

## 11488 Hyper Prefix Sets

Prefix goodness of a set string is length of longest common prefix\*number of strings in the set. For example the prefix goodness of the set {000,001,0011} is 6. You are given a set of binary strings. Find the maximum prefix goodness among all possible subsets of these binary strings.

### Input

First line of the input contains  $T$  ( $\leq 20$ ) the number of test cases. Each of the test cases start with  $n$  ( $\leq 50000$ ) the number of strings. Each of the next  $n$  lines contains a string containing only '0' and '1'. Maximum length of each of these string is 200.

### Output

For each test case output the maximum prefix goodness among all possible subsets of  $n$  binary strings.

### Sample Input

```
4
4
0000
0001
10101
010
2
