## 10689 Yet another Number Sequence

Let's define another number sequence, given by the following function:

$$
\begin{aligned}
f(0) & =a \\
f(1) & =b \\
f(n) & =f(n-1)+f(n-2), \quad n>1
\end{aligned}
$$

When $a=0$ and $b=1$, this sequence gives the Fibonacci Sequence. Changing the values of $a$ and $b$, you can get many different sequences. Given the values of $a, b$, you have to find the last $m$ digits of $f(n)$.

## Input

The first line gives the number of test cases, which is less than 10001. Each test case consists of a single line containing the integers $a b n \mathrm{~m}$. The values of $a$ and $b$ range in $[0,100]$, value of $n$ ranges in $[0,1000000000]$ and value of $m$ ranges in $[1,4]$.

## Output

For each test case, print the last $m$ digits of $f(n)$. However, you should NOT print any leading zero.

## Sample Input

4
01113
01424
01224
01214

## Sample Output

89
4296
7711
946
