascar language system, two disk drives, software, and other accessories, \$2000. Zenith 2/9 central acceptance, \$2000. Hearn H-14 printer, assembled, \$500. At items in good working order. Thorhas McDorinell, 1738 Orchard Dr., Canton, MI 48188, [313] 326-3047 weekends or after 6 p m weekdays.

FOR \$ALE: Texas instruments 71-745. Like new. Under constant maintenance by TI. Must self. Asking \$1000 or best offer D.P. Apt. 25102 First Lane, Southfield, MI 48034.

FOR SALE: TEC V-300 dasy-wheel printer Brand new Bidirectional printing at 25 cps/136 print positions white Proportional spacing. 1/20-inch horizontal and 1/46-inch vertical Centronics parallel interface. Listed at \$1595, will sell for \$1000 FOB R.G. Lathrop, 810 Rush Court. Chico, CA 95926, (916) 343-7098.

FOR SALE OR SWAP; TRS-80.4 K Color Computer past of joyancks, and three cannotes of games. Will send in prignal carton via U.P.S. 5375 or will swap for a Model (mint-disk drive Jack Listiey, 360 Mar Rd., Gien Burnie, MD 210a.)

#### Ciarcia Wins BOMB by Remote Control

Steve Clarcia's project on using your computer for remote control earned him first place in the December BOMB contest. Now if we could only send him the \$100 cash prize by remote control. Senior editor Gregg Williams took second place with his photo essay. "The Coinless Arcade." Though Gregg is a gamesman, he's not a gambler and when playing video games he can't afford to lose because as a staff member he is ineligible for the second-place \$50 prize. Third place went to William Barden Jr.'s "Color Computer from A to D. Make Your Color Computer 'See' and 'Feel' Better." the first installment in a series devoted to Radio Shack's TRS-80 Model I. Model III, and Color Computer.

**UNCLASSIFIED POLICY:** Readers who are soliciting or giving advice, or who have equipment to buy, sell or swap should send in a clearly typed notice to that effect. To be considered for publication, an advertisement must be clearly noncommercial, typed double spaced on plain white paper, contain 75 words or less, and include complete name and address information.

These notices are free of charge and will be printed one time only on a space available basis. Notices can be accepted from individuals or bona fide computer users clubs only. We can engage in no correspondence on these and your confirmation of placement is appearance in an issue of BYTE.

Please note that it may take three or four months for an ad to appear in the magazine.

# REMEMBER.

Elephant™ floppies.

They're guaranteed to meet or beat every industry standard for quality. They come standard with reinforced hub rings at no extra cost. They come in every popular 51/4"model, in both hard and

soft sector. And they sell at some of the lowest prices in the business.
Elephant Flexible Disks.

They're heavy duty. They work for peanuts. They never farget. Get yourself a trunkful.

# **HEAVY DUTY DISKS.**

# Get More Than Just a Computer! Get Radio Shack's TRS-80 Model II Multi-Purpose Workstation.

**Bi-Sync Communication** 

Radio Shack's top-of-the-line TRS-80® Model II is more than a computer. It's a versatile, stand-alone system that's the heart of a multi-purpose workstation. You can use the Model II by itself, or with a printer and other peripherals to accomplish a wide variety of tasks.

Professional Business Applications. A complete Model II business system has the storage capacity and expandability to streamline your accounting, inventory control, order entry, and many other tasks. We also have ready-to-run software for legal, medical, and other specialized applications. Best of all, every Radio Shack software program can be put to work without formal operator training, thanks to our easy-to-understand documentation.

Management Assistant. The TRS-80 Model II is also for managers. It can help with planning and modeling, word processing, electronic filing, statistical analysis, and much more. You can do jobs that are too "hot" to wait for shared computer time or too small for cost-effective handling by your company's mainframe. Putting a Model II by your desk is one of the easiest ways to boost your personal productivity.

Program Development. To meet your specific requirements, Radio Shack offers you a choice of Model II programming languages. We have BASIC interpreter and compiler, COBOL, FORTRAN and ASSEMBLER. In addition, Model II's sophisticated Disk Operating System has many powerful features, yet it's easy to use. It gives you a full set of library commands, utility programs and useful system routines that can be called directly by user programs.

Bi-Sync Communications. The TRS-80 Model II is ideal for use in existing data processing operations because it offers the versatility that a mere terminal lacks. With our bi-sync communications packages, Model II provides low-cost access to large main-frame computers. With our exclusive TRS-80 VIDEO-TEX software, you can also access data base networks and information services.

It's Affordable. Model II systems start as low as \$3899. Let us show you what the TRS-80 Model II can do for you! Drop by a Radio Shack Computer Center or the expanded computer department of selected Radio Shack stores and dealers nationwide for a personal demonstration.
