## 503 Parallelepiped walk

Two points $A\left(x_{1}, y_{1}, z_{1}\right)$ and $B\left(x_{2}, y_{2}, z_{2}\right)$ are placed on the surface of parallelepiped $P=\{(x, y, z): 0 \leq x \leq L, 0 \leq$ $y \leq W, 0 \leq z \leq H\}$ with $L * W * H$ dimensions (see figure). These two points can be linked with various curves lying on the surface of $P$. You are to find out the square of the shortest curve length.

Parallelepiped dimensions $L, W, H$ and coordinates of the points are integers, $0 \leq L, W, H \leq 1000$.

## Input

The input data file consists of a series of lines with each line containing 9 integers (in indicated order):
 $L, W, H, x_{1}, y_{1}, z_{1}, x_{2}, y_{2}, z_{2}$. The numbers are separated with spaces.

## Output

For each line of input there will be one line of output, which should contain the square of the shortest curve length between points $A$ and $B$ on the surface of $P$.

## Sample Input

```
552312 3 5 0
300 600 900 300 550 0 0 550 900
```

## Sample Output

36
