## 10690 Expression Again

You are given an algebraic expression of the form $\left(x_{1}+x_{2}+x_{3}+\ldots+x_{n}\right) *\left(y_{1}+y_{2}+\ldots+y_{m}\right)$ and $(n+m)$ integers. You have to find the maximum and minimum value of the expression using the given integers. For example if you are given $\left(x_{1}+x_{2}\right) *\left(y_{1}+y_{2}\right)$ and you are given $1,2,3$ and 4 . Then maximum value is $(1+4) *(2+3)=25$ where as minimum value is $(4+3) *(2+1)=21$.

## Input

Each input set starts with two positive integers $N, M(<51)$. Next line follows $(N+M)$ integers which are in the range of -50 to 50 . Input is terminated by end of file. There will be atmost 110 testcases.

## Output

Output is one line for each case, maximum value followed by minimum value.

## Sample Input

22
1234
31
1234
22
2222

## Sample Output

2521
249
1616
