## 10679 I Love Strings!!!

Hmmmmmm $\qquad$ strings again :) Then it must be an easy task for you. Well ...you are given with a string $S$ of length not more than 100,000 (only ' $a$ ' -z ' and ' A '- Z '). Then follows $q(~ q<1000)$ queries where each query contains a string $T$ of maximum length 1,000 (also contains only ' $a$ '- ' $z$ ' and ' $A$ ' ' ${ }^{\prime}$ ' '). You have to determine whether or not $T$ is a sub-string of $S$.

## Input

First line contains an integer $k(k<10)$ telling the number of test cases to follow. Each test case begins with $S$. It is followed by $q$. After this line there are $q$ lines each of which has a string $T$ as defined before.

## Output

For each query print ' y ' if it is a sub-string of $S$ or ' n ' otherwise followed by a new line. See the sample output below.

## Sample Input

2
abcdefghABCDEFGH
2
abc
abAB
xyz
1
xyz

## Sample Output

y
n
y
