## 1225 Digit Counting

Trung is bored with his mathematics homeworks. He takes a piece of chalk and starts writing a sequence of consecutive integers starting with 1 to $N(1<N<10000)$. After that, he counts the number of times each digit ( 0 to 9 ) appears in the sequence. For example, with $N=13$, the sequence is:

$$
12345678910111213
$$

In this sequence, 0 appears once, 1 appears 6 times, 2 appears 2 times, 3 appears 3 times, and each digit from 4 to 9 appears once. After playing for a while, Trung gets bored again. He now wants to write a program to do this for him. Your task is to help him with writing this program.

## Input

The input file consists of several data sets. The first line of the input file contains the number of data sets which is a positive integer and is not bigger than 20 . The following lines describe the data sets.

For each test case, there is one single line containing the number $N$.

## Output

For each test case, write sequentially in one line the number of digit $0,1, \ldots 9$ separated by a space.

## Sample Input

2
3
13

## Sample Output

```
0 111 0 0 0 0 0 0
1622111111
```
